Secure Cloud Management Platform

• **Cloud Management Platform** (15 Dec 2025 - 09.00) - Secure Cloud Management Platform

NON CLASSIFICATO

Installation and Deploy

Getting Started

The Secure Cloud Management Platform solution, in line with Gartner's definition indicated in the Reference Documents, is an operational platform that enables the governance, lifecycle management, brokering, and automation of resources managed in a cloud environment.

Requirements

The SCMP solution is designed to run exclusively in Kubernetes environments compliant with the supported versions indicated in the section Supported Kubernetes Versions.

Installation requires the availability of an existing Kubernetes cluster (upstream or managed service) or OpenShift Container Platform, equipped with the necessary resources to host the platform's core components.

In OpenShift environments, it is possible to leverage the benefits of Red Hat certified operators. Alternatively, it is possible to use upstream or managed Kubernetes clusters (EKS, AKS, GKE) with Helm v3.

Recommended Sizing

To ensure optimal performance, it is recommended that the Kubernetes cluster has nodes with the following minimum characteristics:

| Type | Role | #qty | vCPU | Memory (GB) | Disk (GB) | Notes |
|------|---------------|------|------|-------------|-----------|---|
| Node | Control Plane | 3 | 8 | 16 | 128 | Respect native Kubernetes HA |
| Node | Infra | 3 | 12 | 24 | 628 | For ingress, logging, monitoring services |
| Node | Worker | 4 | 8 | 32 | 128 | For SCMP modules and user workloads |

 **Note:** Node quantities and sizes may vary based on environment size, number of SCMP modules installed, and workloads to be managed.

Other Requirements

- **Helm v3** installed and configured.
- Access to Helm repositories and container registries indicated in the next section.
- Outbound network connectivity (port 443) to the Internet and APIs/consoles of supported cloud providers.
- Persistent Storage available via `StorageClass` compatible with Kubernetes `PersistentVolumeClaim` (NFS, Ceph, Portworx, EBS, Azure Disk, etc.).

The SCMP platform is supported on Kubernetes and OpenShift in the following versions:

| Platform | Supported Version(s) | Notes |
|--|----------------------|--|
| OpenShift Container Platform (OCP) | ≥ 4.14 | Recommended to use versions ≥ 4.14 to ensure compatibility with certified operators |
| Kubernetes Upstream | ≥ 1.25 | Supported with Helm v3; recommended to use versions ≥ 1.26 |
| Amazon EKS (Elastic Kubernetes Service) | ≥ 1.25 | Validated support for managed EKS environments |
| Azure AKS (Azure Kubernetes Service) | ≥ 1.25 | Validated for managed AKS environments |
| Google GKE (Google Kubernetes Engine) | ≥ 1.25 | Validated for managed GKE environments |

To perform the installation correctly, access to the following repositories is required:

- Repository Leonardo
- repository charts k8s

Furthermore, it is necessary to verify that the environment can make requests to the consoles and APIs provided by the providers that will be used.

Storage Considerations

Network Connectivity

Components

In this section, we define all the components necessary for the SCMP to function. The "required" elements must be installed before the various SCMP modules as explained in the "Installation" section.

PREREQUISITES

- Nginx Ingress Controller
- Cert Manager
- Minio Operator
- Strimzi Operator
- MongoDB Operator
- Vault AutoUnseal

**MODULES****Common Ports & Requirements****Communication Data**

To update data, the SCMP uses a series of cron-jobs, divided by reference provider and relevant module. Specifically, we can identify:

| Type | Launched every | Activity performed |
|------------|----------------|--|
| Inventory | 1 hour | Retrieves all inventory resources available on the provider |
| Costs | 24 hours | Retrieves costs for the last 2 days for resources available on the provider (multiple days are retrieved to validate data) |
| Monitoring | 24 hours | Retrieves monitoring information for the provider's resources |
| Catalog | 24 hours | Retrieves catalog resources/SKUs from the provider, allowing their use in the SCMP |
| Security | 24 hours | Retrieves compliance and security information for available providers |

Supported Locales

Currently, the languages supported by SCMP are:

- Italian
- English

It is possible to change the language used by following these steps

Installation

In this section, you can find the order and the necessary steps to perform a complete and functional installation.

Installation Overview

1. Log in to the necessary Helm registries using this code: `helm registry login leonardocharts.azurecr.io --username leonardocharts --password $PASSWORD`
2. Install the prerequisites

3. Install a MongoDB instance (if not available, "MongoDB Operator" can be used)
4. Configure the necessary parameters for the Leonardo vault-autounseal chart as indicated in the code section.

```
global:
  OpenShift: true
  imagePullSecrets:
    - name: acr-secret-cs
      credentials: # specify the credentials for the image registry if you want to create the pull secret automatically
      - registry: $DOCKER_REGISTRY
        username: $DOCKER_REGISTRY_USERNAME
        password: $DOCKER_REGISTRY_PASSWORD
        email: ignorethis@email.com
    # The `namespace` key is needed by the official Vault chart in order to load the resources in the appropriate namespace
    # and it has to adhere to our naming scheme '<tenant>-<suffix_namespace>'
    namespace: scmp-vault
    tenant: scmp
    suffix_namespace: vault
```

5. Install the newly configured Leonardo vault-Autounseal chart using the code. helm install vault-autounseal vault-autounseal
6. **After the completion of the vault-autounseal installation (i.e., when vault-prod pods are already available in the cluster), configure the SCMP installation parameters as in the code.

```
global:
  tenant: scmp
  imagePullSecrets:
    - name: acr-secret-cs
      credentials: # specify the credentials for the image registry if you want to create the pull secret automatically
      - registry: $DOCKER_REGISTRY
        username: $DOCKER_REGISTRY_USERNAME
        password: $DOCKER_REGISTRY_PASSWORD
        email: ignorethis@email.com
  minio:
    accesskey: "minioadmin"
    password: "minioadmin123!"
```

7. Launch the SCMP installation using the newly modified chart; to launch it, we can use: helm install scmp scmp/

Perform Configurations

After the installation, configuration steps are required, as described in the Appliance Setup section.

Upgrades & Maintenance

Additional Configuration Options

Load Balancer Configuration

Proxies

SSL Certificates

Data Encryption

Initial Appliance Setup

Appliance Setup

Network Configuration

- Enable the ingress controller to expose services on the network.
- (optional) Create a DNS name to facilitate connection to the system.

Keycloak Setup

- Configure Realm theme on Keycloak
- Create client 'microfe' on Keycloak Realm:
- Enable 'Implicit Flow'
- Set 'Valid Redirect URIs' to:
 - http://localhost:3000/*
 - SCMP host domain

Content Management

- Upload micro frontends in singlespa bucket
- *Alternatively:* Use minio-uploader utility chart
- Upload micro frontends config in singlespa-config bucket
- *Alternatively:* Use minio-uploader utility chart

Access Control

- Set anonymous read-only access on Minio buckets:
- singlespa
- singlespa-config

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

- config
- Configure IAM users and roles, as indicated in the IAM User Creation section.

2 Authentication

The "Authentication" functionality allows interaction with the IAM to modify user profiling.

For preliminary configurations, refer to the specifications indicated in document DI-IPSC-81443, included in the reference documents table.

The menu is accessible from the button at the top right, as shown below.

Specifically, to access user profiling, the menu is "Authentication".

Figura 1 – Access to Authentication functionality

Dashboard view for user profiling:

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows the IAM Dashboard interface. At the top left is the Leonardo logo. The top right displays the date and time: 15 Dec 2025, 09.00. Below the logo, the text "Leonardo Cyber & Security Solutions" and "Secure Cloud Management Platform" are visible. The dashboard is divided into four main sections:

- Entities:** Sub-options include Users, Groups, Roles, Applications, Modules, Components, Features, Fields, Data Filters, and Fields Container. A right-pointing arrow indicates further options.
- Associations:** Sub-options include Feature X User/Group, DataFilter X User/Group, Field X User/Group, and GroupUserTree. A right-pointing arrow indicates further options.
- Validations List:** Sub-options include Validations. A right-pointing arrow indicates further options.
- Administrations:** Sub-options include User Management X Pages, Pages Management, App X User/Group, and Supports. A right-pointing arrow indicates further options.

Figura 2 – IAM Dashboard

2.0.1 Groups

To simplify the assignment of menu attributes and authorizations, user groups can be used. Click the "Groups" menu in the "Entities" section of the IAM dashboard.

This screenshot is similar to Figura 2, showing the IAM Dashboard. However, it includes a red arrow pointing to the "Groups" option within the "Entities" section of the sidebar menu. The rest of the interface and sections are identical to Figura 2.

Figura 3 – Access to Group management

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

Once the link is clicked, the user will be shown the list of all available groups on the portal with their respective configuration buttons.

The screenshot shows a dark-themed web interface for managing groups. At the top, there's a header bar with the Leonardo logo, the date '13.41:36 25 march 2024', and user information 'admin admin English'. Below the header, a navigation bar includes 'Dashboard', 'Entities' (which is highlighted), 'Associations', 'Validations List', and 'Administration'. Under 'Entities', the 'Groups' tab is selected. A large table lists various group names such as 'IamAdministrators', 'CmpTenantsAdmin', 'CmpAdministrator', etc. Each row has an 'Actions' column with icons for search, edit, delete, and more. At the bottom left is a dropdown menu set to '10'. On the right side of the table, there's a search bar labeled 'Search Group' and a '+' button for adding new groups.

Figura 4 – List of configured groups

2.0.1.1 Group Creation

To create a new group within the system, click the "+" button in the top right. A group creation form will be displayed.

This screenshot is identical to Figure 4, showing the list of configured groups. However, a red arrow points to the '+' button located at the top right of the table area, indicating where the user should click to add a new group.

Figura 5 – Adding a new Group

Enter the group name and click the "Add Group" button to add it to the system. Once pressed, the system will take us to the list of available groups where we can find the newly created group.

Figura 6 – Group entry parameters

2.0.1.2 Management of Assigned Users and Attributes

To assign users to a group, from the list of available groups, click the "people" icon on the row corresponding to the group of interest. The user will be redirected to the "Members" page where it is possible to view all users assigned to the group and their basic information.

| Group Name | Actions |
|-----------------------|---------|
| IamAdministrators | |
| CmpTenantsAdmin | |
| CmpAdministrator | |
| CmpViewer | |
| IamUsers | |
| ETD-x2030 | |
| CmpProvisioner | |
| ant_istante_handler | |
| Qualiczer Admin | |
| IamUsersAdministrator | |

Figura 7 – Access to user assignment management

We can add a user to the group by clicking the "+" button at the top right (1). Once pressed, a new row (2) will be created in the list of assigned users where a user can be selected from the list of available users (3).

| User | First Name | Last Name | Username | Email | Actions |
|------------------|------------------|------------------|------------------|----------------------------|---------|
| cmp_tenant_admin | cmp_tenant_admin | cmp_tenant_admin | cmp_tenant_admin | cmp_tenant_admin@email.com | |
| iam_admin | | | | | |
| cmp_admin | | | | | |
| cmp_api_test | | | | | |
| andrea.caruso | | | | | |
| cmp_otp | | | | | |
| expertise_admin | | | | | |
| andrea.buso | | | | | |
| cmn_admin | | | | | |

Figura 8 – Assign a user to the group

Similarly, it is possible to remove users from the group by clicking the "Trash" button corresponding to the user to be removed.

After adding all users to the group, click the "Save" button at the bottom left to save the changes. A save confirmation modal will be displayed.

We can assign attributes to the group that will be automatically used by the assigned users. To do this, select the "Attributes" tab at the top of the page (1), then using the "+" button at the top right (2), it is possible to add an attribute. In the left part, the key must be entered (3) and in the white part on the right, its value must be entered (4). During entry, we will see a dropdown below the field where clicking will allow saving the entered value (5).

Figura 9 – Enter Attributes

Once all necessary attributes have been entered, changes can be saved using the "Save" button at the bottom.

To return to the list of available Groups, click the "Back" button present on each page.

2.0.1.3 Viewing, Modifying, and Deleting a Group

From the list of available Groups, a series of buttons are available for each group:

- "Magnifying glass": allows viewing group information (indicated by a red arrow in the image);
- "Pencil": allows modifying the group's basic information (indicated by a yellow arrow in the image);
- "Trash": allows deleting the group after clicking "confirm" in the displayed modal (indicated by a purple arrow in the image).

The screenshot shows the 'Groups' section of the IAM dashboard. On the left, a list of groups is displayed, including 'IamAdministrators', 'CmpTenantsAdmin', 'CmpAdministrator', 'CmpViewer', 'IamUsers', 'ETD-x2030', 'CmpProvisioner', 'ant_istanze_handler', 'Qualiezer Admin', and 'IamUsersAdministrator'. To the right of each group name is a vertical column of five small icons: a magnifying glass, a pencil, a copy symbol, a trash can, and a refresh symbol. At the top right of the list area, there is a search bar labeled 'Search Group' with a magnifying glass icon. Below the list, there is a button labeled 'EXPORT LIST TO .CSV'.

Figura 10 – Control buttons

2.0.2 Users

For an account to access and use the system, it must be appropriately configured. Below, we will see the process of creating and managing a user within the SCMP using IAM as an access control application.

To access User management, click the "Users" menu in the "Entities" section of the IAM dashboard.

The screenshot shows the Leonardo Secure Cloud Management Platform dashboard. At the top, there is a header with the Leonardo logo, the date '10.30.17 26 march 2024', and user information 'admin admin'. On the right, there are language and settings icons. Below the header, the main menu has tabs: Dashboard, Entities, Associations, Validations List, and Administration. Under 'Entities', there is a sub-menu with options: Entities, Users (which is highlighted with a red box), Groups, Roles, Applications, Modules, Components, Features, Resources, Data Filters, and Resources Container. A red arrow points from the text 'Figura 11 – Access to User management' to the 'Users' button.

Figura 11 – Access to User management

Once the link is clicked, the user will be shown the list of all available groups on the portal with their respective configuration buttons.

The screenshot shows the 'Users' page within the Leonardo Secure Cloud Management Platform. The top navigation bar includes the Leonardo logo, date '10.31.09 26 march 2024', and user information 'admin admin'. The main menu tabs are the same as the dashboard. Below the menu, the sub-menu for 'Entities' is expanded, showing 'Users' selected. The main content area displays a table of users with columns: Username, Last Name, First Name, Email, and Actions. The table lists several users, each with a set of five icons for edit, delete, and other actions. At the bottom of the table, there is a pagination control showing '10' and page numbers '1 2 3'.

| Username | Last Name | First Name | Email | Actions |

Figura 13 – New user creation

The new user creation form will be displayed. Fill in the mandatory fields in the list:

- E-mail: the user's valid e-mail address.
- Username: the username to be used as the account for portal access.
- First Name: User's first name.
- Last Name: User's last name.
- Password: Password of at least 8 characters to be used for access.
- Max concurrent connections: Maximum number of simultaneous connections enabled for the user.
- Default Language: the basic language to be displayed in the system.

The screenshot shows a user interface for creating a new user. At the top, there's a header bar with the Leonardo logo, the date '26 march 2024', and a timestamp '10:34:50'. On the right side of the header are user profile icons and language selection ('English'). Below the header, a navigation menu has 'Entities' selected. The main content area contains several input fields:

- Email:** Input field labeled 'Insert Email'.
- Username:** Input field labeled 'Insert Username'.
- First Name:** Input field labeled 'Insert First Name'.
- Last Name:** Input field labeled 'Insert Last Name'.
- Data access level:** Input field (disabled).
- Organization:** Input field labeled 'Insert Organization'.
- Assigned role:** Input field labeled 'Insert Assigned role'.

Figura 14 – User creation form

Once all mandatory fields are entered, click the "+ Add user" button to complete the entry.

A confirmation message will be displayed, and the page will reset to allow the entry of a new user.

To view the newly created user, return to the page containing the list of users.

2.0.2.2 Role and Attribute Assignment

To manage users, you can click the "Groups" button corresponding to the row of the user to be modified.

| Username | Last Name | First Name | Email | Actions |
|-------------------|-----------|--------------|---|---------|
| iam_admin | admin | admin | iam_admin@gmail.com | |

10 ▾ 1 2 3 ≥

Figura 15 – Access to user
management

Once the button is pressed, the page refreshes to show the "Groups" page where one or more groups can be assigned to or removed from the user.

To add a new group to the user, you must select the group to be assigned to the user in the left section (1) and then, by clicking the "Associate" button in the center of the page (2), the group will automatically move to the right section and the changes will be saved automatically.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. The top navigation bar includes links for Dashboard, Entities, Associations, Validations List, and Administration. Below this, the IAM section is selected, with sub-links for Entities, Associations, and a Group User Tree. The main content area displays the 'Associated Groups for User cmp_api_test'. On the left, a list of groups is shown, with 'CmpTenantsAdmin' checked and highlighted by a red box. On the right, a 'User Groups' section shows 'CmpAdministrator' with a priority of 1. A yellow box highlights the 'Dissocia' button in the center of the page. Red numbers 1 and 2 indicate the sequence of steps: 1 points to the checked group, and 2 points to the 'Dissocia' button.

Figura 16 – Associate a user to the group

Similarly, it is possible to remove the user from the group by first clicking the group to be removed in the right section and then the "Disassociate" button in the center of the page. The changes will be saved automatically.

This screenshot shows the same interface as the previous one, but with a different state. The 'CmpTenantsAdmin' group is now unselected and highlighted by a red box in the 'Associated Groups' list. In the 'User Groups' section on the right, 'CmpTenantsAdmin' is still listed but has a priority of 2. A yellow box highlights the 'Dissocia' button in the center of the page. This visual indicates that the user has been successfully removed from the group.

*Figura 17 – Disassociate a user from
the group*

Furthermore, using the buttons in the right section, corresponding to each group, it is possible to modify the priority of the various groups.

For users, it is also possible to assign custom attributes. To do this, select the "Attributes" tab at the top of the page (1), then using the "+" button at the top right (2), it is possible to add an attribute. In the left part, the key must be entered (3) and in the white part on the right, its value must be entered (4). During entry, we will see a dropdown below the field where clicking will allow saving the entered value (5).

The list of available attributes is in the paragraph.

Figura 18 – Enter Attributes

Once all necessary attributes have been entered, changes can be saved using the "Save" button at the bottom.

2.0.2.3 Credential Reset

As a user administrator, it is possible to reset passwords. To do this, click on the "Credentials" tab displayed at the top of the page. In this tab, you can enter a new password for the user and configure it as "Temporary". The temporary password must be changed by the user after the first login. A password validity period, expressed in days, can also be defined.

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows a dark-themed web interface for managing user credentials. At the top, there's a header with the Leonardo logo, a timestamp (12.01.52), and a date (26 march 2024). Below the header, a navigation bar includes links for Dashboard, Entities, Associations, Validations List, Administration, IAM, and Associations. A sub-menu under Associations shows 'Group User Tree'. The main content area is titled 'Password User cmp_api_test'. It displays a password field with placeholder text 'Temporary' and a checkbox for 'Expiration (days)'. At the bottom of this section is a button labeled 'EDIT PASSWORD'.

*Figura 19 – Modifying the user's
password*

2.0.2.4 Viewing, Modifying, and Deleting a User

From the list of available users, a series of buttons are available for each group:

- "Magnifying glass": allows viewing user info (indicated by a red arrow in the image).
- "Pencil": allows modifying the user's basic information (indicated by a yellow arrow in the image).
- "Trash": allows deleting the user after clicking "confirm" in the displayed modal (indicated by a purple arrow in the image).

The screenshot shows the IAM dashboard with a list of groups on the left. Each group entry has a set of icons for edit, delete, and other actions. A red arrow points to the 'Search Group' input field at the top right of the list area.

| Group Name | Action Icons |
|-----------------------|----------------|
| IamAdministrators | [Edit, Delete] |
| CmpTenantsAdmin | [Edit, Delete] |
| CmpAdministrator | [Edit, Delete] |
| CmpViewer | [Edit, Delete] |
| IamUsers | [Edit, Delete] |

| Qualiezer Admin | [Edit, Delete] |
| IamUsersAdministrator | [Edit, Delete] |

Figura 20 – Control buttons

2.0.3 Management of Menus Enabled per User/Group

The IAM system integrated into the SCMP also allows the management of menu elements available to various users and groups. To access this functionality, simply click the "User management X Pages" link available in the "Administration" section of the IAM dashboard.

The screenshot shows the IAM dashboard with the 'Administration' section selected. A red arrow points to the 'User Management X Pages' link under the 'Administrations' category.

- Entities:**
 - Users
 - Groups
 - Roles
 - Applications
 - Modules
 - Components
 - Features
 - Resources
 - Data Filters
 - Resources Container
- Associations:**
 - Feature X User/Group
 - Datafilter X User/Group
 - Resources X User/Group
- Validations List:**
 - Validations
- Administrations:**
 - User Management X Pages
 - Pages Management
 - App X User/Group
 - Supports

Figura 21 – Access to menu management

At the top of the page, there are two dropdown menus: the left dropdown allows selecting a single user, and the right one allows selecting a group.

Figura 22 – Selection of user/group to modify

After selecting an account, the page will update to show all "STREAM" available on the application. It is possible to click the "+" button corresponding to each row to view the available "MODULES" and "COMPONENT".

The displayed component lists are automatically generated by the system using the configurations performed during installation.

For each component present, by clicking the dropdown menu on the corresponding row, it is possible to indicate its visibility (or lack thereof) to the user/group we previously selected.

The selectable values are:

- Enabled and default: only one default can be indicated per module. Selecting this option makes the selected page the main one; thus, upon clicking the menu, the user will be redirected to this page.
- Enabled: Indicates that the menu is visible and usable by the user/group.
- Disabled: Indicates that the menu will not be enabled and will not be visible to the user/group.

- N.D: not defined (the menu is disabled and will not be visible).

Figura 23 – Menu authorization management

2.0.4 User Profile Lists and Attributes

This section highlights the different types of users who can access and use the described product.

For each of them, a list of functionalities the user has been enabled for and can interact with is provided.

All attributes that can be assigned to Users and Groups are also indicated here.

2.0.4.1 Attributes

| Attribute | Acceptable Values | Type | Description |
|------------|---------------------|--------------|--|
| Monitoring | Default, AS01, mase | String array | Enter the list of enabled tenants for the user, separated by commas between each tenant name. |
| Costs | true / false | Boolean | By enabling the attribute, we specify that the user can perform searches by TAG instead of using the tenant as a discriminant. |

| Attribute | Acceptable Values | Type | Description |
|-----------|-------------------|-------------|--|
| Inventory | ADMIN / LIMITED | Enumeration | By entering ADMIN as the value, the user will be able to view both costs received from the provider and costs calculated by the SCMP. By entering LIMITED, only costs calculated by the SCMP will be viewable. |
| Inventory | Zona1 | String | Mandatory parameter for tools used by IAM. |

2.0.4.2 Administrator

| Functionality | Create | Read | Undo | Delete |
|-----------------------|--------|------|------|--------|
| Monitoring | x | x | x | x |

Tenants

SCMP has been developed as a Multi-Tenant solution, which offers greater security, customization, flexibility, and scalability, with more efficient administration and reduced costs.

To allow the user to manage the tenants present in the infrastructure, the "Tenant" functionality has been made available, a feature not available to everyone but only to users enabled for Service Management.

To access the functionality, click on the bento button in the top left. Afterwards, click on "Tenant".

| Customer | Service Type | Creation Date | Last Update | Status | Phase | Actions |
|----------|--------------|---------------------|---------------------|--------|----------------|---------|
| 840766 | Servizi PSN | 05/03/2024 15:09:27 | 05/03/2024 15:09:27 | New | Deploy Service | |
| 840766 | Servizi PSN | 05/03/2024 15:09:46 | 05/03/2024 15:09:46 | New | Deploy Service | |
| 840766 | Servizi PSN | 05/03/2024 15:10:15 | 05/03/2024 15:10:15 | New | Deploy Service | |

Figura 24 – Access to Tenant
management

Creation of a new tenant

At this point, the user is inside the "Tenant" tab page, which contains the list of tenants configured on the system. To add a new tenant, click the "menu" available in the top right and select the "+ Add" item.

The screenshot shows a 'Tenants List' page with a table of existing tenants. The columns are Tenant ID, Name, and Description. There are three rows: Tenant1 (Name: test, Description: edited), UIPathTenant (Name: test, Description: test), and test (Name: test, Description: test). In the top right corner, there is a red box around a 'Add' button.

Figura 25 – Add new tenant

Once pressed, the new tenant configuration page is displayed, divided into three sections:

The screenshot shows the 'Create tenant' form. It is divided into three main sections:

- A**: Basic Information (highlighted by a yellow box). It includes fields for Tenant ID, Tenant Name, Description, and Marketplace Subscription ID (optional).
- B**: Data persistence (highlighted by a pink box). It shows four persistence levels: Inventory (730), Cost (730), Monitoring (730), and Security (730).
- C**: Init catalog (highlighted by a red box). It includes options for Empty catalog, Copy catalog from default tenant (selected), Copy catalog from another tenant, and a dropdown for Items to copy (Providers, Copy CMP Catalog, Copy Services, Copy Custom Services, Copy Blueprints).

Figura 26 – New tenant creation form

1. General parameters:

| Name | Description | Required |
|-----------------------------|--|----------|
| Tenant ID | Unique ID of the new tenant | x |
| Tenant Name | Name of the tenant that will be displayed to the user | x |
| Description | A description of the tenant | x |
| MarketPlace Subscription ID | the ID received from the Azure marketplace upon service subscription | |

1. Data persistence:

| Name | Description | Required |
|------------|--|----------|
| Inventory | Indicates the number of days for which inventory data will be retained in the collections present in the DB | x |
| Cost | Indicates the number of days for which cost data will be retained in the collections present in the DB | x |
| Monitoring | Indicates the number of days for which monitoring data will be retained in the collections present in the DB | x |
| Security | Indicates the number of days for which security data will be retained in the collections present in the DB | x |

1. Init Catalog

In this section, you can select the catalog items that will be automatically copied to the new tenant.

The initial section (1) allows choosing only one option from:

- Empty Catalog: leave the catalog empty without copying any information.
- Copy Catalog from Default Tenant: indicates that the tenant from which to retrieve information to copy is the Default tenant.
- Copy Catalog from other Tenant: if selected, a new field containing the list of available tenants will be displayed in the section below, allowing the selection of the tenant from which to retrieve information to copy.

Subsequently, you can fill in the next section (2) by entering the non-mandatory fields:

- **Providers:** list of providers configured in the source tenant; selecting one or more providers will copy their catalog items to the new tenant.
- **Copy SCMP Catalog:** if activated, all elements present in the SCMP catalog will be added to the new tenant.
- **Copy Services:** if activated, all elements present in the SCMP catalog will be added to the new tenant.

- **Copy Custom Services:** if activated, custom services available on the tenant will be added to the new tenant.
- **Copy Blueprints:** if activated, all available Blueprints will be added to the new tenant.
- Association Catalog

In this section, you can select the flag to enable the tenant to use the "Common" price lists analyzed later. By selecting this field, it will no longer be necessary to define a specific catalog for the tenant; it will inherit the common price lists.

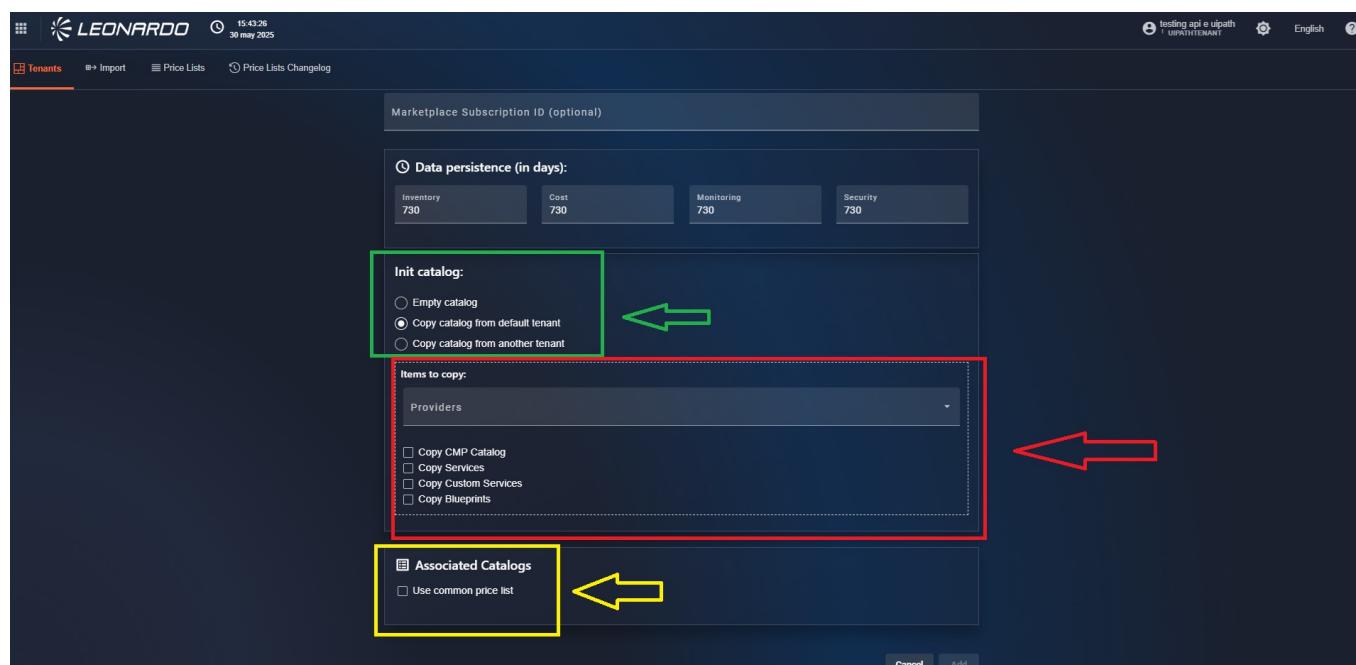

Figura 27 – Catalog initialization section

To confirm the creation of the new tenant, click the "Save" button in the bottom right. After waiting for loading, a creation confirmation message will be displayed, and the user will be returned to the tenant list where the newly created tenant will be present.

Viewing, Modifying, and Deleting a tenant

In the tenant list, next to each result, there is a "menu" with three buttons:

- "Show": allows viewing tenant information (indicated with a red arrow in the image).
- "Edit": allows modifying basic tenant information (indicated with a yellow arrow in the image).
- "Delete": allows deleting the user after clicking "confirm" in the displayed modal (indicated with a purple arrow in the image).

Figura 28 – Control buttons

Automated tenant and subsystem creation

The user is given the possibility to automate the import of tenants and subsystems to speed up "onboarding" operations. To access the functionality, click the "import" tab available at the top of the "Tenants" functionality.

The screenshot shows a dark-themed web interface for managing tenants. At the top, there's a navigation bar with the Leonardo logo, the date '08 april 2025', and some user settings. Below the header, the page title is 'Tenants / Import'. The main content area has a heading 'Import Tenants and/or Subsystems' with a sub-instruction: 'This page allows you to speed up the insertion of tenants and subsystems by importing data through Excel files.' There are two tabs at the top of this section: 'Tenants' (selected) and 'Subsystems'. Below the tabs are two sections: '1. Upload import file' (with a button 'Click here to upload a file') and '2. Configure parameters' (which includes a sub-section for 'Data persistence (in days)' with four fields: Inventory 730, Cost 730, Monitoring 730, and Security 730). At the bottom of the configuration section, there's a 'Init catalog:' section with three radio button options: 'Empty catalog' (selected), 'Copy catalog from default tenant', and 'Copy catalog from another tenant'.

Figura 29 – Tenant import functionality

In the center of the page, there is a contextual menu that allows selecting the import type (Tenant or subsystems).

Let's analyze the 2 pages in detail.

Tenant Import

The functionality consists of 2 sections:

1. The "upload file" section where you can insert a file in .xlsx format (of which an example can be downloaded using the dedicated button) {in red in the figure}
2. The "configuration" section where it is possible to select the parameters shared between tenants (in yellow in the figure), as described in the section (Creation of a new tenant).

Once all information has been entered, you can click the "import" button (in green in the figure) to validate the uploaded file and start the import process.

Import Tenants and/or Subsystems

This page allows you to speed up the insertion of tenants and subsystems by importing data through Excel files.

1. Upload import file (example template here)

Click here to upload a file

2. Configure parameters

① Data persistence (in days):

| | | | |
|------------------|-------------|-------------------|-----------------|
| Inventory 730 | Cost 730 | Monitoring 730 | Security 730 |
|------------------|-------------|-------------------|-----------------|

Init catalog:

- Empty catalog
- Copy catalog from default tenant
- Copy catalog from another tenant

Reset Import

Figura 30 – Tenant configuration

parameters

After a few minutes, you can use the "Results" button (in pink in the image) to view the details of the operations performed by the SCMP.

Figura 31 – Results of performed imports

Subsystem Import

To access the subsystem import functionality, you need to click on the "subsystems" tab available on the "import" page.

The screenshot shows the Leonardo Secure Cloud Management Platform's import interface. At the top, there are tabs for 'Tenants' and 'Import'. The 'Import' tab is selected and highlighted with a red box. Below this, the 'Subsystems' tab is also highlighted with a red box and has an arrow pointing to it from the left. The main area is titled 'Import Tenants and/or Subsystems' and contains instructions: 'This page allows you to speed up the insertion of tenants and subsystems by importing data through Excel files.' There are two main sections: '1. Upload import file' (with a 'Click here to upload a file' button) and '2. Select subsystems provider' (with a dropdown menu showing 'Provider' and 'VCloudDirector'). At the bottom right, there are 'Reset' and 'Import' buttons.

Figura 32 – Subsystem import functionality

The functionality consists of 2 sections:

1. The "upload file" section where you can insert a file in .xlsx format (of which an example can be downloaded using the dedicated button).
2. The selection of the provider type to import.

Once files are inserted and it's verified that the provider is compatible, you can click the "import" button (in green in the figure) to validate the uploaded file and start the import process.

Figura 34 – Results of performed imports

"Common" Catalogs

The user is given the possibility to import a series of catalogs for SKUs or resources, which will then be used by all tenants that have the enabled flag.

To proceed with price list entry, you can access the "Price list" page available on the tenant administration module.

The screenshot shows the Leonardo Tenant Administration interface. At the top, there's a header with the Leonardo logo, a timestamp (15:54:33, 30 may 2025), and a user session indicator (testing api e uppath). Below the header, the main navigation bar includes 'Tenants', 'Import' (with a plus icon), 'Price Lists' (which is highlighted with a red box and has an upward arrow pointing to it), and 'Price Lists Changelog'. The current page is 'Tenants / Price Lists'. There are filtering options at the top: 'Filtering by: TENANT Common to all tenants, YEAR 2025'. Below these filters, there are dropdown menus for 'Tenant' (set to 'Common to all tenants'), 'Provider' (with a note 'This field is required.'), and 'Year' (set to '2025'). A large central area contains the message 'Enter the required filters to view the price lists.'

Figura 35 – Access to catalog import

Once inside the page, to view the data, we can use the "Provider" filter to select the type of provider for which to check the status of price lists.

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with the Leonardo logo, a timestamp (15.58.05, 30 may 2025), and user information (testing api e upath, English). Below the header, the main title is 'Tenants / Price Lists'. The top navigation bar includes links for 'Tenants', 'Import', 'Price Lists' (which is currently selected and highlighted in orange), and 'Price Lists Changelog'. Under the main title, there are three filter buttons: 'PROVIDER AZURE', 'TENANT Common to all tenants', and 'YEAR 2025'. A red box and arrow highlight the 'Provider' dropdown menu, which is set to 'Azure'. To the right of the filters, there are buttons for 'Tenant' (set to 'Common to all tenants') and 'Year' (set to '2025'). Below the filters, there are three small calendar grids for January, February, and March of 2025, each with specific dates highlighted in blue. To the right of the calendar, a section titled 'Current Price Lists:' lists four price lists with their start and end dates: 'Listino Azure con Metriche - 20250109_OnDemand_aprile-middle.xlsx' (01/11/2024 - 30/11/2024), 'Listino Azure con Metriche - 20250109_OnDemand_aprile.xlsx' (01/12/2024 - 31/01/2025), 'Listino Azure con Metriche - 20250109_OnDemand_maggio.xlsx' (01/02/2025 - 31/03/2025), and 'Listino Azure con Metriche - 20250109_OnDemand_marzo.xlsx' (01/04/2025 - 30/04/2025). An 'Inactive Price Lists' section is also visible at the bottom.

Figura 36 – Filter by provider

We can use the other filters on the page to:

- View data for a specific year ("Date" filter)
- View specific catalogs for the selected tenant ("tenant" filter)

To view the data, it is necessary to select only one type of provider, in order to display the calendar and the list of price lists applied for a given year to the specified tenant and/or common.

Inside the page, you will find the list of imported price lists with their validity period. For each row, a color is also indicated; this color helps identify the price list in the graphic section on the left. This calendar facilitates the identification of periods not covered by the price list.

The list of "inactive" price lists that have been previously replaced is also displayed.

Current Price Lists:

| Price List | Start Date | End Date | Actions |
|---|------------|------------|---------|
| Listino Azure con Metriche - 20250109_OnDemand_aprile-middle.xlsx | 01/11/2024 | 30/11/2024 | ⋮ |
| Listino Azure con Metriche - 20250109_OnDemand_aprile.xlsx | 01/12/2024 | 31/01/2025 | ⋮ |
| Listino Azure con Metriche - 20250109_OnDemand_maggio.xlsx | 01/02/2025 | 31/03/2025 | ⋮ |

| az edit 1.xlsx | ⋮ |

Figura 37 – Inactive price lists

New price list entry

To enter a new price list, you need to click the "hamburger menu" available in the top right of the catalog resources page and select "Import Catalogue".

Current Price Lists:

| Price List | Start Date | End Date | Actions |
|---|------------|------------|---------|
| Listino Azure con Metriche - 20250109_OnDemand_aprile-middle.xlsx | 01/11/2024 | 30/11/2024 | ⋮ |
| Listino Azure con Metriche - 20250109_OnDemand_aprile.xlsx | 01/12/2024 | 31/01/2025 | ⋮ |
| Listino Azure con Metriche - 20250109_OnDemand_maggio.xlsx | 01/02/2025 | 31/03/2025 | ⋮ |
| Listino Azure con Metriche - 20250109_OnDemand_marzo.xlsx | 01/04/2025 | 15/07/2025 | ⋮ |
| Listino Azure con Metriche - 20250408_complessivo_tot (1).xlsx | 01/08/2025 | 31/08/2025 | ⋮ |

Figura 38 – Access to "Scheduled Catalog Import"

Three parameters are present in the modal:

- Tenant: select the tenant on which to perform the upload.
- Provider: Select the provider related to the price list to be entered.
- Valid From: it is possible to indicate a start date for the price list's validity. On the day indicated in this variable, the system will automatically update the catalog resources to match the new price list.

If necessary, the user can enter a "common to all tenants" price list which will be used by all configured tenants containing systems from the reference provider.

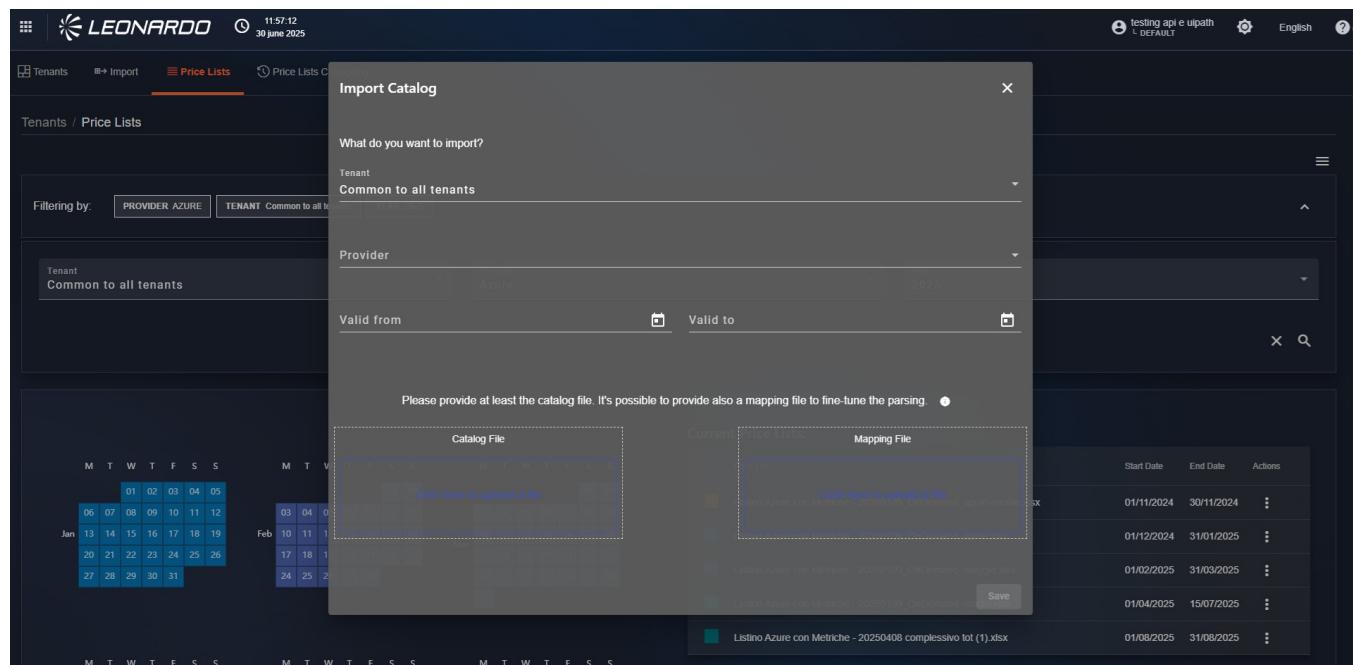

Figura 39 – Required fields for import

Additionally, below the parameters, there are two sections for file upload. By clicking on the first square on the left, you can select an "XLS" file containing all resources to be mapped. By clicking on the second square, you can insert a mapping file, following the information shown in the "Help" section indicated by a "Question Mark" icon. Clicking on it will open a box below the upload sections that contains all information related to the mapping file to be inserted.

Figura 40 – Help message for Mapping file

After entering all parameters, you can click the save button at the bottom, and you will be returned to the previous page which, after the import, will display the new price list.

Modifying validity and deleting price lists

To modify a price list, it is necessary to click the menu corresponding to the table row containing the price list, as indicated in the figure. Subsequently, select the edit item to display the modification mask.

Figura 41 – Edit a price list

Within the window, it is possible to modify the validity date of the price list, either to reduce or extend its duration. If the "Indefinite time" option is selected, the price list will remain valid until a new price list is entered. At that point, the price list with indefinite validity will be automatically deactivated and considered valid until the day the new price list is activated.

After the update, it is necessary to refresh the costs on the involved tenants, in order to correctly calculate the customer price based on the updated price lists.

| Price List | Start Date | End Date | Actions |
|--|------------|------------|---------|
| 50109_OnDemand_aprile-middle.xlsx | 01/11/2024 | 30/11/2024 | ⋮ |

Figura 44 – Error details

Using the filter available on the page, we can view data for only one selected tenant.

Reporting tools

The reporting functionality, specific to features, allows generating global reports of the information available for the various providers. Within the pages, the possibility will also be given to create files to facilitate information sharing.

To access the functionality, above the breadcrumb path, click on the "Reports" tab.

Figura 46 – New report creation

Once the report type is selected, click on the "Configure" button to select the providers to include in the report. In the newly opened window, you will find the "Provider" field that allows selecting one or more pre-existing providers in the system. Subsequently, you can select one or more subsystems to include in the report; if no providers are selected, no subsystems can be selected. Finally, there is a "tag" section to include only resources that have the entered tag.

Secure Cloud Management Platform

Figura 47 – Report configuration

To confirm the creation of a static report, verify that "One-Shot" has been selected for the "Report type" field and click the "Submit" button at the bottom.

After a loading period, the newly generated report will be visible in the list.

The screenshot shows a dark-themed web interface for the Leonardo Secure Cloud Management Platform. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is highlighted with an orange underline. Below the navigation, a breadcrumb path 'Inventory / Reports' is shown, followed by a title 'Reports'. A 'New report' button is located in the top right corner of the main content area. The main content is a table with two tabs: 'Ready' (which is selected) and 'Scheduled'. The 'Ready' tab displays a list of 12 generated reports. Each report entry includes columns for Sub Category (e.g., SUMMARY), Provider (e.g., AZURE, GOOGLE, OPENSHIFT), Creation Date (e.g., 12/06/2024 - 1:21 PM), Status (READY), and Actions (represented by three vertical dots). The table has horizontal and vertical scroll bars at the bottom right.

| Sub Category | Provider | Creation Date | Status | Actions |
|--------------|--------------------------|-----------------------|--------|---------|
| SUMMARY | AZURE, GOOGLE | 12/06/2024 - 1:21 PM | READY | ⋮ |
| SUMMARY | AZURE | 12/06/2024 - 12:29 PM | READY | ⋮ |
| SUMMARY | AZURE | 12/06/2024 - 12:28 PM | READY | ⋮ |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 10/06/2024 - 10:05 AM | READY | ⋮ |

Figura 48 – List of generated reports

4 Administration

The Administration functionality is the starting point for using the SCMP.

The providers configured within this functionality will be used by the system to retrieve all necessary information.

Within this functionality, it will be possible to:

- Configure cloud providers that can be used in the reference Tenant.
- Configure folders for various providers.
- Configure cloud SIEMs for various providers.
- Configure KeyVaults for various providers.
- Configure CommVaults for Backup and Disaster & Recovery for various providers.
- Configure Confidential Computing for various providers.

4.0.1 providers/subsystems

4.0.1.1 List of subsystems

To access the Administration functionality, click the bento button in the top left corner. Then, click "Administration".

Figura 49 – Access to Administration

At this point, the user is on the "Cloud Systems" tab page, where general information about the subsystems can be viewed, such as the reference provider and the subsystem's creation date. It also indicates with a red checkmark if the system is On-Premise.

We can notice that the list contains "folders," which are containers for subsystems. Clicking on the "arrow" corresponding to the folder row displays the subsystems within it and their information.

| Name | Type | Creation Date | On-Premises | Status |
|----------------------------|------------|---------------------|-------------------------------------|--------------------------------------|
| CMP Managed Folder | GOOGLE | 16/12/2024 10:47:16 | <input type="checkbox"/> | ● |
| CMP Managed Azure Folder | AZURE | 16/12/2024 10:48:00 | <input type="checkbox"/> | ● |
| MAE Digital Transformation | AZURE | 16/12/2024 10:48:01 | <input type="checkbox"/> | ● |
| MAE CMP | AZURE | 16/12/2024 10:48:02 | <input type="checkbox"/> | ● |
| MAE OSP 2030 | AZURE | 16/12/2024 10:48:02 | <input type="checkbox"/> | ● |

| CMP-DEV3 CLUSTER | KUBERNETES | 16/12/2024 11:03:34 | <input type="checkbox"/> | ● |
| Cluster 02 | OPENSHIFT | 16/12/2024 11:10:56 | <input type="checkbox"/> | ● |
| VMware VMWareCMP | VMWARE | 16/12/2024 11:11:39 | <input checked="" type="checkbox"/> | ● |
| SA CMP | REDHATEDGE | 16/12/2024 13:00:37 | <input checked="" type="checkbox"/> | ● |

Figura 50 – List of subsystems and folders

Additionally, each subsystem has a status, represented by a colored "LED":

- Green: the subsystem functions correctly in the SCMP "status: ok".
- Red: the subsystem is no longer usable by the SCMP "status: failed".

The SCMP periodically performs connection tests on all configured subsystems. When a subsystem fails this check, its status is updated, and all information retrieval processes (costs, inventory, monitoring, security) are disabled.

This might happen, for example, when the secret or passwords used for connection expire and need to be renewed. By modifying the subsystem, it is possible to insert new connection parameters to re-establish its correct functioning, which will be confirmed by an "OK" status.

4.0.1.1.1 INFORMATION ON SUBSYSTEM CRON-JOBS

Each tenant performs various information retrieval operations for all configured subsystems throughout the day, allowing the user to view all necessary data using only the SCMP.

To view the outcome of these operations, click on the subsystem row and, within the modal, select the "Show discovery info" button.

In addition to the number of operations and their outcome, scrolling down reveals the list and relevant details by clicking the "arrow" next to the operation of interest.

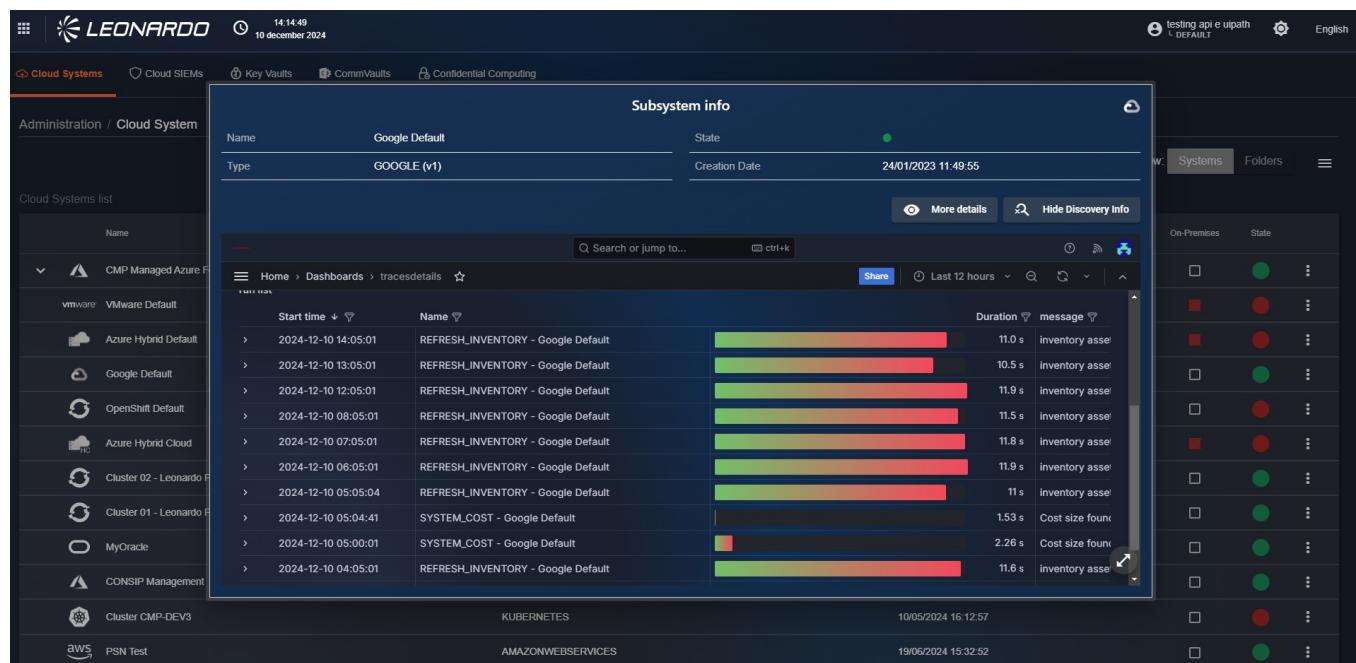

Figura 51 – Information on cron-job

4.0.1.1.2 VIEWING, MODIFYING, AND DELETING A SUBSYSTEM

To view the data of a Cloud Provider, within the list, click on the kebab menu corresponding to the Cloud Provider of interest and click "Show".

*Figura 56 – Starting for the Elimination
of a Cloud Provider*

To delete a Cloud Provider, within the list, click on the kebab menu corresponding to a Cloud Provider, and click "Delete".

The screenshot shows the same list of cloud providers. A modal dialog box is open over the table, asking "Do you really want to delete the system Azure Stack HCI Default?". It has "Cancel" and "Remove" buttons. The "Remove" button is highlighted with a red box and a red arrow pointing to it.

Figura 57 – Confirm deletion of the Cloud Provider

After doing so, a modal will appear where you need to click the "Remove" button.

At this point, the Cloud Provider will no longer be present in the list, and the asset removal flow will be launched on the resource-manager.

4.0.1.1.3 COST MODEL FOR "ON-PREMISE" PROVIDERS

To manage resource usage costs for "On-Premise" providers, the ability to define a specific cost model per subsystem is provided.

The cost model allows configuring both "provider" costs (i.e., those actually incurred) and subsequently applying a discount or markup percentage to be applied to the customer.

Providers that use this functionality are:

- VMWare
- VCloud Director
- RedHat Edge
- OpenShift

To modify the model, click the "three dots" button next to a subsystem and select "Cost model".

| Name | Type | Creation Date | On-Premises | State |
|----------------------------|-----------------------|---------------------|--------------------------|--------------------|
| Azure Folder | AZURE | 09/04/2024 16:45:34 | <input type="checkbox"/> | Green |

Figura 58 – Access to the subsystem cost model

On the model page, we find a first generic section where it will be possible to configure the following fields:

- Currency: the reference currency to be used for the subsystem.
- Discount/Surcharge: a discount or markup percentage to be applied to customer costs.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with the Leonardo logo, the date (07 February 2025), and some user information. Below the navigation, a breadcrumb trail shows 'Administration / Cloud System / Modello Costi'. A modal window is open, titled 'Costs Model: VMWareCMP'. Inside the modal, there's a note about what a rate is and how to calculate on-premises costs. It also mentions discount/surcharge rules. A table lists a single rate for 'Ram' with a price of '0.20 € per GB-h'. At the bottom of the modal, there are 'Reset' and 'Apply' buttons.

Figura 59 – Price model

Subsequently, clicking the "Add rate" button will open a modal where, after choosing a metric (specific to the provider) and its relative unit of measurement, the price to be applied to all elements of the subsystem will be entered. Finally, click the "Save" button to confirm the entry.

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows the 'Add Rate' dialog box open over the main application interface. The dialog box has fields for Description, Metric Type (set to 'Ram'), Unit (set to 'Hourly cost available RAM (GB-h)'), and Price (set to '0,10 € per GB-h'). The main interface shows a table with two rows: 'Ram' and 'Vcpu'. The 'Ram' row has a price of '0,10 € per GB-h' and the 'Vcpu' row has a price of '1,00 € per vCPU-h'.

Figura 60 – Selection of the metric to
be prepared

To confirm the changes to the model after entering all costs for each available component type, click the "Apply" button at the bottom.

The screenshot shows the 'Modello Costi' page after applying the rate. The dialog box is closed, and the main interface shows the updated table with the 'Apply' button visible at the bottom.

Figura 61 – Full cost model

4.0.1.1.4 MANUAL COST UPDATE

The user is given the possibility to perform a manual cost update if needed. This asynchronous operation can be requested individually per subsystem or globally for the entire tenant, which is automatically propagated to all available subsystems.

To request an update for a single subsystem, click the "three dots" button on the subsystem row and select "Refresh Cost".

| Name | Type | Creation Date | On-Premises | State |
|----------------------------|-----------------------|---------------------|-------------------------------------|--------------------------------------|
| CMP Managed Azure Folder | AZURE | 04/10/2024 10:12:37 | <input type="checkbox"/> | ● |
| VMware Default | VMWARE | 04/01/2023 15:14:16 | <input checked="" type="checkbox"/> | ● |

| Cluster 02 - Leonardo PaaS | OPENSHIFT | 16/06/2023 16:42:04 | <input type="checkbox"/> | ● |
| Cluster 01 - Leonardo PaaS | OPENSHIFT | 06/07/2023 19:00:50 | <input type="checkbox"/> | ● |
| MyOracle | ORACLE | 15/12/2023 10:26:25 | <input type="checkbox"/> | ● |
| CONSIP Management | AZURE | 20/03/2024 01:14:18 | <input type="checkbox"/> | ● |
| Cluster CMP-DEV3 | KUBERNETES | 10/05/2024 16:12:57 | <input type="checkbox"/> | ● |
| AWS PSN Test | AMAZONWEBSERVICES | 19/06/2024 15:32:52 | <input type="checkbox"/> | ● |

Figura 62 – Manual cost update

Within the modal, we can specify for how many days, starting from today's date, the costs of the selected subsystem should be re-downloaded and re-confirmed. After confirmation, we can go to the "cron-job Info" section to confirm the operations.

Additionally, it is possible to request a cost update for the entire tenant: by first clicking the "hamburger menu" button available in the top left and selecting "refresh cost", the activity will be distributed across all available subsystems on the page.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Cloud Systems, Cloud SIEMs, Key Vaults, ComVaults, and Confidential Computing. On the right side of the header, there are user profile icons, a language switch to English, and a help icon. Below the header, the main content area is titled 'Administration / Cloud System'. It displays a table of 'Cloud Systems list' with columns for Name, Type, Creation Date, and various status indicators (green, red, grey). A modal window titled 'Refresh Costs' is open over the list, prompting the user to specify a period in days for cost refresh. The 'Refresh' button in this modal is highlighted with a green border.

Figura 63 – Updating costs on all tenant

Once a cost recovery is selected, it is possible to indicate the number of days to recover, and by selecting the "Reset the cost" box, the SCMP will first perform a data cleanup (for the selected range) and then perform the refresh.

This screenshot shows the 'Refresh Costs' dialog box from the previous figure. The dialog has a title 'Refresh Costs' and a sub-instruction 'Please specify the period (in number of days) for which you want to refresh the costs:'. Below this is a text input field labeled 'Number of days' containing the value '1'. Underneath the input field is a checkbox labeled 'Resets the costs of the indicated number of days'. At the bottom of the dialog are two buttons: 'Cancel' and 'Refresh', with 'Refresh' being highlighted with a green border.

Figura 64 – Configuration of refresh

costs

4.0.1.1.5 COST RECOVERY AND CALCULATION PROCESS

4.0.1.1.5.1 Cost recovery structure

The cost recovery process is performed by the "Abstraction Layer" module, which consists of:

- A sub-module of ABS called "layer" for each provider type (e.g., "CMP-ABS-VMWare-layer").
- ABS Gateway: this sub-module manages the communication and standardization of information retrieved from the various Layers of different providers and makes it available to other modules of the SCMP system.

The cost recovery process is performed by a cron-job, which is launched once per provider, automatically during nighttime hours.

For ON-Premise providers, usage values are automatically generated by the SCMP based on the quantity of resources available in inventory, using the same "ABS" modules. Subsequently, as with other providers, the usage values will be used to calculate costs via the cost model described in the Administration section.

In case of failure, the process is automatically scheduled up to 3 attempts. If the system fails to resolve automatically, manual intervention is required. Additionally, a manual cost update can be requested using the buttons available in the Administration section.

Below are the specific details by subsystem type.

4.0.1.1.5.2 Customer cost recovery and calculation for the Azure provider

Recovery methods:

- **"Standard" model:** The ABS module requests costs for the last 2 days via Azure's REST APIs, which are then saved in the SCMP database.
- **"Storage Account" model:** The ABS module retrieves a file containing cost extractions, divided by subsystem, which are then saved in the SCMP database.
- **"Billing storage" model:** The ABS module retrieves a file containing extractions of all subscriptions available in the "billing account"; the results are divided by subsystem and saved in the database.

Cost calculation per single resource:

1. The ABS module sends cost information and information about the resource that generated them to the cost module.
2. The cost module verifies the subsystem configuration to identify the "aggregation type". This parameter indicates which catalog to use (RESOURCES or SKUs) to correctly calculate the price.
3. The cost module checks if the resource identifier (UUID) is present in the SCMP catalog. If present, the system

multiplies the usage by the catalog cost.

4. If the resource is not present in the catalog (and therefore does not fall into the previous step), the SCMP will apply the discount/markup percentage configured in the subsystem.

4.0.1.1.5.3 Customer cost recovery and calculation for the AWS provider

- **"Standard" model:** The ABS module queries AWS Cost Explorer APIs to get costs for the last 2 days, saving the data into the SCMP database.
- **"ARN ROLE" model:** The ABS module assumes a specific IAM role (ARN ROLE) to access AWS billing data. Costs are extracted and divided by subsystem, then saved into the SCMP database.

Cost calculation per single resource:

1. The ABS module sends cost information and information about the resource that generated them to the cost module.
2. The cost module verifies the subsystem configuration to identify the "aggregation type". This parameter indicates which catalog to use (RESOURCES or SKUs) to correctly calculate the price.
3. The cost module checks if the resource identifier (UUID) is present in the SCMP catalog. If present, the system multiplies the usage by the catalog cost.
4. If the resource is not present in the catalog (and therefore does not fall into the previous step), the SCMP will apply the discount/markup percentage configured in the subsystem.

4.0.1.1.5.4 Customer cost recovery and calculation for the Google provider

- **"Standard" model:** The ABS module queries Google Cloud Billing APIs to get costs for the last 2 days, saving the data into the SCMP database.
- **"Dataset Export" model:** The ABS module accesses billing data exported from **BigQuery**. Costs are extracted, divided by subsystem, and saved into the SCMP database.

Cost calculation per single resource:

1. The ABS module sends cost information and information about the resource that generated them to the cost module.
2. The cost module verifies the subsystem configuration to identify the "aggregation type". This parameter indicates which catalog to use (RESOURCES or SKUs) to correctly calculate the price.
3. If the "Cost from USD" field has been selected, the system will use the price in USD (returned by the provider) for the calculation, to which a discount/markup percentage defined in the administration section is applied. Otherwise, the price already converted to EUR is used.
4. The cost module checks if the resource identifier (UUID) is present in the SCMP catalog. If present, the system multiplies the usage by the catalog cost.

5. If the resource is not present in the catalog (and therefore does not fall into the previous step), the SCMP will apply the discount/markup percentage configured in the subsystem.

4.0.1.1.5.5 Customer cost recovery and calculation for Oracle, OracleEXAcc providers

- **"Standard" model:** The ABS module queries ORACLE APIs to get costs for the last 2 days, saving the data into the SCMP database.

Cost calculation per single resource:

1. The ABS module sends cost information and information about the resource that generated them to the cost module.
2. The cost module verifies the subsystem configuration to identify the "aggregation type". This parameter indicates which catalog to use (RESOURCES or SKUs) to correctly calculate the price.
3. If the "Cost from USD" field has been selected, the system will use the price in USD (returned by the provider) for the calculation, to which a discount/markup percentage defined in the administration section is applied. Otherwise, the price already converted to EUR is used.
4. The cost module checks if the resource identifier (UUID) is present in the SCMP catalog. If present, the system multiplies the usage by the catalog cost.
5. If the resource is not present in the catalog (and therefore does not fall into the previous step), the SCMP will apply the discount/markup percentage configured in the subsystem.

4.0.1.1.5.6 Customer cost recovery and calculation for Kubernetes, OpenShift, vcloudDirector, VMWare, Red Hat Edge providers

- *Standard model:* The ABS module generates Usage data on a 24-hour basis for all resources available in the inventory, as the providers are On-premise and all resources are allocated to the customer.

Cost calculation per single resource:

1. The ABS module sends cost information and information about the resource that generated them to the cost module.
2. The SCMP will apply the discount/markup percentage configured in the cost model.

4.0.1.2 New subsystem creation

To add a new subsystem to the portal, click on the "menu" available in the top right and select "+ Add new cloud provider".

| Name | Type | Creation Date | On-Premises | |
|----------------------------|-----------------------|---------------------|-------------------------------------|--------------------------|
| Azure Default | Azure | 04/01/2023 14:57:48 | <input type="checkbox"/> | <input type="checkbox"/> |
| VMware Default | VMWare | 04/01/2023 15:14:16 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| OpenShift Default | OpenShift | 07/03/2023 12:27:23 | <input type="checkbox"/> | <input type="checkbox"/> |
| Azure Hybrid Default | AzureStackHCI | 04/01/2023 15:49:36 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| AWS Default | AmazonWebServices | 13/04/2023 11:05:32 | <input type="checkbox"/> | <input type="checkbox"/> |
| google pls owner | Google | 18/05/2023 14:52:32 | <input type="checkbox"/> | <input type="checkbox"/> |
| Google Default | Google | 24/01/2023 11:49:55 | <input type="checkbox"/> | <input type="checkbox"/> |
| Azure On-Premise Default | AzureStack | 04/01/2023 15:36:59 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Azure Hybrid Cloud | AzureStackHybridCloud | 09/06/2023 15:36:59 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Cluster 02 - Leonardo PaaS | OpenShift | 16/06/2023 16:42:04 | <input type="checkbox"/> | <input type="checkbox"/> |
| azure CMP | Azure | 30/06/2023 17:14:32 | <input type="checkbox"/> | <input type="checkbox"/> |

Figura 65 – Add a new Cloud Provider

The user views the basic data of the subsystem to be entered, explained below.

4.0.1.2.1 PARAMETERS SHARED AMONG PROVIDERS

On the creation page, we can note 3 fields:

- Name: indicates the name that will be displayed to identify the subsystem.
- Type: indicates the type of cloud provider to which the subsystem belongs.
- Version: the version relative to the provider of the subsystem to be installed.

The screenshot shows a dark-themed web interface for managing cloud providers. At the top, there are navigation links for 'Cloud Systems', 'Cloud SIEMs', and 'Key Vaults'. The main title is 'New Cloud Provider/Folder'. Below the title, there are three input fields: 'Cloud Provider's Name *', 'Type *', and 'Version *'. At the bottom right of the form, there are three buttons: 'Close', 'Test Connection', and 'Save'.

Figura 66 – General parameters of a subsystem

After selecting the type and version of the system, the form updates to display specific parameters based on the selected provider, as each of them manages authentication and resources differently.

All providers require authentication, which may vary by system, for asset retrieval.

This sensitive information, such as passwords or certificates, is securely saved on an infrastructural element that handles data security <https://www.vaultproject.io/>.

4.0.1.2.2 CONNECTION VERIFICATION AND SAVING, SHARED AMONG PROVIDERS

For all subsystems, 3 buttons are available at the bottom of the page:

The "Close" button allows cancelling the addition of a new subsystem.

The "Test Connection" button is used to perform a connection test using the entered parameters. In case of errors, the system returns an error message indicating "Error: Unauthorized system" and the button turns red. Otherwise, the button will turn green, and it will be possible to save the subsystem using the "Save" button.

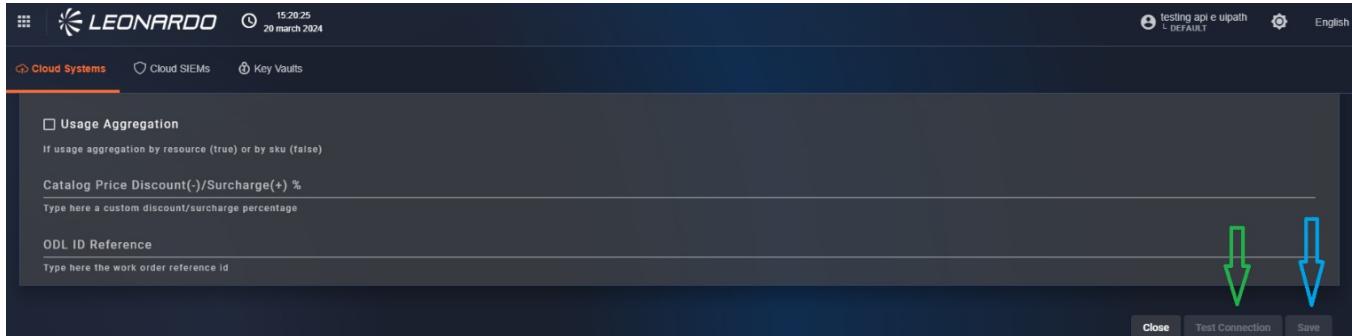

Figura 67 – Connection plates

Upon saving, the SCMP will communicate to the module managing that provider type to load all inventory items, metrics, costs, and security elements into our bus (Kafka).

The same module will subsequently schedule jobs for the periodic update of all existing assets.

After saving, a modal will appear informing the user that a cloud provider cannot be deleted before 24 hours. From the modal, click "OK". After doing so, the user is redirected to the Cloud Provider page.

4.0.1.2.3 AMAZON WEB SERVICES PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the Amazon Web Services subsystem to be entered are shown in the table:

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows a configuration dialog box for AWS settings. It includes fields for Access Key, Secret Key, Use a role, Resource Aggregator Name, Cost Bucket Path, Cost Export Dataset ID, Usage Aggregation, CMP Catalog Price Discount, ODL ID Reference, and First Cost Recover.

Figura 68 – Mask of configuration

Amazon Web Services

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|---|----------|---|---|
| AccessKey * | string | The AWS access key is an alphanumeric string that identifies the AWS user. | ZYKZGVAKIS4YK5IXC AXB |
| SecretKey * | password | The AWS secret access key is an alphanumeric string used to authenticate the AWS user. | np6Kc_xwsvhR8Q~rP 05fCqYNXmbqfMGQL OEzfMt |
| use A role | Boolean | Specifies the use of one or more administration roles for authentication on one or more specific accounts within the provider's organization. | true |
| Arn Role (only if useArole is active) | string | Enter here the Arn ID of the role associated with a specific account for performing the monitoring discovery phase and for provisioning. | arn:aws:iam:{accountID}:role/{roleName} |
| Audit Arn Role (only if useArole is active) | string | Enter here the Audit Arn ID of the role associated with a specific account for performing the inventory discovery phase. | arn:aws:iam:{accountID}:role/{roleName} |
| Aggregator Name | string | Enter here the name of the aggregator on resources for using the AWS Config service to support the inventory discovery phase. | aws-{aggregatorName} |

| Name | Type | Description | Example |
|--|---------|--|----------------------------|
| Cost Bucket Path | string | Enter here the path of the storage bucket for cost queries. | s3://{{bucketPath}} |
| Cost Export Dataset ID | string | Enter here the ID of the cost dataset on which to execute queries. | {databaseName}.{tableName} |
| usageAggregation | Boolean | Indicates the type of aggregation used for cost calculation (true for resources, false for SKUs). | True |
| Rate Code Aggregation (only if useAggregation is false) | Boolean | Indicates whether SKU aggregation occurs by SKU ID or by rate code. | true |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

■ Provider Configurations

1. S3 Configuration

- Access **Amazon S3**.
- Create or use a bucket for CUR data.
- Enable **Bucket Versioning**.

2. CUR Definition

- Access **Billing and cost management**.
- Go to the Data Exports section.
- Configure a new CUR report as follows:
 - Export details:
 - **Standard data export**: standard export format
 - **Export name**: name of the report
 - Data table content settings:
 - Select **CUR 2.0**.

- Select **Hourly** as granularity.
- Data export delivery options:
 - file format: **Parquet**.
 - file versioning: **Overwrite existing data export file**.
- Data export storage settings:
 - Configure the S3 bucket pointer with the one initially created.
 - Configure the bucket path prefix with **data**.

3. IAM Role Creation for Glue

- Access **IAM**.
- Create a custom role for Amazon Glue management.
- Assign the following policies:
 - AWSGlueServiceRole (standard AWS policy)
 - Custom policy for S3 bucket access:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "s3:GetObject",
        "s3:PutObject"
      ],
      "Resource": [
        "arn:aws:s3:::{bucketPath}/*"
      ]
    }
  ]
}
```

4. Glue Database Creation

- Access **AWS Glue**.
- Create the database.

5. Crawler Configuration

- Create a **crawler** in Glue:
 - Select the custom role previously created.
 - Define the S3 path as `s3://{bucketPath}/data/` .

- Set a **scheduling** (e.g., hourly: 0 * * * *).

6. Usage in Athena

- After the first execution of the crawler, data will be available in **Athena** for queries.
- Δ *For past historical data, contact AWS support.*

1. AWS Configuration and Aggregators

a. Initial Configuration

- Access **AWS Config** and click **Get started**.
- Create an S3 bucket for aggregated data.
- Enable override for **IAM** resource types and leave the remaining default options; AWS will automatically create the necessary role.

b. Config Aggregator

- Create a **resource aggregator** in the **Aggregators** section.
- Include all regions.

1. IAM User Creation

- Access **IAM** and go to the **Users** section.
- Create a new user or select an existing one.
- Optional: enable console access for the created user.

2. Policies to Assign to the User

- AmazonAthenaFullAccess
- AmazonS3FullAccess
- AWS_ConfigRole
- AWSConfigUserAccess
- AmazonEC2ReadOnlyAccess
- CloudWatchReadOnlyAccess
- Add the following custom policy for managing the CUR bucket:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [ "s3:*" ],
      "Resource": [
        "arn:aws:s3:::{bucketPath}/",
        "arn:aws:s3:::{bucketPath}/*"
      ]
    }
  ]
}
```

3. Access Key

- Generate **Secret Credential**.
- Save the **Access Key** and **Secret Key** (cannot be retrieved later). To enable **role assumption** via STS for cross-account services (e.g., AWS Config), associate the following policy with the created user:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "sts:AssumeRole",
      "Resource": [
        "arn:aws:iam::{accountID}:role/{roleName}"
      ]
    }
  ]
}
```

4.0.1.2.4 AZURE PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning

- Service provisioning
- Complex blueprint provisioning

The specific parameters of the Azure subsystem to be entered are shown in the table:

Figura 69 – Azure configuration mask

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|----------------|----------|--|---|
| clientId * | string | The unique ID of the client connecting to the Azure Cloud subsystem. This ID is used to identify the client and authorize access to the subsystem's resources. | 5a85c16c6ad-49db-a58e-e209-ee11f53d6c6b |
| clientSecret * | password | The client's secret key, used to authenticate the client with the Azure Cloud subsystem. The secret key must be kept confidential and not shared with anyone. | np6Kc_.xwsvhR8Q~rP05fCqYNXmbqfMGQLOEfMt |
| tenantId * | string | The ID of the Azure tenant to which the Azure Cloud subsystem belongs. A tenant is an organizational entity in Azure representing a company or organization. | 884147733-ff13-4783-a765-834183773083 |

| Name | Type | Description | Example |
|-----------------------------|---------|---|--|
| subscriptionId * | string | The ID of the Azure subscription used to access the Azure Cloud subsystem. A subscription is a contract for using Azure services. | 884147733-ff13-4783-a765-83418377308 3 |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| Storage account ID** | String | Enter the path where cost exports are performed. | /subscriptions/{{subscription}}/resourceGroups/{{resourcegroup}}/providers/Microsoft.Storage/storageAccounts/{{storage account}} |
| Cost from Billing storage** | boolean | Select this checkbox to retrieve costs in "billing Account" format. | true |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

Variables for cost calculation

Variables indicated with ** are exclusive, so only one can be selected at a time. Each variable activates a different system for cost calculation, and if more than one is set, subsystem saving will be prevented. Specifically, we can:

- Use the "Storage account ID" field to retrieve costs via automatic extractions performed individually per subsystem (only if the storage belongs to the same tenant).
- Use the "Cost from Billing storage" field to retrieve costs at the billing account level, thus using a single file for all available subscriptions (Contributor and Blob Contributor permissions are required).
- By leaving "Cost from Billing storage" and "Cost from billing storage" empty, the SCMP will retrieve costs using the Azure APIs prepared for daily costs.

This distinction is necessary to prevent Azure APIs from responding with a 429 error due to a large number of requests. Additionally, to use the methods described previously, the Azure system must be correctly configured and the entered credentials must have all necessary permissions.

4.0.1.2.5 AZURESTACK PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the AzureStack subsystem to be entered are shown in the table:

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows a configuration interface for a new cloud provider or folder. The main title is 'New Cloud Provider/Folder'. The configuration data section includes:

- Cloud Provider's Name ***: AzureStack
- Type ***: AzureStack
- Version ***: 2020-09-01
- Connection Parameters** (multiple sections):
 - Client ID ***: Type here to client id
 - Client Secret ***: Type here to client secret
 - Tenant ID ***: Type here to the tenant id
 - Subscription ID ***: Type here to the subscription id
 - Resource Group ***: Type here to the management group
 - Azure Endpoint ***: Type here to the Azure endpoint
 - Region/Location ***: Type here to the subscription id
 - Cloud Client ID ***: Type here to cloud client id
 - Cloud Client Secret ***: Type here to cloud client secret
 - Cloud Tenant ID ***: Type here to cloud tenant id
 - Cloud Subscription ID ***: Type here to cloud subscription id
 - Location ***: Select the Azure region location
 - Total VMs Capacity ***: Total virtual server of the subsystem
 - Total RAM Capacity (MB) ***: Total ram of the subsystem, in MB
 - Total Storage Size Capacity (GB) ***: Total storage size of the subsystem, in GB
 - Carrying Device Dimension(1)/Bandwidth(1) %**: Type here a custom dimension value or percentage
- URL Reference**: Type here the code under reference id

*Figura 70 – AzureStack configuration
mask*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------|----------|--|---|
| clientId * | string | The unique ID of the client connecting to the Azure Cloud subsystem. This ID is used to identify the client and authorize access to the subsystem's resources. | 5a85c16c6ad-49db-a58e-e209-ee11f53d6cb |
| clientSecret * | password | The client's secret key, used to authenticate the client with the Azure Cloud subsystem. The secret key must be kept confidential and not shared with anyone. | np6Kc_.xwsvhR8QrP05fCqYNXmbqfMGQLOEzfMt |
| tenantId * | string | The ID of the Azure tenant to which the Azure Cloud subsystem belongs. A tenant is an organizational entity in Azure representing a company or organization. | 884147733-ff13-4783-a765-834183773083 |
| subscriptionId * | string | The ID of the Azure subscription used to access the Azure Cloud subsystem. A subscription is a contract for using Azure services. | 884147733-ff13-4783-a765-834183773083 |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |

| Name | Type | Description | Example |
|----------------------|---------|--|---------|
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

For On-Premise providers, in particular, data on infrastructure capacity is requested so that the SCMP can perform preliminary calculations in multiple scenarios.

For example, during provisioning, to ensure that the maximum allowed capacity of the provider is not exceeded.

4.0.1.2.6 AZURESTACK HCI PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the AzureStack HCI subsystem to be entered are shown in the table:

| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |

| Name | Type | Description | Example |
|----------------------|---------|--|---------|
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

For On-Premise providers, in particular, data on infrastructure capacity is requested so that the SCMP can perform preliminary calculations in multiple scenarios.

For example, during provisioning, to ensure that the maximum allowed capacity of the provider is not exceeded.

4.0.1.2.8 REDHAT EDGE DEVICE PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the Google Cloud subsystem to be entered are shown in the table.

The screenshot shows a dark-themed web interface for managing cloud providers. At the top, there are navigation links for Cloud Systems, Cloud SIEMs, Key Vaults, CommVaults, and Confidential Computing. The main header indicates the date and time as 07 November 2024, 14:19:20. On the right, there are user profile and language selection options. Below the header, a breadcrumb trail shows 'Administration / Cloud System / New'. The central area is titled 'New Cloud Provider/Folder' and contains a 'Configuration data' section. This section includes fields for 'Cloud Provider's Name' (set to 'Edge'), 'Type' (set to 'Edge'), 'Version' (set to 'v1'), and 'Connection Parameters' which include 'Client ID' and 'Client Secret'. At the bottom of the dialog are three buttons: 'Close', 'Test Connection', and 'Save'.

Figura 73 – Edge configuration mask

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|----------------------|---------|--|---------------------------|
| client_id * | string | | 10482247326 1100667392 |
| clientSecret * | string | Client secret used for connection | 82hg7ds1h0sd s7392 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 10 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

■ PROVIDER side configuration

To be able to add the system to the SCMP, some configurations need to be performed on the provider's portal.

Specifically:

- Create a service account
 - a. Access <https://console.redhat.com>
 - b. In the top right, click on the ⚙️ Settings icon → Service Accounts → Create service account.
 - c. Enter Name and Description → Create.
 - d. Immediately copy the Client ID and Client Secret (the secret will not be shown again).
- Assign permissions
 - a. Go to Settings → User Access → Groups
 - b. Create a group that contains the following permissions/roles:

| Service | Recommended role |
|---------------------------------|--|
| Edge Management (fleet, update) | Edge Management Administrator or User |
| Image Builder | Image Builder Administrator or User |
| Insights Inventory (host read) | Insights Inventory Viewer |

- In the Service accounts tab of the group → Add service account → select the newly created account.
- Rotate and revoke permissions
 - a. Portal → Service Accounts → menu (⋮)
 - b. Select **Reset credentials** to regenerate only the Client Secret.
 - c. Select **Delete service account** to permanently decommission the automation.

With this configuration, you can securely orchestrate the entire edge lifecycle – from image generation to update rollout – without ever using personal credentials.

4.0.1.2.9 GOOGLE CLOUD PARAMETERS

Enabled functionalities:

Catalog item retrieval

- Inventory item retrieval

- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the Google Cloud subsystem to be entered are shown in the table. The “Service account” field can be entered either automatically or manually as described in the paragraph.

Figura 74 – Google configuration mask

Parameters indicated with * are mandatory (available below the service account section).

| Name | Type | Description | Example |
|----------------------|--------|--|---|
| serviceAccount * | object | Connection file generated from the Google console | service_account.json |
| discoveryProjectId * | string | Identifier of the project for which discovery will be performed | Theproject-547280 |
| costExportProjectId | string | Dataset ID of the cost export service account if the dataset is different from the ProjectID | test-customer.test_customer.gcp_billing_export_resource_v1_0152 7DF_51B683_EB2A9 |

| Name | Type | Description | Example |
|---|---------|---|---------|
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| Cost from USD Currency | boolean | Indicates whether the final cost is calculated from the price in USD or EUR. | true |
| providerPriceDiscount ** (only if costFromUSDCurrency is true) | integer | Enter here a discount/markup to apply to provider prices in USD for all resources. | 30 |
| catalogPriceDiscount ** | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | -5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

Variables for cost calculation

The variables indicated with ** are used differently for "customer" cost calculation depending on the presence of the "Cost from USD Currency" field. Specifically:

- If the field is deactivated, the value entered in "catalogPriceDiscount" is used as a percentage added to the price retrieved from the provider (or discounted if the value is negative), as for other providers.
- If the field is activated, the value entered in "catalogPriceDiscount" and the "providerPriceDiscount" value are used as a coefficient multiplied by the cost in USD retrieved from the provider.

This distinction is necessary to prevent Azure APIs from responding with a 429 error due to a large number of requests. Additionally, to use the methods described previously, the Azure system must be correctly configured and the entered credentials must have all necessary permissions.

The screenshot shows a configuration interface for a new cloud provider or folder. At the top, it says 'New Cloud Provider/Folder'. Below that, there's a section for 'Cloud Provider's Name' set to 'Google'. A note says 'It's possible to upload service_account.json to the opened up form's file input'. A red arrow points to the 'Click here to import from service_account.json' button. A yellow box highlights the main configuration area. At the bottom, there are sections for 'Active Project ID', 'Cost Export Dataset ID', 'Usage Aggregation', 'Catalog Price Discount (%)', and 'OSS ID Reference'.

Figura 75 – Configuration file loading

By uploading the file, the form is automatically completed with the necessary parameters, but it is also possible to enter them manually (yellow box in the image), following the table. All fields are mandatory:

| Name | Type | Description | Example |
|------------------|----------|--|---|
| Type | string | Enter the name of the configured authentication type. | service_account |
| project_id * | string | Enter here the unique ID of the project associated with the service account. | Theproject-367810 |
| private_key_id * | string | Enter here the unique ID of the service account's private key. | 55cb5cf903ee93ea1e9c294a07e46e0af0633e6 |
| private_key * | password | Contains the service account's private key in PEM format. It is essential for authenticating the service account to Google Cloud APIs. | ----BEGIN PRIVATE KEY----MIIJQgIBADANB... |
| client_e-mail * | string | The unique email address of the service account. It is used to identify the service account when authenticating to Google Cloud APIs. | user@dominio.com |

| Name | Type | Description | Example |
|------------------------------|--------|---|---|
| client_id * | string | The client ID of the service account. It is a unique identifier used to identify the service account in Google Cloud. | 104822473261100667392 |
| auth_uri * | string | The URI used for authenticating the service account to Google Cloud APIs. | https://accounts.google.com/o/oauth2/auth |
| token_uri * | string | The URI used to obtain an access token for the service account. | https://oauth2.googleapis.com/token |
| auth_provider_x509_cert_url* | string | The URL of the X.509 certificate used for authenticating the service account. | https://www.googleapis.com/oauth2/v1/certs |
| client_x509_cert_url * | string | The URL of the X.509 certificate in the client. | https://www.googleapis.com/robot/v1/metadata/f543/myserviceaccount%40projectName.gserviceaccount.com |

■ Provider Configuration

1. Access GCP Console

- Go to <https://console.cloud.google.com/>
- Log in with your Google Cloud account.

2. Create or Identify the Service Account (SA)

From the console, select the project at the top where you want to add (or where it is already present) the service account. From the console, to create the service account, go to IAM and admin > Service accounts. Click on Create service account. Assign an ID (e.g., my-service-account), name, and description, then Create. On the service account page, go to the Keys section. Click on Add key and select Create new key. Choose JSON format and click Create. Download and keep the JSON file in a safe place.

3. Associate Permissions with the Service Account

On the same service accounts page, find the newly created account and click on its name. Go to the Permissions section and in the table below, next to the service account, in the Inheritance column, click on Edit principal. In the pop-up menu, select the appropriate roles for the service account. Below is the minimal list of roles for the SCMP: - App Engine Admin - BigQuery Data Transfer Service Agent - Cloud OS Config Service Agent - Compute Admin - Kubernetes Engine Service Agent - OS Inventory Viewer - Security Center Service Agent Click Save and add the permissions to the service account.

4. Enable Service APIs

Go back to the console home. Select the project at the top where the service account is present. Go to APIs and services. At the top, click on + Enable APIs and services. Search for the API services to enable in the search bar and click on their name. Once inside the API service, select Enable to activate it; below are the API services for the SCMP: - Cloud Monitoring API - Compute Engine API - Cloud Asset API - BigQuery API - Cloud Resource Manager API - OS Config API - Security Command Center API - Cloud Billing API - Service Usage API - Cloud Dataplex API

5. Cost Dataset

If the cost dataset is located in a different service account than the one you want to integrate, specify the complete connection string to the relevant dataset in the Cost Export Dataset ID text box (in the subsystem creation module present in SCMP administration) (e.g., projectId.datasetName.tableName).

4.0.1.2.10 KUBERNETES PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval

- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the Kubernetes subsystem to be entered are shown in the table.

The screenshot shows a configuration interface for a new cloud provider or folder. The 'Cloud Provider's Name' field is set to 'Kubernetes'. The 'Version' field is set to '1.21.0'. Under 'Connection Parameters', there are fields for 'Certificate Authority Data', 'Kubernetes API Server URI', 'User Certificate Data', 'User Key Data', 'User Token', and 'User Name'. A 'Label Selector' field contains '0'. The 'ODL ID Reference' field is empty. At the bottom, there are 'Close', 'Test Connection', and 'Save' buttons.

Figura 76 – Configuration mask

Kubernetes

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------------------|--------|--|------------------------------|
| Certificate authority data * | string | Enter the data related to the certificate used by the user for connection. | Sgeijesf90434n7u3h97ef |
| Kubernetes API server URI * | string | Enter the URL of the server to connect to. | https://www.google.com/infos |

| Name | Type | Description | Example |
|-------------------------|---------|--|--|
| User certificate Data * | String | Enter the certificate related to the user used for connection. | ---begin private key--- fnbsujffsfoije ... |
| User key Data * | String | Enter the key related to the user used for connection. | Sf8j9jts4ewht7h3wf wj908w |
| User token * | String | Secret token related to the user used for connection to the provider. | Sf8eufce9sfber4543 jh8ddsfh89r43 |
| User name * | String | Enter the username used for authentication. | administrator |
| Label selector | string | Enter here a selector to filter resources retrieved by the SCMP. | Name=rossi |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | -10 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |

■ Provider Configuration

The standard authentication method is via the parameters contained in the kubeconfig file. The kubeconfig defines:
 API server endpoint (server) Authentication method (client certificates, tokens, oidc, etc.) Default namespace
 Context Authentication: Via client certificates (client-certificate-data and client-key-data)

Or via token (token in the user context)

Minimal kubeconfig example:

```
apiVersion: v1
kind: Config
clusters:
- cluster: certificate-authority-data:
  server: https://name:my-cluster
contexts:
- context:
    cluster: my-cluster
    user: my-user
  name: my-context
current-context: my-context
users:
- name: my-user
  user:
    token:
```

4.0.1.2.11 OPENSHIFT PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval

- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the OpenShift subsystem to be entered are shown in the table:

Figura 77 – OpenShift configuration mask

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|-------------------|----------|---|-----------------------|
| Username * | string | The username of the OpenShift user that will be used for connection to the provider. | name.surname@mail.com |
| Password * | password | The client's password, used to authenticate the client with the subsystem. The secret key must be kept confidential and not shared with anyone. | np6KcXmbqfMGQLOEfMt |
| API server port * | integer | The port on which the OpenShift APIs are listening. | 8090 |

| Name | Type | Description | Example |
|--|-----------|--|-----------------------|
| API url * | string | The OpenShift URL on which to make requests. | www.google.com |
| discover all Namespaces | boolean | If the user has administrator permissions on all OpenShift "projects," all namespaces will be retrieved. | false |
| Namespace selector (only visible if "discover all namespaces" is active) | selection | If the user has visibility of a limited number of namespaces, it is necessary to enter the list of enabled namespaces here. | demo.infos,production |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

■ User authorizations

If the "Discover all namespaces" field is selected, it is necessary that the user has administration permissions on **ALL** namespaces, otherwise, the system cannot be added.

This distinction is necessary because the OpenShift system automatically blocks incorrectly authorized requests.

■ Provider Configuration

To connect an OpenShift cluster system, it is sufficient to have a named or impersonal user with adequate privileges (e.g., cluster-admin or otherwise sufficient for the intended use) on the cluster.

Authentication:

Username and Password

Notes:

In OpenShift, it is very common to use specially created ServiceAccounts, with corresponding RoleBindings or ClusterRoleBindings.

Users can be both human (named) and technical (impersonal).

4.0.1.2.12 ORACLE PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Resource cost retrieval
- Security information retrieval

The specific parameters of the Oracle subsystem to be entered are shown in the table:

Figura 78 – Oracle configuration mask

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|---------------|--------|---|--|
| username * | string | The username used for authentication with OCI. | ocid5.user.oc77.aaabnbthaj6pnvbs2gqnaaaaait3mqzekefmlhwkige2wxna6hfaj3f6njma |
| fingerprint * | string | Is a unique value that identifies the device, used for authentication with OCI. | 6a:f4:6e:9a:73:95:27:d5:64:8d11:a3:f5:0e:fb:f4: |
| tenantId * | string | The ID of the OCI tenant to connect to. | ocid5.tenancy.oc7...aaabnbthaj6pnvbs2gqnaaaaait3mqzekefmlhwkige2wxna6hfaj3f6njma |

| Name | Type | Description | Example |
|----------------------|----------|---|---|
| region * | string | The region is the specific geographic location where OCI resources are located. | eu-dcc-rome-1 |
| Realm | string | The name of the logical container that groups OCI resources and their associated costs. | personal-realm.it |
| keyFile * | password | A PEM file containing the public and private key used for authentication. | " -----BEGIN PRIVATE KEY-----MIJQgIBADANB..." |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | -10 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

■ Provider Configuration

Procedure for creating parameters for external integration in Oracle Cloud Infrastructure (OCI): 1. Access OCI Console

Go to <https://cloud.oracle.com/>
Log in with your Oracle Cloud account.

1. Create or Identify the IAM User

In the main console menu, go to Identity & Security > Users. Select an existing user or create a new user for the integration: Click on Create User if you need to create one. Assign a name and an email. Save.

2. Associate the user with a group with adequate permissions

After creating the user, you must associate it with a group that has permissions for the resources you want to manage via API. Go to Identity > Groups. Select a group (e.g., Administrators or create a custom group). Click on Add User to Group and add the newly created user.

3. Generate the API key (Key File)

Go back to the user page (Identity > Users > select user). Go to the API Keys tab. Click on Add API Key. You have two options: Upload an existing public key (RSA public). Or generate a new public and private key from the console (download the private key). Select “Generate API Key Pair” to locally generate the key: Download the private key (.pem) and save it securely (it is your Key File). The public key will be automatically associated with the user.

4. Obtain the required parameters

User OCID (User OCID): Go to Identity > Users > select user. You will find the user OCID on the user page (format ocid1.user.oc1..aaaaaaaa...). Fingerprint: It is the fingerprint of the public API key you added (displayed in the API Keys section). Tenant OCID (Tenant OCID / Main Compartment OCID): Go to Identity > Tenancy (click on the tenancy name in the top left). You will find the tenancy OCID (it is the main tenant, e.g., ocid1.tenancy.oc1..aaaaaaaa...). Region: Choose your OCI region (e.g., eu-frankfurt-1, us-ashburn-1, etc.). You can find it in the top right of the console or in Governance & Administration > Regions. Realm: It is usually oc1 for most public OCI tenants. You can verify this in the documentation or via CLI if necessary.

Summary of parameters and where to find them

Parameter Where to find it / how to obtain it User OCID Identity > Users > select user > OCID Fingerprint Identity > Users > API Keys > fingerprint Tenant OCID Identity > Tenancy > OCID Region Top right of the console (e.g., eu-frankfurt-1) Realm Generally oc1 (standard OCI realm) Key File Private .pem key generated at the time of API Key creation

4.0.1.2.13 ORACLEEXACC PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Resource cost retrieval
- Security information retrieval

The specific parameters of the OracleExAcc subsystem to be entered are shown in the table:

Figura 79 – Configuration mask

OracleExAcc

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|---------------|--------|---|--|
| username * | string | The username used for authentication with OCI. | ocid5.user.oc77.aaabnbthaj6pnvsb2g qnaaaaaait3mqzekefmilhwkige2wxna6h faj3f6njma |
| fingerprint * | string | Is a unique value that identifies the device, used for authentication with OCI. | 6a:f4:6e:9a:73:95:27:d5:64:8d11:a3:f5 :0e:fb:f4: |

| Name | Type | Description | Example |
|----------------------|----------|--|--|
| tenantId * | string | The ID of the OCI tenant to connect to. | ocid5.tenancy.oc77...aabnbthaj6pnv sb2gqnaaaaait3mqzekefmlhwkige2wx na6hfaj3f6njma |
| region * | string | The region is the specific geographic location where OCI resources are located. | eu-dcc-rome-1 |
| Private key * | password | A PEM file containing the public and private key used for authentication. | " -----BEGIN PRIVATE KEY-----MIIJQ gIBADANB..." |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | -10 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| dataFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

4.0.1.2.14 VCLOUD PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval

The specific parameters of the VCloudDirector subsystem to be entered are shown in the table.

The screenshot shows the configuration interface for a new cloud provider. It includes fields for the provider's name, type (set to VCloudDirector), connection parameters like URL endpoint and tenant ID, and optional settings like catalog price discount and ODL ID reference. At the bottom, there are buttons for closing the window, testing the connection, and saving the configuration.

*Figura 80 – VCloudDirector
configuration mask*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------------|----------|--|--|
| url * | string | The address of the VCloudDirector server to connect to. | https://url.westeurope.com/tenant/org-zzg-435832 |
| tenantId * | string | The VCloudDirector tenant ID is the unique identifier of the tenant to connect to. | org-zzg-435832 |
| Use providerPermission | boolean | To be activated if the user has all provider-level authorizations; if not activated, not all information is retrieved, only that of the enabled organizations. | true |
| token * | password | The authentication token for the VCloudDirector is a secret string used to authenticate the user with the VCloudDirector. | aesZo6LextKTQx92VoRpyzaesZo6LextKT |
| Location | String | Enter the region to which the VCloudDirector resources belong. | Eu west |
| Location | string | Enter the geographical location of the system. | OnPremise |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |

Leonardo Cyber & Security Solutions

15 Dec 2025
09.00

Secure Cloud Management Platform

| Name | Type | Description | Example |
|-------|--------|--|---------|
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |

4.0.1.2.15 VMWARE PARAMETERS

Enabled functionalities:

- Catalog item retrieval
- Inventory item retrieval
- Usage metrics retrieval
- Resource cost retrieval
- Security information retrieval
- Resource provisioning
- Service provisioning
- Complex blueprint provisioning

The specific parameters of the VMWare subsystem to be entered are shown in the table:

The screenshot shows a configuration interface for a VMWare subsystem. The top navigation bar includes the Leonardo logo, user info (14:17:41, 21 march 2024), and language selection (English). The main form has the following fields:

- Type ***: VMWare
- Version ***: 7.0.0
- Connection Parameters**:
 - Username ***: Type here the username
 - Password ***: Type here the password
 - URL ***: www
 - Location**: Select the sub-system location
- Total VCPU Capacity ***: Total virtual CPU of the sub-system
- Total RAM Capacity (MB) ***: Total RAM of the sub-system, in MB
- Total Storage Size Capacity (GB) ***: Total storage size of the sub-system, in GB
- Catalog Price Discount(-)/Surcharge(+) %**: Type here a custom discount/surcharge percentage
- ODL ID Reference**: Type here the work order reference id

At the bottom right are buttons for **Close**, **Test Connection**, and **Save**.

*Figura 81 – Configuration mask
VMWare*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|----------------------|----------|--|---|
| clientId * | string | The unique ID of the client connecting to the Azure Cloud subsystem. This ID is used to identify the client and authorize access to the subsystem's resources. | 5a85c16c6ad-49db-a58e-e209-ee11f53d6c6b |
| clientSecret * | password | The client's secret key, used to authenticate the client with the Azure Cloud subsystem. The secret key must be kept confidential and not shared with anyone. | np6Kc_xwsvhR8Q-rP05fCqYNXmbqfMGQLOEzfMt |
| tenantId * | string | The ID of the Azure tenant to which the Azure Cloud subsystem belongs. A tenant is an organizational entity in Azure representing a company or organization. | 884147733-ff13-4783-a765-834183773083 |
| subscriptionId * | string | The ID of the Azure subscription used to access the Azure Cloud subsystem. A subscription is a contract for using Azure services. | 884147733-ff13-4783-a765-834183773083 |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| daysFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

For On-Premise providers, in particular, data on infrastructure capacity is requested so that the SCMP can perform preliminary calculations in multiple scenarios.

For example, during provisioning, to ensure that the maximum allowed capacity of the provider is not exceeded.

4.0.1.3 Folders

4.0.1.3.1 AZURE FOLDER

To allow the SCMP to leverage all the potential offered by the "Azure" provider, the ability to configure "Folders" has been introduced.

During the creation of a provider, by selecting the "Azure" type, we can observe the presence of an exclusive field for the provider:

- A confirmation box to indicate to the SCMP if the provider being added is a "Folder".

The screenshot shows the 'New Cloud Provider / Order' configuration page. In the 'Configuration data' section, there is a checkbox labeled 'Is a Folder of projects' which is checked. A red box highlights this checkbox, and a red arrow points to it from the left.

Figura 82 – Option folder Azure

The specific parameters of the Azure subsystem to be entered are shown in the following table:

The screenshot shows the 'Configuration mask Azure' dialog box. It contains the following fields:

- Version ***: 2020-08-01
- Connection Parameters**
- Client ID ***: Type here the client id
- Client Secret ***: Type here the client secret
- Tenant ID ***: Type here the tenant id
- Usage Aggregation**: An unchecked checkbox with the note "If usage aggregation by resource (true) or by sku (false)".
- Catalog Price Discount(-)/Surcharge(+) %**: Type here a custom discount/surcharge percentage
- ODL ID Reference**
- Days first cost recover**: A value set to 2

Figura 83 – Configuration mask Azure

*Folder*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|----------------------|----------|--|---|
| clientId * | string | The unique ID of the client connecting to the Azure Cloud subsystem. This ID is used to identify the client and authorize access to the subsystem's resources. | 5a85c16c6ad-49db-a58e-e209-ee11f53d6c6b |
| clientSecret * | password | The client's secret key, used to authenticate the client with the Azure Cloud subsystem. The secret key must be kept confidential and not shared with anyone. | np6Kc_.xwsvhR8Q~P05fCqYNXmbqfMGQLOEzfMt |
| tenantId * | string | The ID of the Azure tenant to which the Azure Cloud subsystem belongs. A tenant is an organizational entity in Azure representing a company or organization. | 884147733-ff13-4783-a765-834183773083 |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | 5 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| daysFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

4.0.1.3.2 GOOGLE CLOUD FOLDERS

To allow the SCMP to leverage all the potential offered by the "Google Cloud" provider, the ability to configure "Folders" has been introduced, along with the option to import the file generated from the provider's console to simplify its insertion.

During the creation of a provider, by selecting the "Google Cloud" type, we can observe the presence of 2 exclusive fields for the provider:

1. A confirmation box to indicate to the SCMP if the provider being added is a "Folder".
2. A box where, by clicking inside, it will be possible, through the Windows file selection window, to insert the "JSON" file exported directly from the Google console.

The screenshot shows the 'New Cloud Provider/Folder' configuration page. It includes fields for 'Cloud Provider's Name' (myGoogleSubsystem), 'Type' (Google), and 'Is a Folder of projects' (checkbox). Below these are sections for 'Version' (v1) and 'Connection Parameters'. A note says 'It's possible to upload service_account.json file to speed up form's fields filling.' with a link to 'Click here to import from service_account.json'. Red arrows labeled '1' and '2' point to the 'Is a Folder of projects' checkbox and the import button respectively.

Figura 84 – Specific parameters of Google Cloud

The specific parameters for the Google Folder to be entered are shown in the table:

| Name | Type | Description | Example |
|---|---------|---|-------------------------|
| serviceAccount | object | Connection file generated from the Google console | service_account.json |
| costExportDatasetID | string | Enter the ID of the dataset to be used for information retrieval. | Projectid.dataset.table |
| usageAggregation | boolean | Indicates whether "usage" aggregation is enabled for the subscription. When this option is enabled, subsystem costs will be grouped by Resource Type. | false |
| Cost from USD Currency | Boolean | Indicates whether the final cost is calculated from the price in USD or EUR. | true |
| providerPriceDiscount (only if costFromUSDCurrency is true) | integer | Enter here a discount/markup to apply to provider prices in USD for all resources. | 30 |
| Cost cross project | Boolean | Indicates whether to retrieve costs for all projects in the billing account or only for the current project. | true |

| Name | Type | Description | Example |
|----------------------|---------|--|---------|
| catalogPriceDiscount | integer | Enter here a discount/markup to apply to catalog prices for all resources that do not have an SCMP relationship. | -20 |
| odlID | string | Enter here the ID of the work order that will be associated with the subsystem and will be inserted as a tag on all subsystem resources. | ODL001 |
| daysFirstCostRecover | int | Enter the number of days prior to the creation date for which costs should be recovered at the first startup of the subsystem. | 15 |

■ Mandatory Enabled Services

The following services must be enabled on the service account used:

- bigquery.googleapis.com
- clouddresourcemanagement.googleapis.com
- cloudasset.googleapis.com
- cloudbilling.googleapis.com
- compute.googleapis.com
- container.googleapis.com
- monitoring.googleapis.com

The "ServiceAccount" field can be automatically entered by uploading the file or manually by entering the fields available in the form.

After configuring a "Folder" type system, it will be displayed in both the cloud provider list and the folders page.

| Name | Type | Creation Date | On-Premises | State |
|----------------------------|------------|---------------------|--------------------------|--------------------------------------|
| CMP Managed Folder | GOOGLE | 20/05/2024 15:53:40 | <input type="checkbox"/> | ● |
| CMP Managed Azure Folder | AZURE | 20/05/2024 15:54:47 | <input type="checkbox"/> | ● |
| MAE Digital Transformation | AZURE | 20/05/2024 15:54:48 | <input type="checkbox"/> | ● |
| MAE CMP | AZURE | 20/05/2024 15:54:49 | <input type="checkbox"/> | ● |
| MAE OSP 2030 | AZURE | 20/05/2024 15:54:49 | <input type="checkbox"/> | ● |

Figura 85 – See folders

From the "Cloud System" page of the "Administration" module, click the "Folders" tab in the top right, which will display the list of folders configured in the tenant.

Within the page, the same view, modify, and delete operations can be performed on folders as those performed on the "Cloud Provider" page.

The screenshot shows a dark-themed web interface for the Leonardo Secure Cloud Management Platform. At the top, there's a header with the Leonardo logo, the date and time (3:10:33 pm, 05 July 2023), and user information (cmp_admin, TENANTFOLDER, English). Below the header, a navigation bar has three tabs: 'Cloud Systems' (highlighted in orange), 'Cloud SIEMs', and 'Key Vaults'. The main content area is titled 'Administration / Cloud System'. On the left, a sidebar lists 'Folder list' with one item: 'ASL02 Folder' (Type: Google, Creation Date: 30/06/2023 16:21:22). On the right, there are buttons for 'Show', 'Systems', 'Folders' (which is highlighted in grey), and a menu icon. A large red arrow points to the 'Folders' button.

Figura 86 – Access to Folders

When accessing a "Folder" in "View" mode, scrolling down the page reveals a list of subsystems present in the provider and their status information:

- In green, we can see a subsystem correctly configured in the provider that the SCMP automatically adds to the system and will be visible in the "Cloud Providers" section and in all SCMP functionalities.
- In red, we can see an incorrectly configured subsystem which, after appropriate modifications from the "Google Cloud" console, can be accepted by the SCMP.

Secure Cloud Management Platform

Figura 88 – Creation of a SIEM cloud provider

On the "Add SIEM" page, fill in all fields in the "General properties" section. After doing this, fill in all fields in the "SIEM's properties" section according to the table:

*Figura 89 – Compilation of the form to
create a SIEM provider*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------|----------|---|---|
| clientId * | string | Unique ID of the SIEM to connect to, provided by the SIEM during application registration. | 1b16698f-2df5-ed44-86b9ed-4b42c 1fe7ad9 |
| clientSecret * | password | The secret to use for the connection, provided by the SIEM during application registration. | 1b16698f-2df5-ed44-86b9ed-4b42c 1fe7ad9 |
| resourceGroup * | string | The Azure resource group where the SIEM is hosted. | myGroup |
| subscriptionId * | string | The Azure subscription ID associated with the SIEM. | 1b16698f-2df5-ed44-86b9ed-4b42c 1fe7ad9 |
| tenantId * | string | The Azure tenant ID associated with the SIEM. | 1b16698f-2df5-ed44-86b9ed-4b42c 1fe7ad9 |
| workspaceID* | string | The Log Analytics workspace ID associated with the SIEM. | 1b16698f-2df5-ed44-86b9ed-4b42c 1fe7ad9 |
| workspaceName* | string | The name of the Log Analytics workspace associated with the SIEM. | theWorkspaceName |

Finally, in the bottom right, click the "Save" button. Afterward, a popup will appear confirming the SIEM's creation, and the user will be redirected to the list of SIEMs.

4.0.2.1 Viewing, modifying, and deleting

To view a SIEM, next to it, click on the kebab menu and then click "Show". At this point, the user is on the "Show SIEM" page where data can be viewed but not modified. After viewing the data, in the bottom right, click the "Close" button. After this, the user is back on the list of SIEMs.

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows a dark-themed web interface for managing Cloud SIEMs. At the top, there's a header with the Leonardo logo, the date (03 December 2022), and user information (cmp_admin, DEFAULT, English). Below the header, a navigation bar includes icons for cloud, network, and security. The main title is 'Security Informations & Events Managers'. Underneath, a sub-header says 'SIEMs list'. A table lists one entry: 'Azure Sentinel CMP' (Type: SENTINEL, UUID: b8e937d1-9b23-4d90-963c-48ccd2f03828, Creation Date: 02/12/2022 17:16:44). To the right of this table is a vertical menu with three options: 'Show', 'Edit', and 'Delete'. A red arrow points from the bottom right towards the three-dot menu icon.

Figura 90 – Access to SIEM in display mode

This screenshot shows the detailed view of a specific SIEM instance. The top navigation bar is identical to Figura 90. The main title is 'Show SIEM b8e937d1-9b23-4d90-963c-48ccd2f03828'. The page is divided into sections: 'General properties' (Name: Azure Sentinel CMP, Type: SENTINEL, UUID: b8e937d1-9b23-4d90-963c-48ccd2f03828, Creation Date: 2022-12-02T17:16:44.02) and 'SIEM's properties' (clientId, clientSecret, resourceGroup: sentineltest).

Figura 91 – SIEM in visual mode

To modify a SIEM, next to it, click on the kebab menu and then click "Edit". At this point, you are on the "Edit SIEM" page where fields can be modified.

After modifying the fields of interest, in the bottom right, click the "Update" button. After this, a popup will appear confirming the SIEM's modification, and the user will be back on the list of SIEMs.

The screenshot shows a dark-themed web interface for managing Security Information & Event Managers (SIEMs). In the center, there is a table titled "Security Informations & Events Managers" with one row visible:

| Name | Type | UUID | Creation Date |
|--------------------|----------|-------------------------------------|---------------------|
| Azure Sentinel CMP | SENTINEL | b8e937d1-9b23-4d90-963c-48cc2f03828 | 02/12/2022 17:16:44 |

On the far right of the table, there is a vertical ellipsis menu (three dots) which is expanded. Two red arrows point to this menu: one from the top right towards the ellipsis, and another from the bottom right towards the "Edit" option. The "Edit" option is highlighted with a black box and shows a pencil icon. Other options in the menu include "Show" (eye icon) and "Delete" (trash bin icon).

Figura 95 – Confirm to delete a SIEM

4.0.3 Secrets Managers

The user can create a secret manager by clicking on the tab depicting a padlock, located in the top bar, as shown in the figure.

After accessing the “Secret Manager” page, at the top right, click on the burger menu and then click on “Add a secret manager”

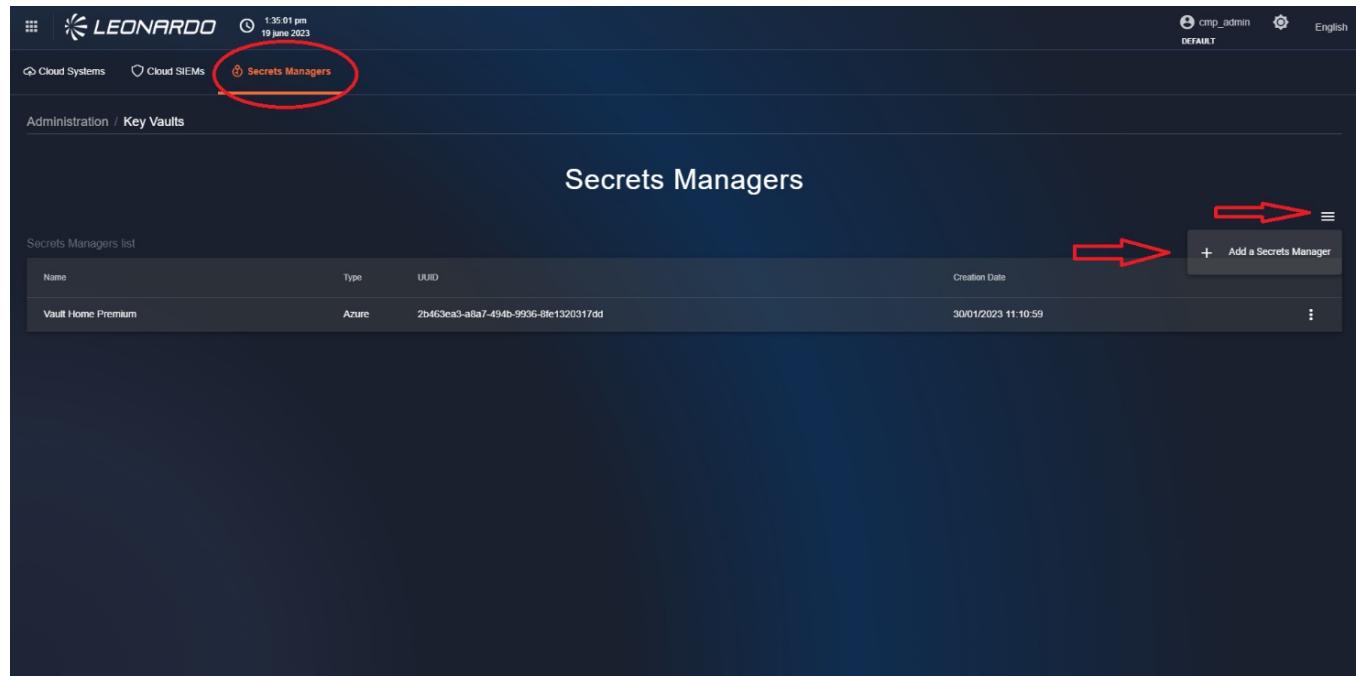

Figura 96 – Add a new Secret Manager

Here is an example form for adding a Secret manager from an Azure type provider (selectable from the "Type" dropdown at the top of the page).

After entering all the required parameters, click the "Save" button at the bottom to complete the entry, and the user will be redirected to the "Secret manager" list where the newly created component can be viewed.

4.0.3.1 Azure Key Vault

The specific parameters for an Azure Key Vault to be entered are shown in the table:

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows a configuration interface for an Azure Key Vault. At the top, there are navigation links for Cloud Systems, Cloud SIEMs, and Key Vaults, with Key Vaults being the active tab. The main area contains two sections: 'General properties' and 'Secrets Manager's properties'. The 'General properties' section has a single required field 'Name *'. The 'Secrets Manager's properties' section contains six required fields: 'clientid *', 'clientSecret *', 'resourceGroup *', 'subscriptionId *', 'tenantId *', and 'privateUrl *'. A 'Save' button is located at the bottom right of the form.

*Figura 97 – Configuration mask Azure
key vault*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------|----------|---|---|
| clientId * | string | Unique identifier of the key vault. | 09f8985-9f89d0-4623-98982-5a510fd3d2 |
| clientSecret * | password | A secret key used to authenticate the application with the Key Vault. | np6Kc_.xwsvhR8Q~rP05fCqYNXmbqfMGQLOEzfMt |
| resourceGroup * | string | The Azure resource group where the Key Vault is hosted. | resourceGroupName |
| subscriptionId * | string | The Azure subscription ID associated with the Key Vault. | 09f8985-9f89d0-4623-98982-5a510fd3d2 |
| tenantId | string | The Azure tenant ID associated with the Key Vault. | 09f8985-9f89d0-4623-98982-5a510fd3d2 |
| privateUrl | string | Private access URL to the Key Vault. | https://vault.azure.net/vault |

4.0.3.2 Google Secret Manager

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The specific parameters for the Google Secret Manager to be entered are shown in the following table:

*Figura 98 – Google Secret Manager
configuration mask*

Parameters indicated with * are mandatory.

| Name | Type | Description | Example |
|------------------|--------|---|--|
| kmsProjectId * | string | The Google Cloud Platform (GCP) project ID associated with the Google Cloud Key Management Service (KMS). | 5a85c16c6ad-49db-a58e-e209-ee1f53d6c6b |
| serviceAccount * | object | Connection file generated from the Google console. | service_account.json |

It is possible to manually enter the parameters present in the “service_account.json” file into the displayed form if you do not want to upload it. All parameters are mandatory:

| Name | Type | Description | Example |
|--------------|--------|--|-------------------|
| Type | string | Enter the name of the configured authentication type. | service_account |
| project_id * | string | Enter here the unique ID of the project associated with the service account. | Theproject-367810 |

| Name | Type | Description | Example |
|------------------------------|----------|--|---|
| private_key_id * | string | Enter here the unique ID of the service account's private key. | 55cb5cf903ee93ea1e9c294a07e46e0af0633e6 |
| private_key * | password | Contains the service account's private key in PEM format. It is essential for authenticating the service account to Google Cloud APIs. | -----BEGIN PRIVATE KEY-----MIIJQgIBADANB... |
| client_e-mail * | string | The unique email address of the service account. It is used to identify the service account when authenticating to Google Cloud APIs. | user@dominio.com |
| client_id * | string | The client ID of the service account. It is a unique identifier used to identify the service account in Google Cloud. | 104822473261100667392 |
| auth_uri * | string | The URI used for authenticating the service account to Google Cloud APIs. | https://accounts.google.com/o/oauth2/auth |
| token_uri * | string | The URI used to obtain an access token for the service account. | https://oauth2.googleapis.com/token |
| auth_provider_x509_cert_url* | string | The URL of the X.509 certificate used for authenticating the service account. | https://www.googleapis.com/oauth2/v1/certs |
| client_x509_cert_url * | string | The URL of the X.509 certificate in the client. | https://www.googleapis.com/robot/v1/metadata/f543/myserviceaccount%40projectName.gserviceaccount.com |

4.0.3.3 Viewing, modifying, and deleting a system

It is possible to view the data of a Secret Manager, within the list, by clicking on the kebab menu corresponding to a manager, and then on "Show".

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows the 'Secrets Managers' section of the platform. It lists a single entry: 'Vault Home Premium' of type 'Azure'. The 'Creation Date' is 30/01/2023 11:10:59. To the right of the list is a context menu with three options: 'Show', 'Edit', and 'Delete'. Two red arrows point from the text below to the 'Show' and 'Edit' buttons in the menu.

Figura 99 – Access to the manager in display mode

On this page, you can view the Provider's configuration.

The screenshot shows the 'Secrets Manager's properties' dialog box. It contains several configuration fields:

- clientId: 1b42c98f-2df5-446b-89ed-4b1fe7166ad9
- clientSecret: sentineltest
- resourceGroup: sentineltest
- subscriptionId: 09f837d5-2dd0-4623-9b82-5a510fd983d2
- tenantId: 70fc5a88-7c0f-42ad-9db2-35d1222673c6
- privateUrl: https://vaulttestcmp.vault.azure.net/

A 'Close' button is located at the bottom right of the dialog.

Figura 100 – manager in display mode

To return to the Secret manager page, click the "Close" button in the bottom left.

At this point, the user will be on the Secret manager page.

To modify the data of a Secret manager within the list, click on the kebab menu corresponding to a Cloud Provider, and click on "Edit".

The screenshot shows a dark-themed web interface for managing secrets. At the top, there are navigation links for 'Cloud Systems', 'Cloud SIEMs', and 'Secrets Managers'. The 'Secrets Managers' link is underlined, indicating it is the active page. Below the navigation, a breadcrumb trail shows 'Administration / Key Vaults'. The main title 'Secrets Managers' is centered above a table. The table has columns for 'Name', 'Type', 'UUID', and 'Creation Date'. One row is visible, showing 'Vault Home Premium' as the name, 'Azure' as the type, '2b463ea3-a8a7-494b-9996-8fe13203170d' as the UUID, and '30/01/2023 11:10:59' as the creation date. To the right of the table, a context menu is open over the first row. The menu items are 'Show' (with a magnifying glass icon), 'Edit' (with a pencil icon, which is highlighted with a red arrow from the image), and 'Delete' (with a trash bin icon).

Figura 101 – Access to the manager in edit mode

After doing so, the user will be on the Cloud Provider page in edit mode where data can be modified. To return to the Cloud Provider page, click the "Save" button in the bottom left. At this point, the user will be on the Cloud Provider page.

To delete a "Secret manager", within the list, click on the kebab menu at a Secret Manager, and click on "Delete".

5 Dashboard

Accessing the SCMP, the homepage presents a summary of four sections: inventory, monitoring, costs, and security.

In particular:

- The Inventory section shows:
- A pie chart regarding SCMP resources (for each resource of a single provider, an SCMP type instance is created, so the data can be considered as the sum of all resources present across all providers).
- A pie chart for each provider type.
- The monitoring section shows the most populated metrics with their relative usage.
- The costs section shows a summary of costs for the last 30 days.
- The security section shows the most severe vulnerabilities.

The title of each section is clickable and leads to the specific dashboard.

Figura 108 – Dashboard section

"Inventory"

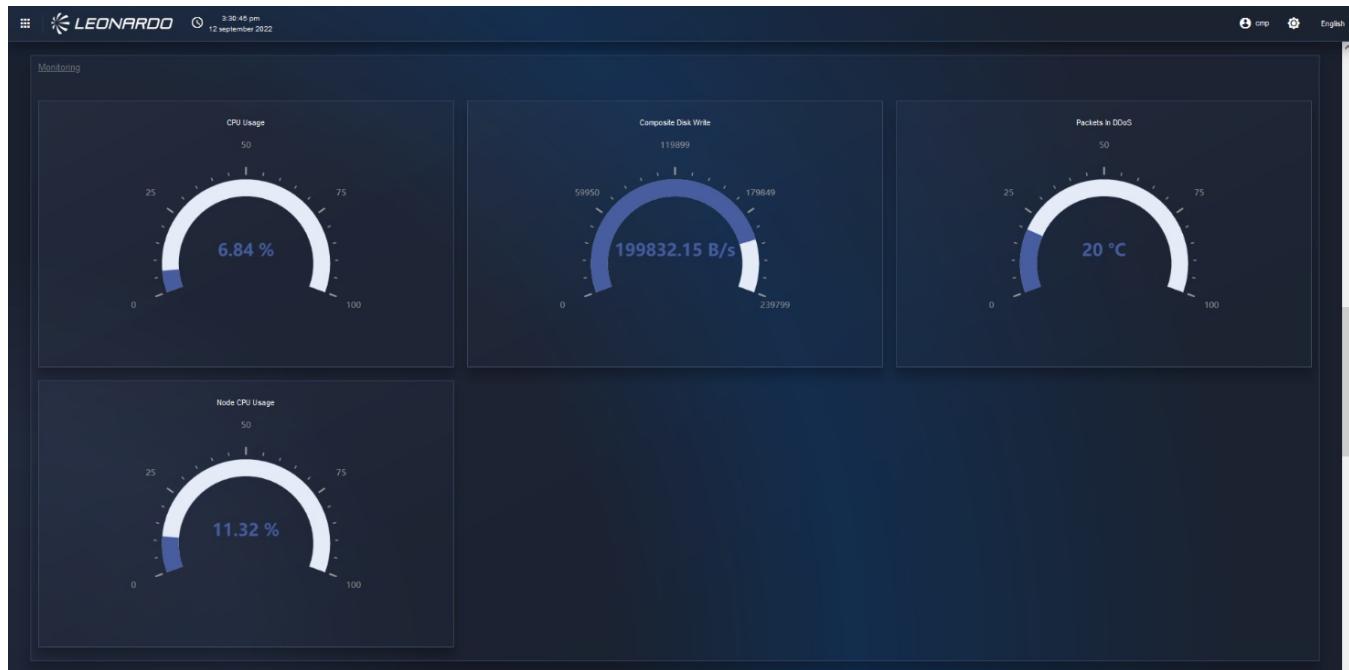

Figura 109 – Dashboard section
"Monitoring"

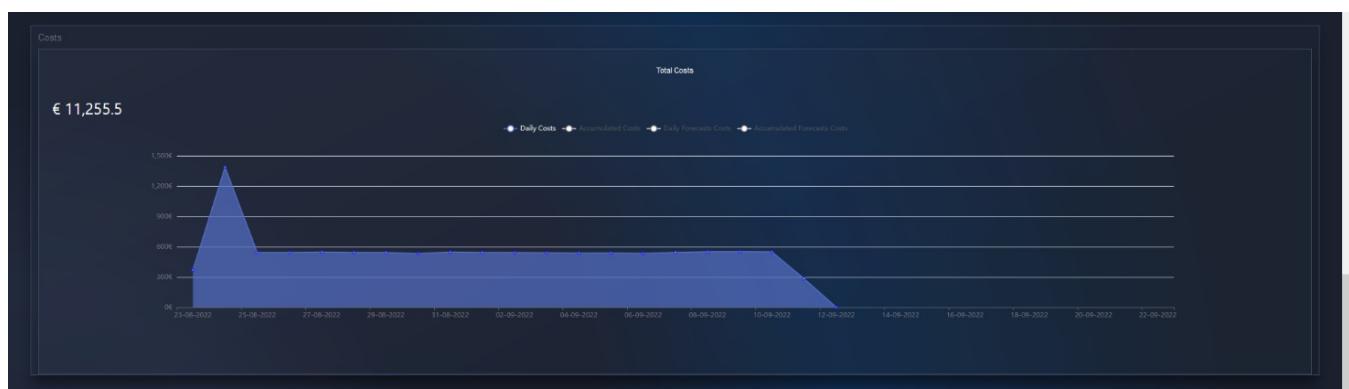

Figura 110 – Dashboard section "Costs"

*Figura 111 – Dashboard section
"Security"*

6 Inventory

The inventory functionality collects metadata of installed assets across all providers present on the SCMP.

The assets currently present are:

- Virtual Machine
- Data Stores
- Networks
- Clusters
- Edge
- Security
- Others

Heterogeneous metadata, coming from different sources, is then normalized by the SCMP to allow for standard visualization.

Inventory is accessible from the “Inventory” menu item.

Figura 112 – Accesso a Inventory

6.0.1 Inventory Dashboard

The Dashboard page provides a global and aggregated view of all resources, while the menus above the breadcrumb path allow filtering by resource type. The functionalities available on the various pages are identical.

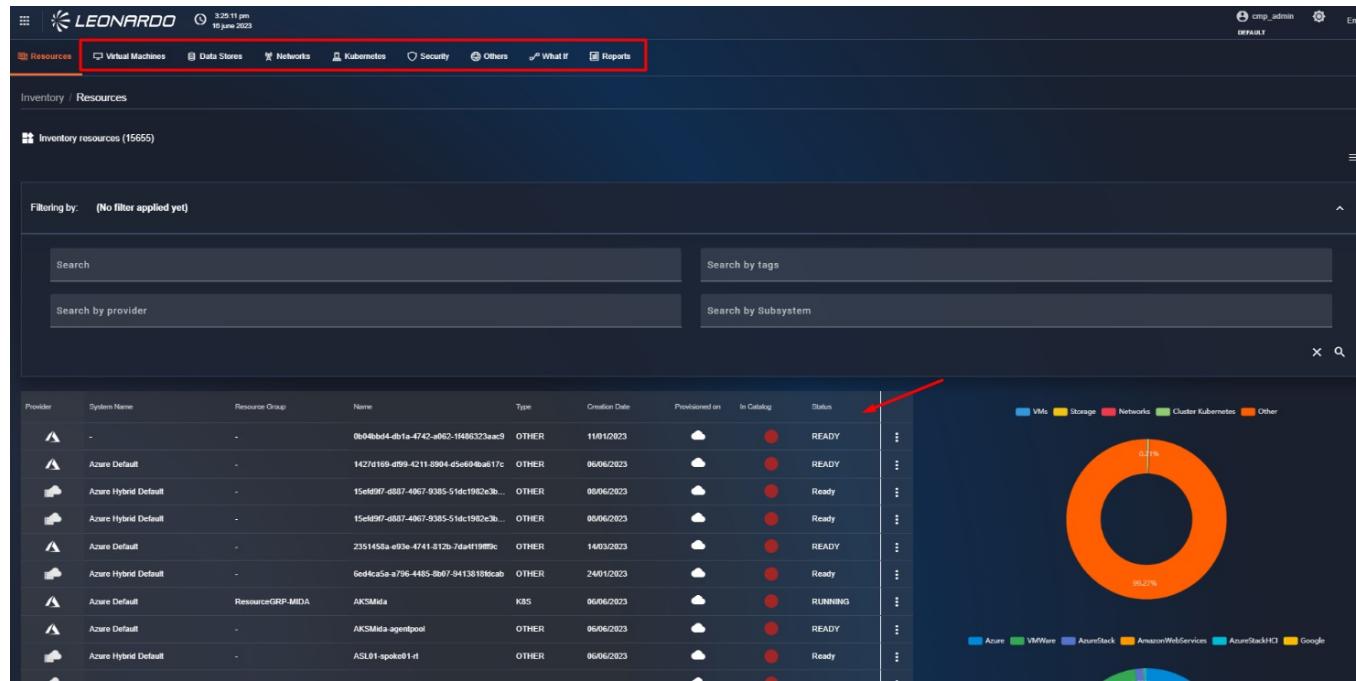

Figura 113 – dashboard di inventario

Within the “Resources” tab page, there are filters; in the first filter at the top, it is possible to search for resources by name, resource group, Provider, etc. It is also possible to filter resources by “Provider” and “Subsystem”.

The last filter allows searching by tag. Click on it and select a tag, then by clicking the button depicting a magnifying glass, the page will refresh and display the list of filtered resources.

Figura 116 – Dettaglio risorsa

And at the bottom, the asset's relationships with other SCMP elements, as shown in the figure:

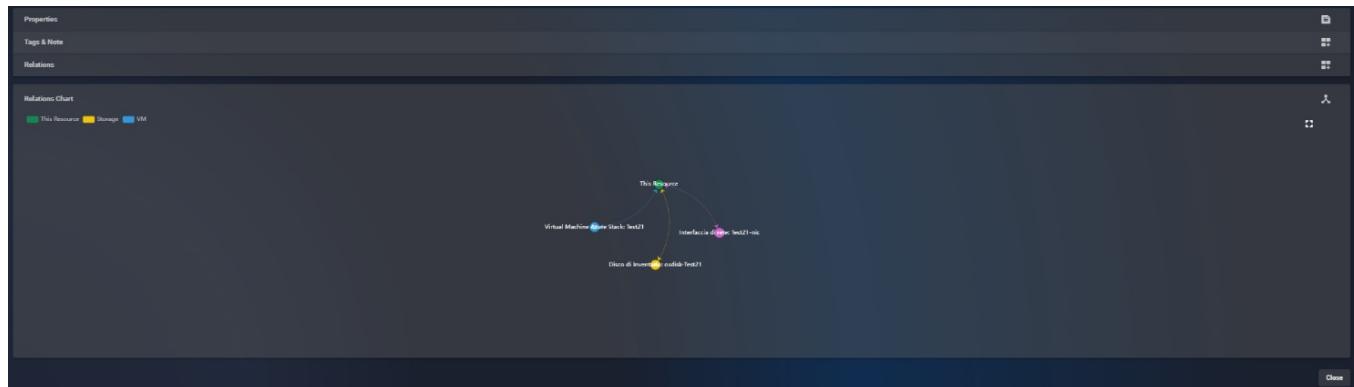

Figura 117 – Grafico delle relazioni

The relationship graph allows navigating between resources by directly clicking on the circle of the linked resource, in order to land on its details.

Furthermore, it is possible to edit some attributes, such as tags, as shown in the figure:

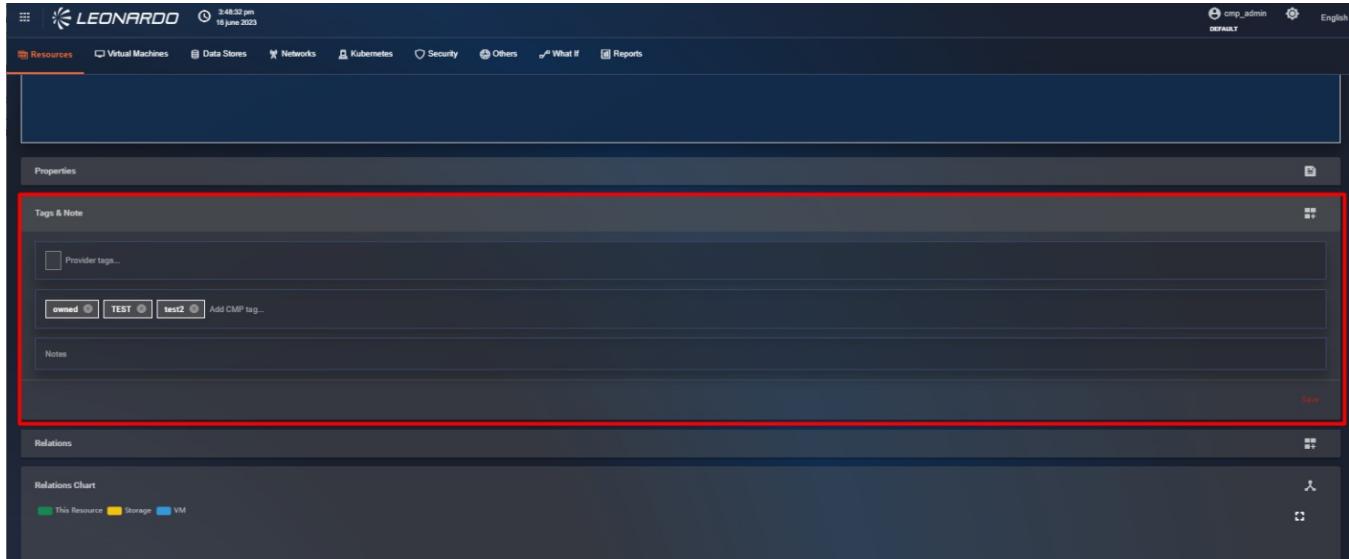

Figura 118 – Selezione del tag

For the “Provider Tags...” field, it is not possible to select a tag, as tags in this section are retrieved directly from the subsystem.

The “Add SCMP Tag...” field allows selecting from a list or manually entering one. Inside the tag, there is an “X” symbol to delete it.

It is possible to add multiple tags to the resource.

Subsequently, in the bottom right of the “Tags & Note” section, click on the “Save” button to save the change, and a banner will appear at the bottom indicating the tag has been saved.

Scroll the page to the bottom, and click on the “Close” button located on the right to return to the “Dashboard” tab page.

6.0.1.2 Actions on inventory machines

For inventory machines from supported providers, a new button available in the table context menu called “Manage” can be used to perform basic operations on the machines.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links like 'Resources', 'Virtual Machines', 'Data Stores', 'Clusters', 'Edge' (which is highlighted), 'Networking', 'Security', 'Others', 'What If', and 'Reports'. Below the navigation is a search bar and a 'Search by Subsystem' input field. The main area displays a table of resources with columns: Provider, Name, System, Size, Resource Group, Type, Creation Date, Provisioned on, In Catalog, and Status. Two entries are listed: 'marco01' and 'rheledge01'. For each entry, there's a context menu with options like 'Show' and 'Manage'. A red arrow points to the 'Manage' button for the 'rheledge01' entry. To the right of the table, there's a large circular progress bar labeled 'REDHATEDGE' with '100%' completion.

*Figura 119 – Accesso alla funzionalità
di "management"*

From this resource detail page, the following operations can be performed using the menu at the top of the page; the operations available on the machines may vary depending on the provider:

Azure Stack HCI

- Start machine
- Stop machine
- Resize machine
- Add storage disks
- Add network interface
- Delete resource
- Remove disk from resource
- Remove network interface

Red Hat Edge

- Update an EDGE device image

Operations are indicated in white when they can be executed and in gray when they are not supported or unavailable for the resource.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Resources, Virtual Machines (which is the active tab), Data Stores, Networks, Clusters, Security, Others, What If, and Reports. Below the navigation bar, the page title is "Inventory / Virtual Machines / Manage 64a526744bfbe4f2c8b9ff86". The main content area is titled "Manage Virtual Machine di Inventory". It has two main sections: "Virtual Machine (v1.1)" on the left and "Details" on the right. The "Virtual Machine" section contains fields for System (CMP), State (POWERED_OFF), Update Date (05/07/2023), Provider (VMWare), and Resource Link (https://10.129.5.31/ui/app/home). The "Details" section shows Monthly Cost (0.00), Name (DNS-Server01), OS Type (-), and Category (vm-4019). Below these sections is a "Disks" section with a table for "Disk CMP_01", showing Size (GB) (-), IOPS (-), Throughput (-), and State (ATTACHED). The entire screenshot is framed by a thick black border.

*Figura 120 – Operazioni sulle macchine
di inventario*

6.0.1.3 “Cluster Explorer” functionality

Cluster Explorer is a powerful feature that allows users to view namespaces within a cluster in detail. This function provides a comprehensive overview of data and resource organization within the cluster, facilitating navigation and management of complex environments.

With Cluster Explorer, users can:

- View the complete list of namespaces in a cluster: Get a quick overview of all available namespaces in the cluster.
- Examine the details of each namespace: Access complete information about each namespace, including name, description, labels, and resource quotas.
- Filter and search namespaces: Quickly find specific namespaces using advanced filtering and search criteria.

To access the functionality, select the “Clusters” item from the horizontal menu of the Inventory module.

*Figura 121 – Accesso alla funzionalità
di cluster explorer*

Inside the page, a list of clusters present within the subsystems configured in the system will be displayed. Clicking on one of them will open a modal with the general details of the cluster.

Figura 122 – Finestra di dettaglio del cluster

We can notice that at the bottom right there is a “cluster explorer” button; pressing it will redirect us to the cluster Dashboard. This page can also be accessed using the “cluster explorer” button available in the “three dots” context menu present for each cluster in the list of results.

Within this page, we can view a graph representing the distribution of namespaces within the cluster; on the right, the legend of namespaces with the number of active pods is displayed.

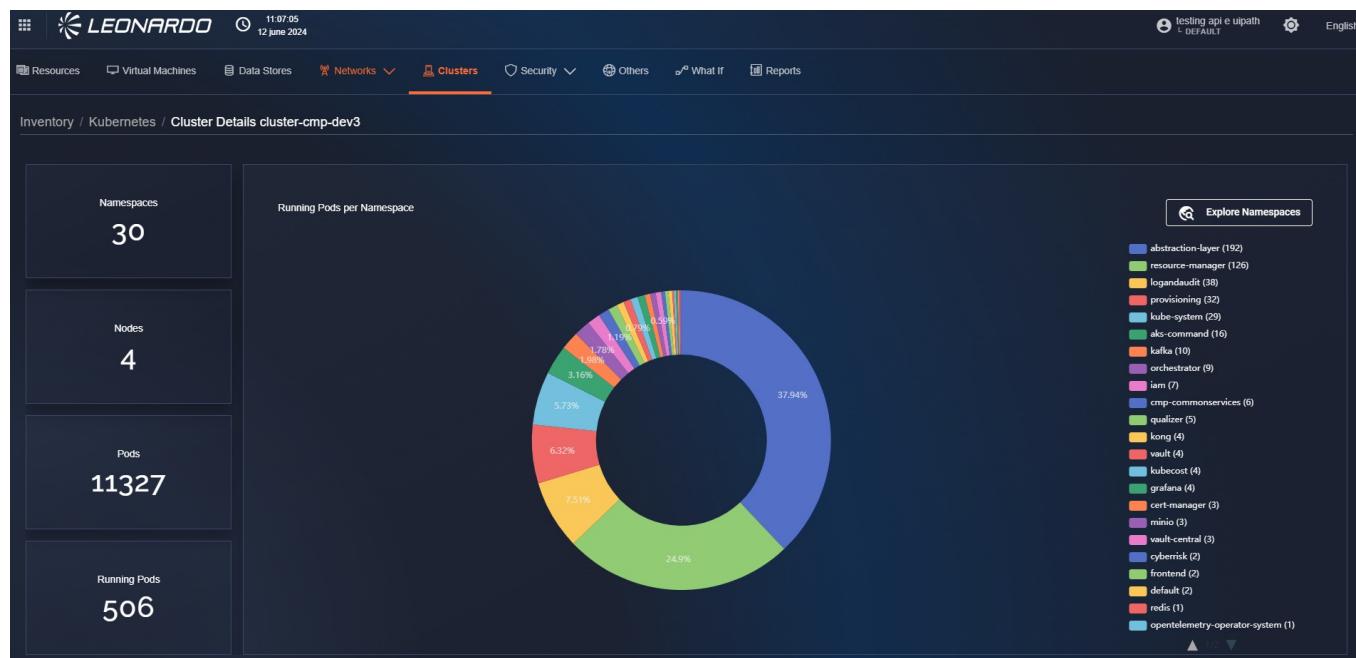

Figura 123 – Dashboard del “cluster explorer”

We can drill down into the details of namespaces using different components on the page:

it is possible to click on the “Explore namespaces” button at the top right or click on the number of namespaces displayed at the top left to view the namespace exploration page without filters. If we want to directly view the details of a namespace present in the graph, it is possible to click on the corresponding slice, and the detail page will be automatically filtered for the selected namespace.

Leonardo Cyber & Security Solutions

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with various tabs like Resources, Virtual Machines, Data Stores, Networks, Kubernetes, Security, Others, What If (which is currently selected), and Reports. Below the navigation bar, a breadcrumb path shows 'Inventory / What If'. The main area has a dark background with two large rectangular buttons. The left button, highlighted with a red border, contains a circular refresh icon and the text 'Migrate to another provider'. The right button contains a server icon and the text 'Change resources capacity'. Above these buttons, the text 'What do you want to simulate today?' is displayed. Below the buttons, the text '... or take a look to a previous simulation:' is shown. A table below lists previous simulations with columns for Name, Creation Date, Destination Providers, Status, Export, and Options. The table includes five entries for 'Multiple Provider Migration' with different creation dates and destination providers (Azure, Google, Azure, Google). At the bottom of the table, there are pagination controls.

| Name | Creation Date | Destination Providers | Status | Export | Options |
|-----------------------------|------------------|-----------------------|--------------------|-----------------------|----------------|
| Multiple Provider Migration | 06/06/2023 09:35 | Azure | Green | Download | ⋮ |
| Multiple Provider Migration | 06/06/2023 09:33 | Azure | Green | Download | ⋮ |
| Multiple Provider Migration | 06/06/2023 15:36 | Azure | Green | Download | ⋮ |
| Multiple Provider Migration | 06/06/2023 16:44 | Google | Green | Download | ⋮ |
| Multiple Provider Migration | 06/06/2023 16:43 | Azure, Google | Green | Download | ⋮ |

Figura 129 – Accesso alla funzionalità
"What If: Migrate Provider"

After doing so, the user will find themselves on the "Start" page of step 1 for simulating resource migration from one cloud provider to another.

On the left, in the "Select Resources to migrate" box, the user can search for resources using three types of filters, including:

- "Search" which allows searching for a resource by name;
- "Search by Type" to obtain resources by selecting the resource type;
- "Search by tags" which allows searching for resources using one or more tags.

Within the resource table, only resources that have a relationship in the catalog will be displayed.

Within the resource table, click on one of them and, using the "drag and drop" technique, drag it to the right, into the box titled "Currently selected".

A maximum of three resources can be included per simulation.

Subsequently, in the bottom right, click on the "Next" button.

Figura 130 – Scelta delle risorse in cui effettuare la migrazione del provider

After doing so, the user will find themselves on the “Destination Providers” page of step 2, where it is possible to click on the checkbox corresponding to one or more providers. Based on the selected provider type, the value in the ‘Option selected’ field at the bottom left will be automatically populated with the names of the selected providers.

Subsequently, in the bottom right, click on the “Next” button, while to return to the “Start” page of step 1, click on the “Back” button.

Figura 131 – Scelta del Cloud Provider

in cui migrare le risorse

After clicking the “Next” button, the user will find themselves on the page of step 3 titled “Details”.

On this page, cards will be displayed, one for each subsystem selected in step 2.

In each card, on the left, there is a list of regions available for the cloud provider, and on the right, an empty section is displayed.

Selecting one or more regions in the right section (in red in the figure) will display a menu in the right section that allows selecting the type of cost to apply (in yellow in the figure). Selecting the “Consumption” type requires no further parameters, while selecting the “Reservation” type, to the left of the field, it will be possible to choose the Reservation period (in yellow in the figure).

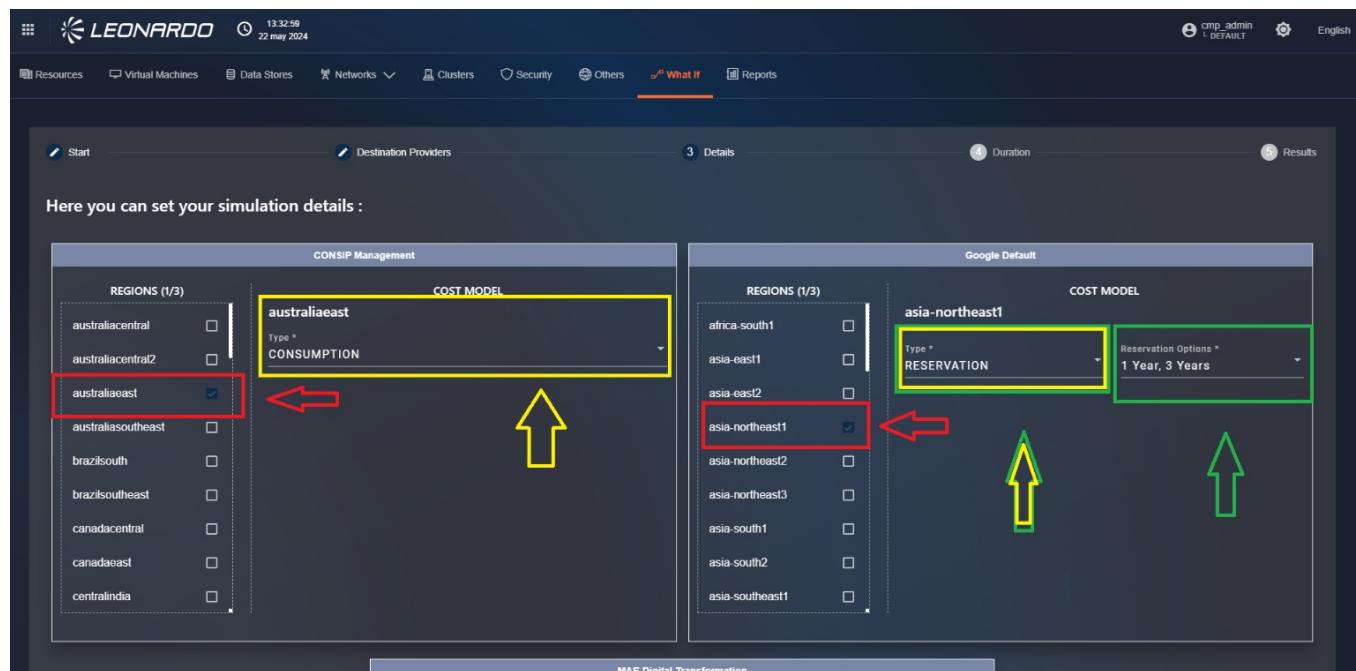

Figura 132 – Selezione della "Regione"
e del "Cost Model"

After clicking the “Next” button, the user will find themselves in step 4 titled “Duration”.

From the “Duration” page of step 4, select an interval for the simulation among:

- “One Month”
- “Six Months”
- “One Year”

To return to the “Details” page, in the bottom right, click on the “Back” button. Instead, to proceed with the simulation, click on the “Launch Simulation” button.

Figura 133 – Selezione dell’intervallo di tempo

After clicking the “Launch Simulation” button, the user will find themselves on the “Results” page of step 5.

Within the “Results” page, at the top, the “Simulation parameters” box can be viewed, which contains a summary of the parameters used. (in yellow in the figure)

Below the “Summary” box, there are different sections, one for each destination provider (in red in the figure), and inside, we can view the list of resources that can be migrated to the provider (in green in the figure). Clicking on one of them will display a histogram graph. In this graph we can note:

- A line parallel to the X-axis indicating the current cost of the resource.
- A series of bars (one for each region and selected cost type) that will be red when the destination price is higher than the starting price or green when the price is lower than the current cost of the resource; hovering over one of them will display its reference.
- A summary table of the selected cost types, which is used to generate the bar chart.

It is possible to view details for other simulations (in purple in the figure) using the procedure just described.

To exit the simulation without saving, in the bottom right, click on the “Close” button.

To save the simulation, click on the “Save” button next to the “Close” button, and then click on “Confirm”.

After clicking a button, the user is redirected to the “What If” tab page.

another provider"*

6.0.2.2 Scenario “What If”: Change Resource Capacity

This functionality allows comparing the costs of a resource in case of modification of its technical characteristics.

Still from the “What If” tab page, in the top right, click on the “Change resources capacity” box.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there are two main buttons: 'Migrate to another provider' on the left and 'Change resources capacity' on the right, both enclosed in red boxes. Below these buttons, a message reads "... or take a look to a previous simulation:". Underneath this message is a table titled 'Filter simulations' with columns for Name, Creation Date, Destination Providers, Status, Export, and Options. The table lists five entries, all of which have a green status icon and a download arrow icon. The last entry is for Google.

| Name | Creation Date | Destination Providers | Status | Export | Options |
|-----------------------------|------------------|-----------------------|--------------------------------------|--------|-------------------------------------|
| Multiple Provider Migration | 16/06/2023 16:39 | Azure | ● | | ⋮ |
| Multiple Provider Migration | 16/06/2023 09:35 | Azure | ● | | ⋮ |

Figura 137 – Accesso alla funzionalità
"What If: Change resources capacity"

After doing so, the user will find themselves on the "Start" page of step 1.

On the left, in the "Select Resources to change" box, the user can search for resources using three types of filters, including:

- "Search" which allows searching for a resource by name;
- "Search by Type" which allows obtaining resources by selecting the resource type;
- "Search by tags" which allows searching for resources using one or more tags associated with them.

The resource table will only show resources that, within the SCMP catalog, have more than one "Relationship" with different sizes but belong to the same region, price type, and operating system.

In the bottom left, there is the resource table, which can be filtered based on the parameters entered in the filter(s). Within the resource table, click on one of them and, using the "drag and drop" technique, drag it to the right, into the box titled "Currently selected:".

A maximum of three resources can be included per simulation.

Subsequently, in the bottom right, click on the "Next" button.

Figura 138 – Selezione delle risorse da cui modificare le capacità

After doing so, the user will find themselves on the “Resource Provider” page of step 2, where it is possible to modify the size of one or more resources.

Within the “Resource Provider” page of step 2, for a resource, click on the dropdown menu in the “Size” column and select a different size from the initial one.

After that, in the bottom right, click on the “Next” button to continue the simulation.

To return to the “Start” page of step 1, click on the “Back” button.

Figura 139 – Modifica della size di una risorsa

After clicking the “Next” button, the user will find themselves on the “Duration” page of step 3.

Within the aforementioned page, it is necessary to select an interval for the simulation.

After that, in the bottom right, click on the “Launch Simulation” button.

To go back, click on the “Back” button; in this way, the user will find themselves on the “Resource Provider” page of step 2.

Figura 140 – Selezione dell’intervallo per la simulazione

After clicking the “Launch Simulation” button, the user will find themselves on the “Results” page of step 4.

Within the “Results” page, at the top, there is a “Summary” box that advises whether to modify the size of the resources. Below, there is an histogram graph, where the purple bar represents current costs, while the green bar represents target costs.

To save the simulation, click on the “Save” button next to the “Close” button, and then click on “Confirm”. After doing so, the user is redirected to the “What If” page.

To exit the simulation without saving it, in the bottom right, click on the “Close” button. After doing so, the user will find themselves on the “What If” page.

Secure Cloud Management Platform

Simulation parameters:

- Resources: vm-default (AmazonWebServices/mida-database-vm (Azure))
- Destination Providers: Azure Default (Azure)
- Destination Providers Region: uscentral
- Destination Providers Cost: CONSUMPTION
- Duration: One Year

Summary:

Moving these 2 resources to these providers you would lose -199.99% (-1549.13€) compared to the actual costs.
ADVICE: It's suggested to remain with actual provider.

Details:

| Resource | Actual Provider | Actual Type | Actual Price Consumption | Actual Provider AZURE | Estimated Cost | Saving Percentage |
|------------------|-----------------|-------------|--------------------------|-----------------------|-------------------------|-------------------|
| mida-database-vm | AZURE | LINUX | Consumption | West Europe | £968.54 (0.11 / 1 Head) | +19.99% |
| VM-PGP-Class | AZURE | | | | £211.43 (0.02 / 1 Head) | +19.99% |
| vm-default | AZURE | | | | £474.60 (0.01 / 1 Head) | +19.99% |

Figura 141 – Parametri di configurazione e consiglio sulla simulazione

6.0.2.3 What If scenario Export

For a simulation of a resource size modification, it is possible to export it in PDF, CSV, and JSON format.

Within the “What If” page, at the bottom, there is a table of simulations; click on the “Capacity” button located in the top right corner of the aforementioned table.

After doing so, the table shows simulations regarding resource size modification.

Leonardo Cyber & Security Solutions

15 Dec 2025

Figura 147 – Creazione nuovo report

Once the report type is selected, click on the “Configure” button to select the providers to include in the report. In the newly opened window, we find the “Provider” field which allows selecting one or more pre-existing providers in the system. Subsequently, it is possible to select one or more subsystems to include in the report; if no providers are selected, no subsystem can be selected. Finally, there is a “tag” section to include only resources that have the entered tag.

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is currently selected. Below the navigation bar, there's a sub-menu for Inventory / Reports. A modal dialog box titled "Inventory" is open, showing configuration options for a report. The provider is set to "Azure, Google". The subsystem is "MAE LAB, CMPPROJECT-374610". The report type is set to "One-Shot". There are tabs for Ready and Scheduled. On the right side of the interface, there's a table listing reports with columns for Status (all listed as READY) and Actions (three-dot menu). The table includes rows for various providers like AZURE, AZURE, AZURE, GOOGLE, OPENSHIFT, and AZURE, GOOGLE, OPENSHIFT, KUBERNETES, OPENSHIFT.

Figura 148 – Configurazione del report

At this point, the user can choose between two different actions:

- Create a static report that will be saved in the system.
- Schedule a task that generates the report periodically.

To confirm the creation of a static report, verify that “One-Shot” has been selected for the “Report type” field and click the “Submit” button at the bottom.

After a loading period, the newly generated report will be visible in the list.

6.0.3.2.1 REPORT SCHEDULING

If, instead, you want to schedule automatic report execution, it will be necessary to select “Recurring” for the “Report Type” field. In this case, the window refreshes to show additional parameters for configuring the periodic report.

The parameters to enter are:

- Period: allows selecting the report sending frequency (hourly, daily, ...).
 - "Receive only if not empty" if selected, the file will not be sent when it contains no information.
 - Report Language: allows selecting the language used in the report.
 - File format: allows selecting one or more file types to include in the email.
 - User E-mails: allows entering an email address to send reports to. After entering an email, it is necessary to press "Enter" on the keyboard to confirm its insertion. Once pressed, the newly entered email will move to the box at the bottom, and the field will be cleared to allow the insertion of a new email, if necessary.

6.0.3.2.3 USING REPORTS

By clicking on a static report row, or using the “Show report” button available for scheduled reports, it will be possible to view the detail page of the selected report.

Within the Inventory report summary, there is a “Stats” section showing the number of disks, interfaces, networks, and virtual machines belonging to the selected provider.

Below the “Stats” section, the filters used by the user to generate the report are present.

Below the filters, there is a summary table of resources belonging to the providers. On the right, there are two buttons: “PRINT” and “EXPORT”.

Clicking on the “PRINT” button, a print preview modal appears. To print the report, click on the “Print” button in the bottom right; at this point, the printing of the report will start.

Clicking on the “EXPORT” button, it is possible to export the report in “.csv”, “.json”, or “.pdf” format.

To return to the “Results” tab, in the bottom right, click on the “CLOSE” button or in the top left, click on the left-pointing arrow, next to the report title.

7 Monitoring

The SCMP collects metrics from all cloud providers and aggregates them by macro categories.

This aggregation allows comparison between metrics from different providers.

By accessing the dashboard, we can see how this aggregation mechanism provides an overview of resource utilization, divided by provider and organized by associated resource type.

Within the functionality, it is possible to filter by resource type using the tab bar at the top, while for a general view, the dashboard can be used.

The monitoring module can be accessed via the dedicated menu. As shown in the figure:

Figura 155 – Access to the Monitoring Module

7.0.1 Monitoring Dashboard

At this point, the user will be on the "Dashboard" monitoring tab page.

Figura 156 – Monitoring Dashboard

7.0.1.1 Monitoring Section Filters

Within the page, a series of filters are available that can be selected simultaneously to filter the dashboard results.

The main filter is the display period, which can be found at the top right. Clicking on it will open a selection window (in yellow in the figure) where it will be possible to either enter a customized time range, using the "From" and "To" fields on the left, or select a "Smart" time range by directly clicking on the desired choice in the scrollable section on the right.

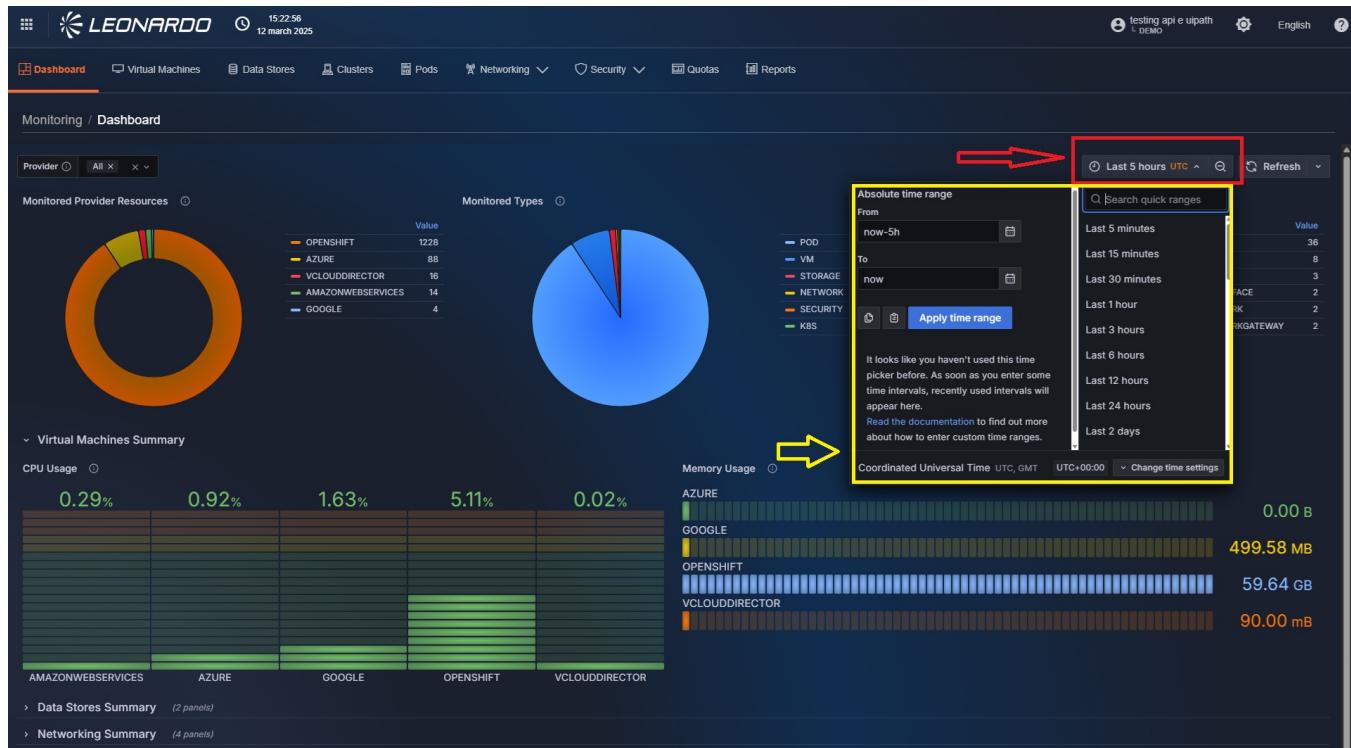

Figura 157 – Monitoring Time Filter

Additionally, a series of filters are available at the top left of the page, allowing users to filter the retrieved resources. Specifically, it is possible to filter by:

- Provider type
- Subsystem name.
- Resource name (only in detailed dashboards)

These filters allow for multiple values to be selected and can be combined to achieve the desired granularity.

Figura 158 – Monitoring Functionality

Filters

7.0.2 Quotas Dashboard

The Quotas dashboard, available in the "Quotas" tab, allows viewing the details of consumption and related limits applied to Vcloud type subsystems.

To access it, you need to click the button at the top of the tab bar.

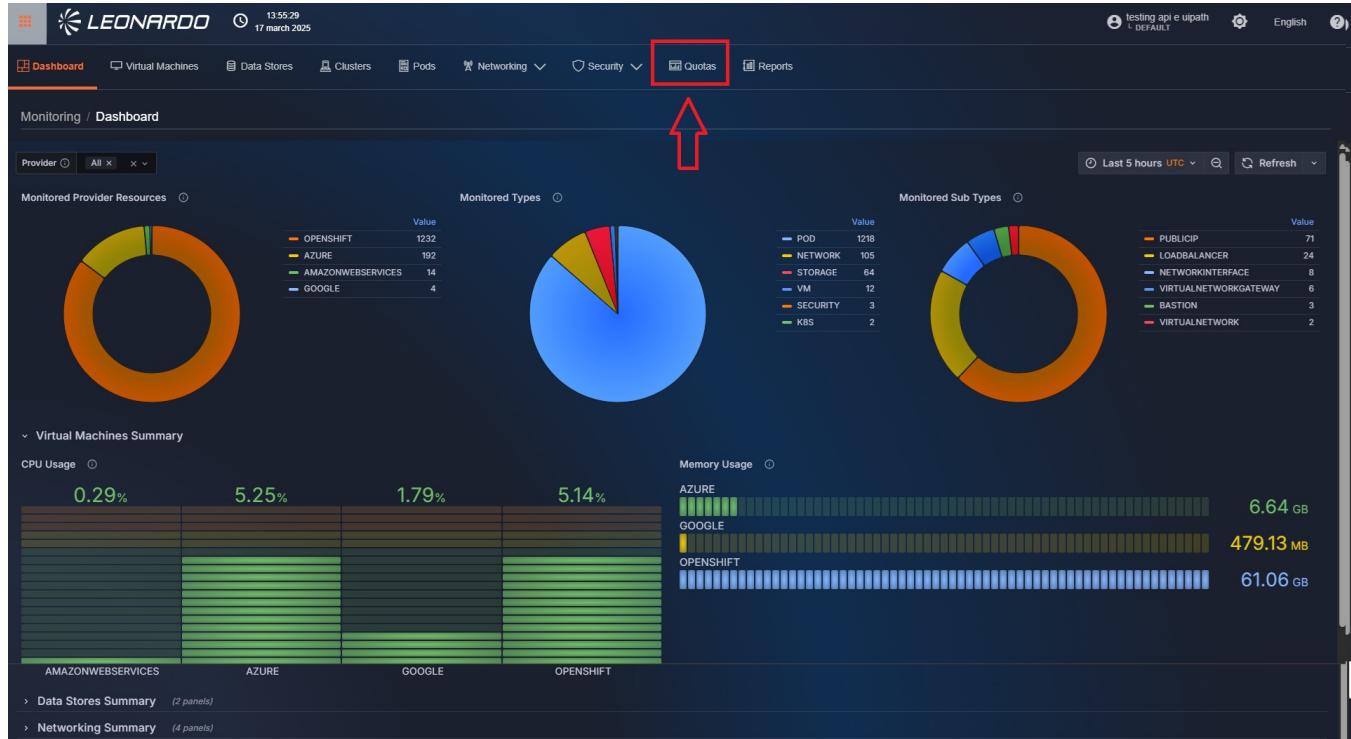

Figura 159 – Access to the Quotas section

At this point, the user will be on the "Quotas" monitoring tab page. At the top, we can see a filter bar, which allows filtering by provider or subsystem. Additionally, it is possible to view the filters for the chart using the "Show additional filters" button; these filters modify the chart's display. Below the filters, there is a table indicating the subsystem name and the quotas used, limits, and an average utilization divided by resource type. Finally, at the bottom, a time-based chart on the selected metric in the filters can be displayed.

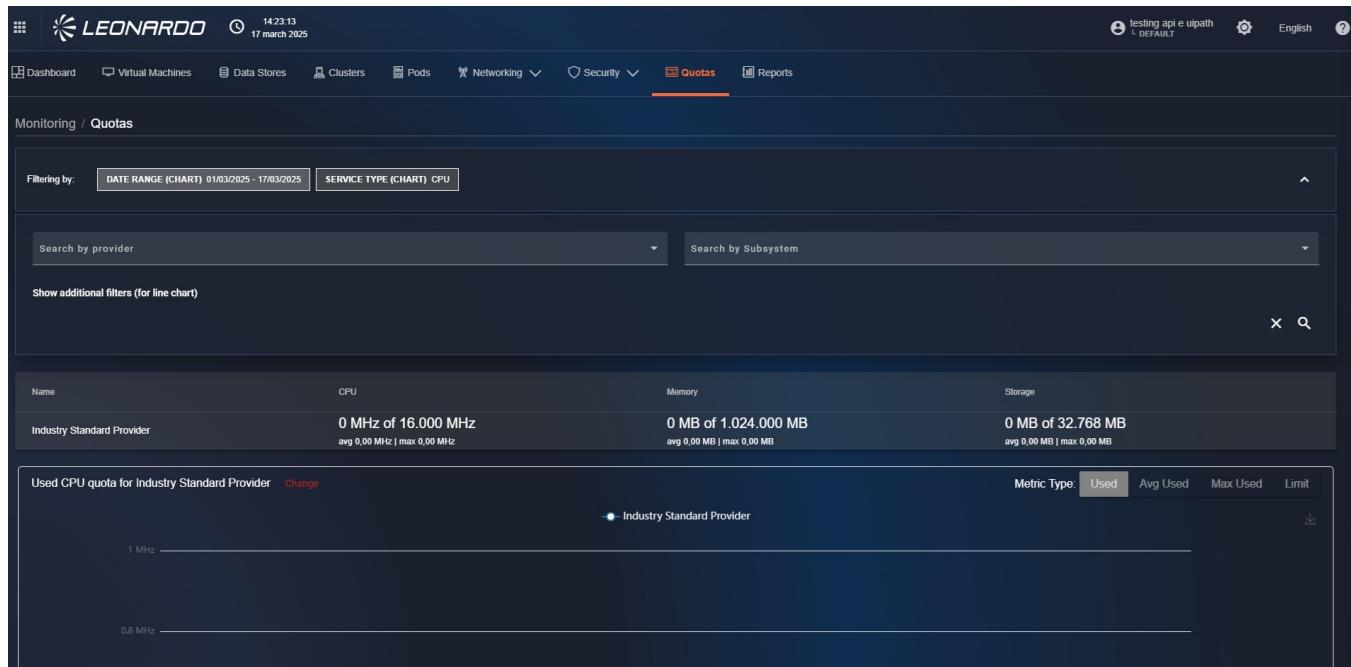

Figura 160 – Quotas Dashboard

7.0.3 Alarms on Quota Usage

To allow the user to receive notifications when quota usage thresholds are exceeded, an "Alerting" module has been included. To access it, you need to select the tab at the top of the Monitoring functionality.

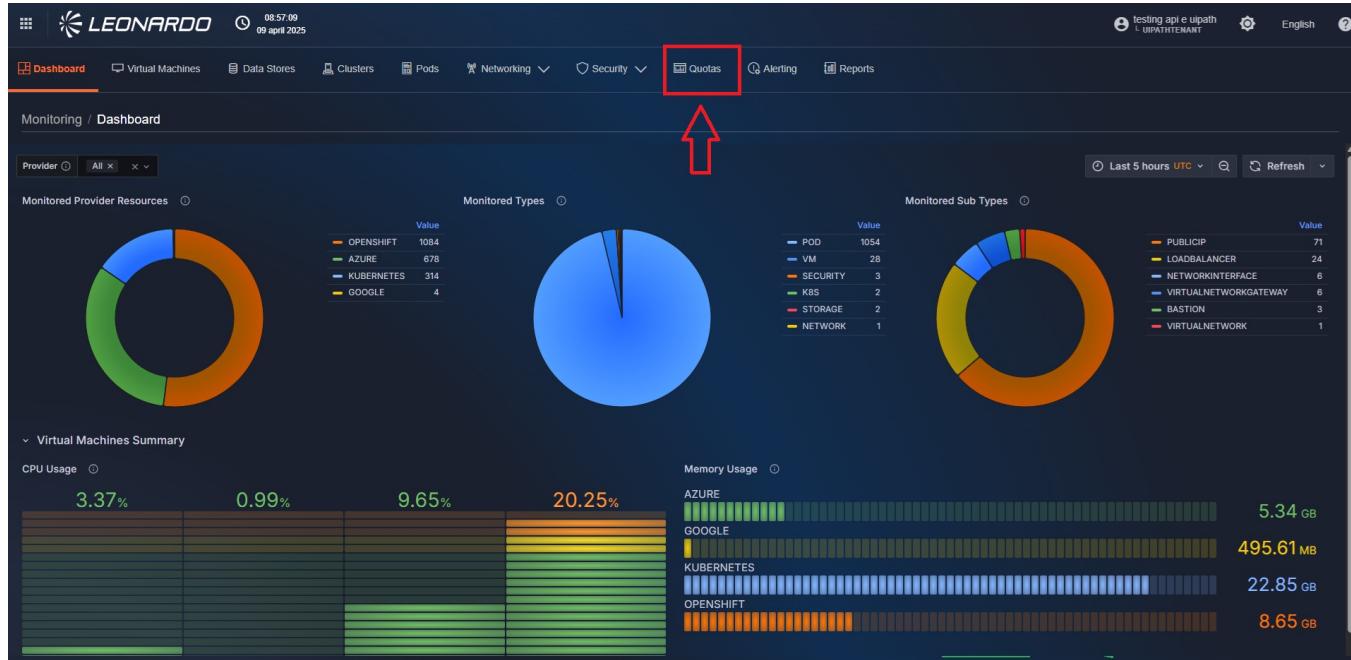

Figura 161 – Access to the Alerting system

Within the page, we find the list of "alerts" configured on the system, along with their respective configurations.

7.0.3.1 New Alert Creation

Using the menu available on the right, it is possible to add a new alert to the system. To do this, we select the displayed "New alert" option, and a configuration page will open.

| Alert Schedule | Alert Type | Alert Send Type | Creation Date |
|----------------|------------|-----------------|---------------------|
| Daily | Quota | Email | 27/03/2025 16:45:00 |
| Weekly | Quota | Email | 04/04/2025 14:24:08 |

Figura 162 – New Alert Creation

On the configuration page, all fields must be filled in, specifically:

- **"Alert type"**: Select the alert type
- **"Alert schedule"**: Indicates the frequency of checks to be performed
- **"Quota type"**: Select the quota type to monitor
- **"Threshold (%)"**: Enter the percentage beyond which the alert will be sent.
- **"Subsystems"**: Select one or more subsystems to monitor
- **"Alert send type"**: Select the type of alert to receive, via e-Mail or Rabbit queue (for automatic integration with other systems)
- **"Alert format"**: Select the format of the sent file that defines the alert details.
- **"Emails"**: By selecting E-mail as the notification type, we can enter an email address to send reports to. After entering an email, it is necessary to press "Enter" on the keyboard to confirm its entry. Once pressed, the newly entered email will move to the box at the bottom, and the field will be cleared to allow for the entry of a new email, if necessary.

The screenshot shows the 'Alert configuration' section of the 'New Rule' form. The fields are as follows:

- Alert Type:** Quota
- Alert Schedule:** Daily
- Quota Type:** Memory
- Threshold (%):** 75
- Subsystems:** Industry Standard Provider
- Alert Send Type:** Email
- Alert Format:** CSV
- Emails:** (Text input field for email addresses)

At the bottom right of the configuration panel are 'Cancel' and 'Add' buttons.

Figura 163 – Configuration Page

7.0.3.2 Viewing, Modifying, and Deleting an Alert

On this page, we find the list and related information of the alerts present in the system. For each result, by clicking the "Three dots" button on the right, it will be possible to perform three operations:

- View the "alert" configuration
- Edit the alert settings.
- Delete the schedule to stop sending emails.

Figura 172 – Modify a schedule

7.0.4.2.3 REPORT USAGE

By clicking on a static report row, or by using the "Show report" button available for scheduled reports, it will be possible to view the detail page of the selected report. Within the Inventory report summary, there is a "Stats" section which includes the number of disks, interfaces, networks, and virtual machines belonging to the selected provider. Below the "Stats" section, there are the filters used by the user to generate the report. Below the filters, there is a summary table of resources belonging to the providers. On the right, there are two buttons: "PRINT" and "EXPORT". Clicking the "PRINT" button will display a print preview modal. To print the report, click the "Print" button at the bottom right; at this point, the printing of the report will start. Clicking the "EXPORT" button allows exporting the report in ".csv", ".json", or ".pdf" format. To return to the "Results" tab, click the "CLOSE" button at the bottom right, or click the left-pointing arrow at the top left, next to the report title.

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is underlined, indicating it's the active section. Below the navigation, a breadcrumb trail shows 'Inventory / Reports' and a specific report ID 'Report 6669a0d3aae316468b3c8b34'. The main content area is titled 'Report Inventory Summary' with a back arrow. It features a 'Stats' section with five boxes: 1 VMs, 1 Disks, 1 Networks, 0 Interfaces, and 0 K8Ss. Below this, a table lists inventory details by provider and subsystem. The table has columns for Type Provider, Subsystem Name, VMs, Disks, Networks, Interfaces, and K8Ss. Two entries are shown: one for Azure (MAE LAB) with 14 VMs, 16 Disks, 14 Networks, 0 Interfaces, and 0 K8Ss; and one for Google (CMPPROJECT-374610) with 1 VM, 1 Disk, 1 Network, 0 Interfaces, and 0 K8Ss. At the bottom right of the table, there are buttons for 'PRINT' and 'EXPORT', and pagination controls showing 'Items per page: 20' and '1 – 2 of 2'.

| Type Provider | Subsystem Name | VMs | Disks | Networks | Interfaces | K8Ss |
|---------------|-------------------|-----|-------|----------|------------|------|
| Azure | MAE LAB | 14 | 16 | 14 | 0 | 0 |
| Google | CMPPROJECT-374610 | 1 | 1 | 1 | 0 | 0 |

8 Security

The SCMP's security feature shows the vulnerabilities of inventory assets present on the SCMP.

To access the “Security” feature, click the bento button in the top left. After doing so, the menu bar will appear, where you need to click on “Security”.

Figura 174 – Access to Security

8.0.1 General Dashboard

At this point, the user is on the “Dashboard” tab page where the security data of resources for all configured providers are shown in an aggregated manner.

At the top, there is a filter bar that allows filtering results by subsystem, status, and/or policy name.

After that, the user notices the presence of the bar chart indicating the compliance status of resources assigned to policies, subdivided by subsystem.

By hovering the mouse over a section of the chart, we can see that the values displayed on the page are updated to show a preview of the detail.

It is possible to click on a section of the chart to automatically apply the “subsystem” and “status” filters to the page.

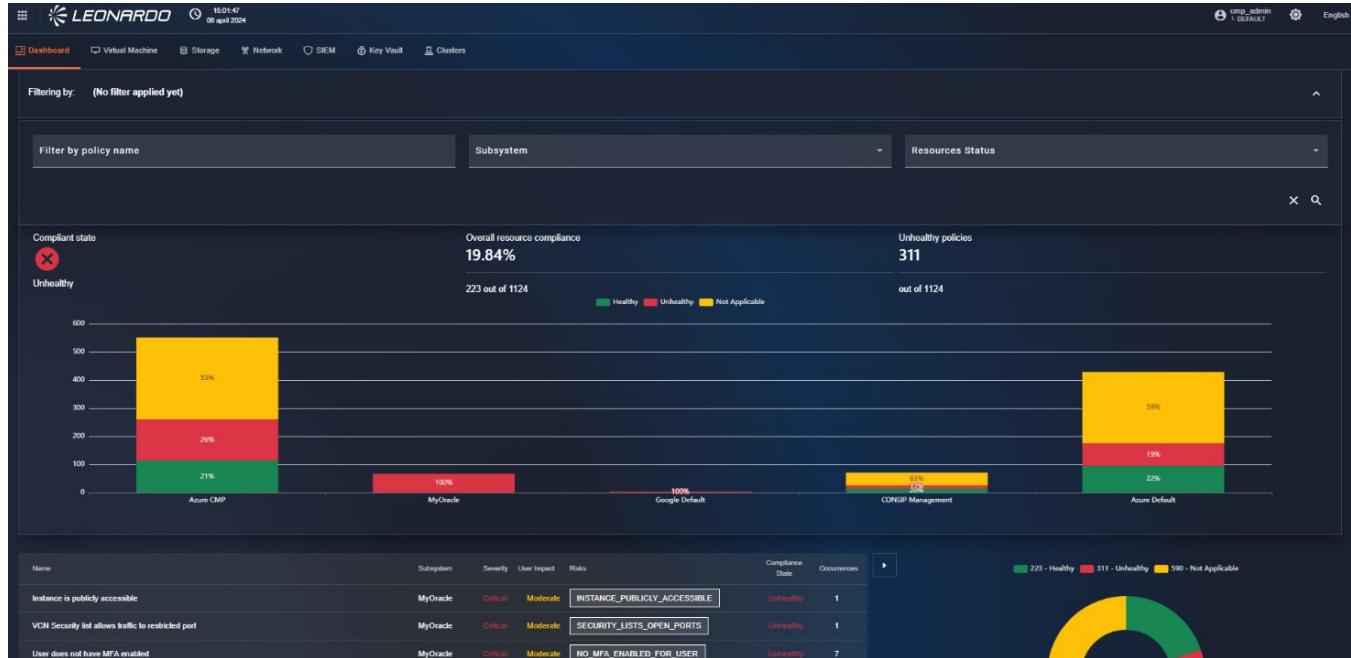

Figura 175 – Security Dashboard

Scrolling down the page, there is the policies table which will be automatically filtered based on the selected filters.

The policies table shows the following details:

| Name | Subsystem | Severity | User Impact | Risks | Compliance State | Occurrences |
|---|---------------|----------|-------------|--|------------------|-------------|
| Instance is publicly accessible | MyOracle | Critical | Moderate | INSTANCE_PUBLICLY_ACCESSIBLE | Unhealthy | 1 |
| VCN Security list allows traffic to restricted port | MyOracle | Critical | Moderate | SECURITY_LISTS_OPEN_PORTS | Unhealthy | 1 |
| User does not have MFA enabled | MyOracle | Critical | Moderate | NO_MFA_ENABLED_FOR_USER | Unhealthy | 7 |
| Firewall rules that allow connections from all IP addresses on TCP port 3389 or UDP port 3389 may expose RDP services to attackers | | | | | Unhealthy | 1 |
| To reduce the attack surface, avoid assigning public IP addresses to your VMs. Stopped instances may still be flagged with a Public IP binding, e.g. if the network interfaces are configured to assign an ephemeral public IP on start. Ensure the network configurations for stopped instances do not include external access | | | | | Unhealthy | 1 |
| Firewall rules that allow connections from all IP addresses on TCP port 22 or SCTP port 22 may expose SSH services to attackers | | | | | Unhealthy | 1 |
| Firewall rules that allow connections from all IP addresses on TCP port 22 or SCTP port 22 may expose SSH services to attackers | | | | | Unhealthy | 1 |
| To reduce the attack surface, avoid assigning public IP addresses to your VMs. Stopped instances may still be flagged with a Public IP binding, e.g. if the network interfaces are configured to assign an ephemeral public IP on start. | Firewall rules that allow connections from all IP addresses on TCP port 3389 or UDP port 3389 may expose RDP services to attackers | | | | | Unhealthy | 1 |
| All network ports should be restricted on network security groups associated to your virtual machine | Azure CMP | High | High | MaliciousInsider, DataSpillage, DataExfiltration | Unhealthy | 9 |
| Machines should be configured to periodically check for missing system updates | Azure Default | High | Low | AccountBrach, DataExfiltration, DataSpillage, MaliciousInsider | Healthy | 9 |

Figura 176 – Policies table

Clicking on a row in the table will open a detail window where you can find all information related to the selected policy, and the list of affected resources will also be available. It is possible to click on the name of a machine to view its details; in this case, the user will be redirected to the SCMP inventory resource in “view” mode.

| Name | Severity | Compliance Status |
|---|----------|-------------------|
| VCN Security Group | High | Unhealthy |
| User IP | High | Unhealthy |
| Firewall rule RDP service | High | Unhealthy |
| To reduce risk be flagged as public IP on Firewall rule SSH service | High | Unhealthy |
| Firewall rule SSH service | High | Unhealthy |
| To reduce risk be flagged as public IP on Firewall rule RDP service | High | Unhealthy |

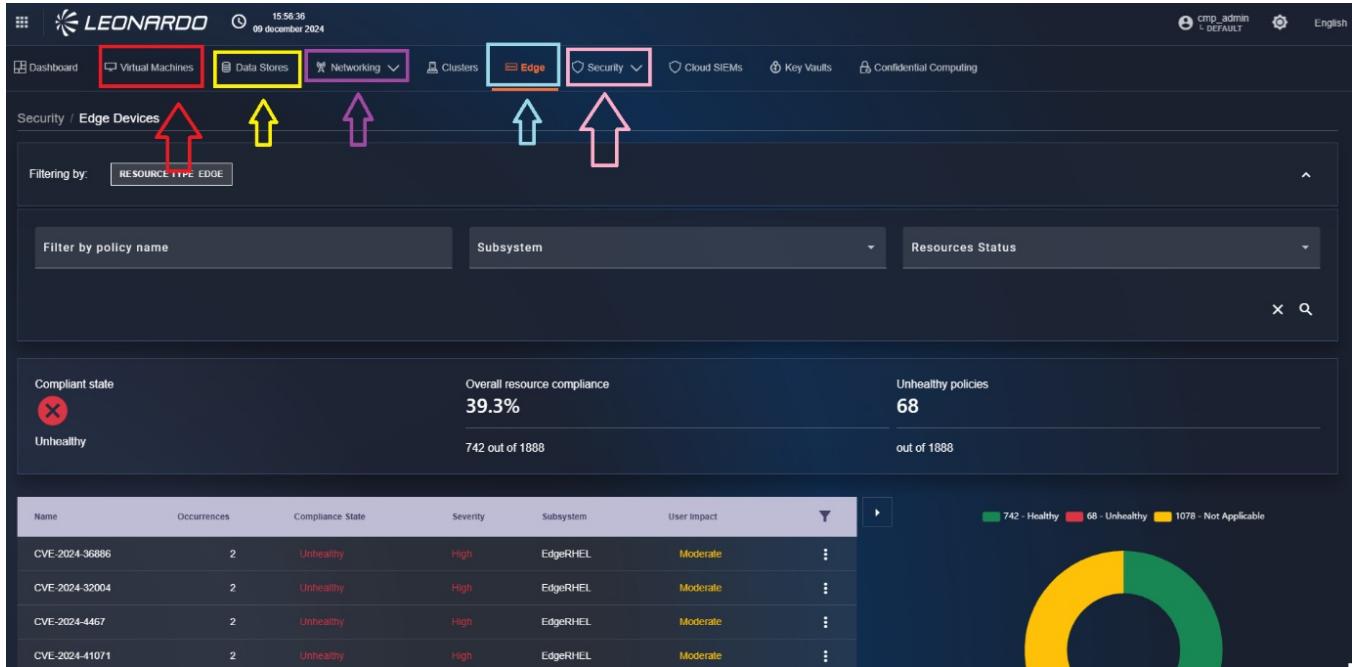

Figura 177 – Policy details

To exit the detail, you need to click outside the window, which will close automatically.

8.0.2 Dashboards specific to resource type

It is possible to further filter policies by resource type, using the tabs at the top of the page.

Once the resource type is selected, it is possible to navigate the pages following the methods described in the previous paragraph.

*Figura 178 – Virtual Machines
compliance Dashboard*

8.0.3 SIEM Dashboard

To view the SIEM dashboard, click on the tab that depicts a shield. At the top, there is a dropdown menu where you can select the subscription of interest, while next to it is a dropdown menu where you can select a time range.

Below, there is the “Summary” section which contains information, including for example “Alerts” which indicates the number of alerts. Also within the “Summary” section is the “Incidents by status” chart which indicates incidents by status.

Below the “Summary” section, there is the “Hourly Events Grouped By Type” section which contains a histogram chart indicating hourly events by type.

Figura 179 – SIEM Dashboard

Scrolling through the SIEM dashboard, there is the “Event types” chart which indicates all event types.

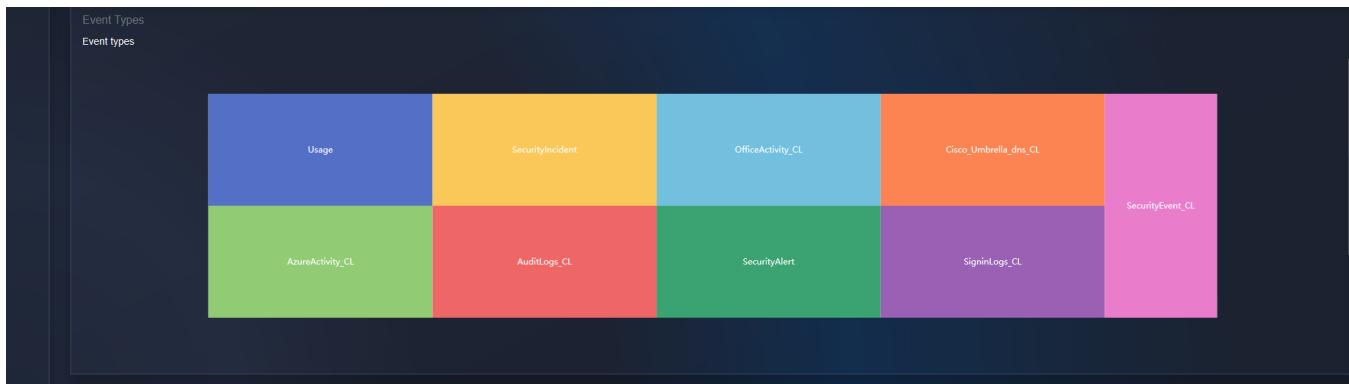

Figura 180 – “Event types” of the SIEM dashboard

Finally, at the bottom of the page, there are two tables: on the left, the “Alert rules” table which shows a set of alarm rules, while on the right, there is the “Incidents” table which shows incidents.

| Name | Severity | Kind |
|--|----------|-----------|
| Solorigate Network Beacon | High | Scheduled |
| Sign-ins from IPs that attempt sign-ins to disabled accounts | Medium | Scheduled |
| Malicious Inbox Rule - custom | Medium | Scheduled |
| Advanced Multistage Attack Detection | High | Fusion |
| Azure DevOps Service Connection Abuse | Medium | Scheduled |

| Name | Status | Alerts count |
|--|--------|--------------|
| Solorigate Network Beacon | New | 6 |
| Malicious Inbox Rule, affected user AdeleV@contoso.onmicrosoft.com | New | 6 |
| Sign-ins from IPs that attempt sign-ins to disabled accounts | New | 6 |

Figura 181 – “Alert rules” and “Incidents” tables

Clicking on a row in the table will open a detail window, where you can find all information related to the selected rule or incident.

The screenshot shows the Azure Sentinel interface. At the top, there's a navigation bar with tabs like Dashboard, Virtual Machine, Storage, Network, Key Vault, Clusters, and the active SIEM tab. Below the navigation is a search bar and a filtering section. The main area displays two tables: 'Alert rules' and 'Incidents'. The 'Alert rules' table lists several rules with columns for Name, Severity, and Kind. The 'Incidents' table lists incidents with columns for Name, Status, and Alerts count. In the center, a large modal window is open for the 'Advanced Multistage Attack Detection' rule. This modal contains detailed information such as the rule's description, detection logic (using Fusion), and specific alert details. It also shows a timeline of events and a list of affected users.

Figura 182 – “Incidents” details

8.0.4 Secret Manager Dashboard

To view the SIEM dashboard, click on the tab that depicts a key. At the top, there is a dropdown menu where you can select the subscription of interest.

Figura 183 – Key Vault Dashboard

At the bottom of the page, you can see navigation buttons for the table and a table.

Depending on the selected page, the table will display respectively:

- Secret
- Keys
- Certificates

| Name | Resource Group | Creation Date | Update Date | Enabled | Retention Days |
|-----------------|----------------|---------------------|---------------------|-------------------------------------|----------------|
| testcertificate | sentineltest | 12/12/2022 17:07:12 | 12/12/2022 17:07:12 | <input checked="" type="checkbox"/> | 90 |
| testsecret | sentineltest | 12/12/2022 17:06:06 | 12/12/2022 17:06:06 | <input checked="" type="checkbox"/> | 90 |

Figura 184 – Viewable resources

Clicking on a row in the table allows you to view the detail of the selected resource.

Figura 185 – Key details

8.0.5 Clusters Dashboard

At this point, the user is on the “Dashboard” tab page where all alerts generated by the configured “Cluster” type subsystems in SCMP are shown in an aggregated manner.

At the top, there is a filter bar that allows filtering results by namespace, subscription, and/or policy name.

After that, the user notices the presence of the bar chart indicating the total number of “alerts” received, subdivided by subsystem.

By hovering the mouse over a section of the chart, we can see that the values displayed on the page are updated to show a preview of the detail.

It is possible to click on a section of the chart to automatically apply the “subsystem” filter.

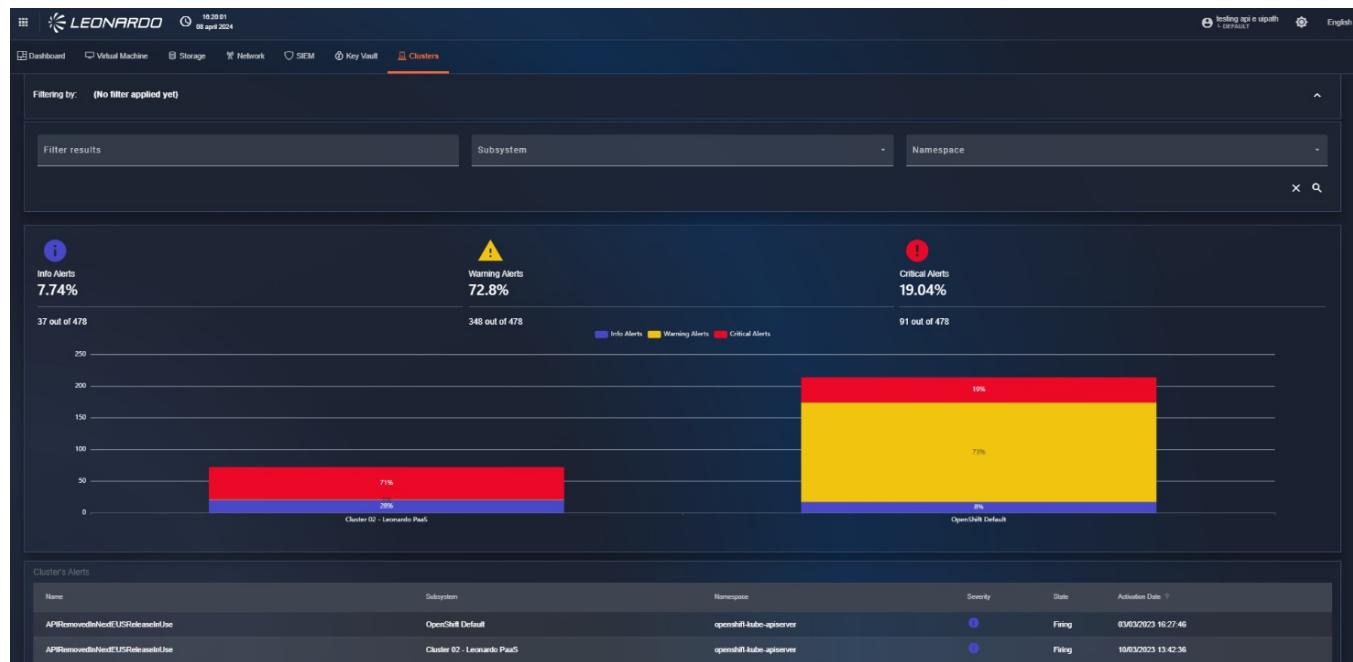

Figura 186 – “Cluster alerts” Dashboard

Scrolling down the page, there is the “alerts” table which will be automatically filtered based on the selected filters.

Figura 187 – Alerts table

Clicking on a row in the table will open a detail window, where you can find all information related to the selected “alert”.

The screenshot shows a detailed alert view for a specific cluster. At the top, it displays "Policy Details: All network ports should be restricted on network security groups associated to your virtual machine". Below this, there are sections for "Risks" (MaliciousInsider, DataSpillage, DataExfiltration) and "Cloud Provider's Advice". The main table lists various resources with their names, instance types, and status (Severity: High, Compliance State: Unhealthy). A legend at the bottom indicates that High severity is red, Low is green, and Medium is orange.

| Name | Instance is | Show resources which status is: | Severity | Compliance State |
|--|---------------|---------------------------------|----------|------------------|
| /subscriptions/09837d5-2d40-4623-9b82-5a5104d983d2/resourcegroups/cmp-rsg/providers/microsoft.compute/virtualmachines/vm-ubnt-manageiq | Resource | Healthy | High | Unhealthy |

Figura 188 – Alert details on clusters

To exit the detail, you need to click outside the window, which will close automatically.

8.0.6 Compliance Dashboard

To view the compliance dashboard, click on the tab that depicts a document in the security module.

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

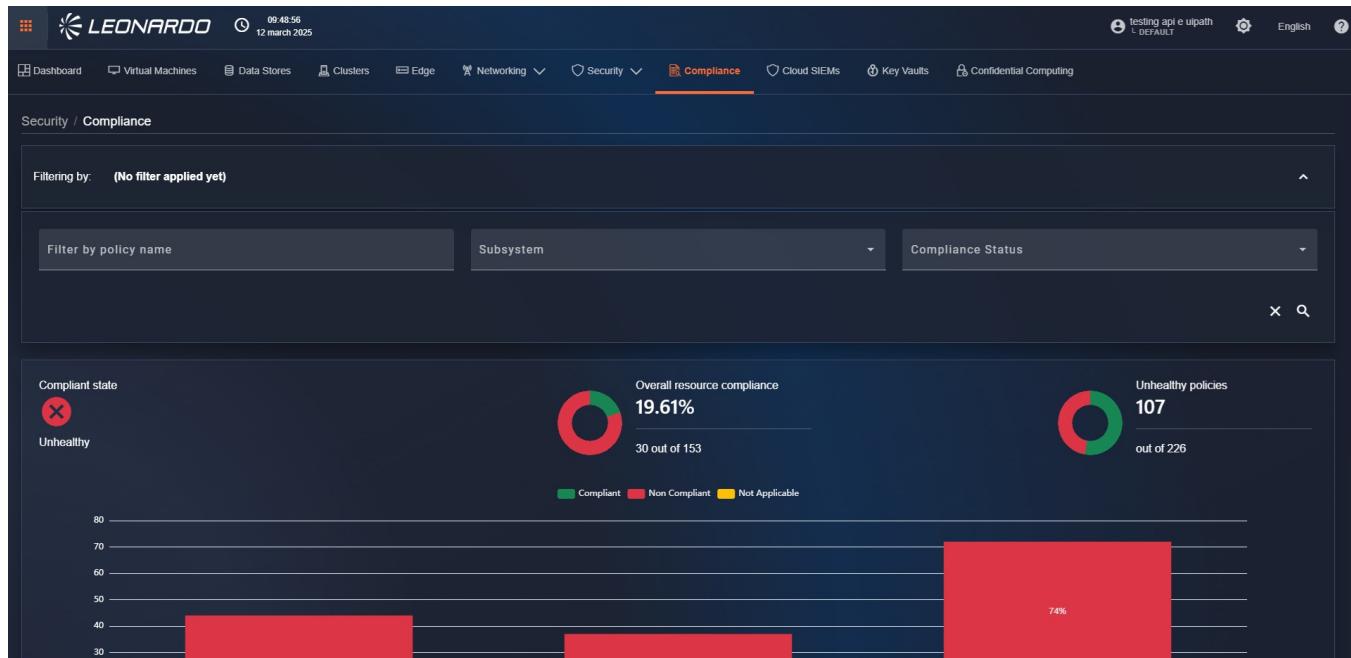

Figura 189 – Compliance dashboard

At this point, the user is on the "Compliance" tab page, composed of 4 sections. The first section contains filters that allow searching by policy name, subsystem, and/or compliance status. The second section, always active, contains pie charts that indicate the general status of the filtered resources.

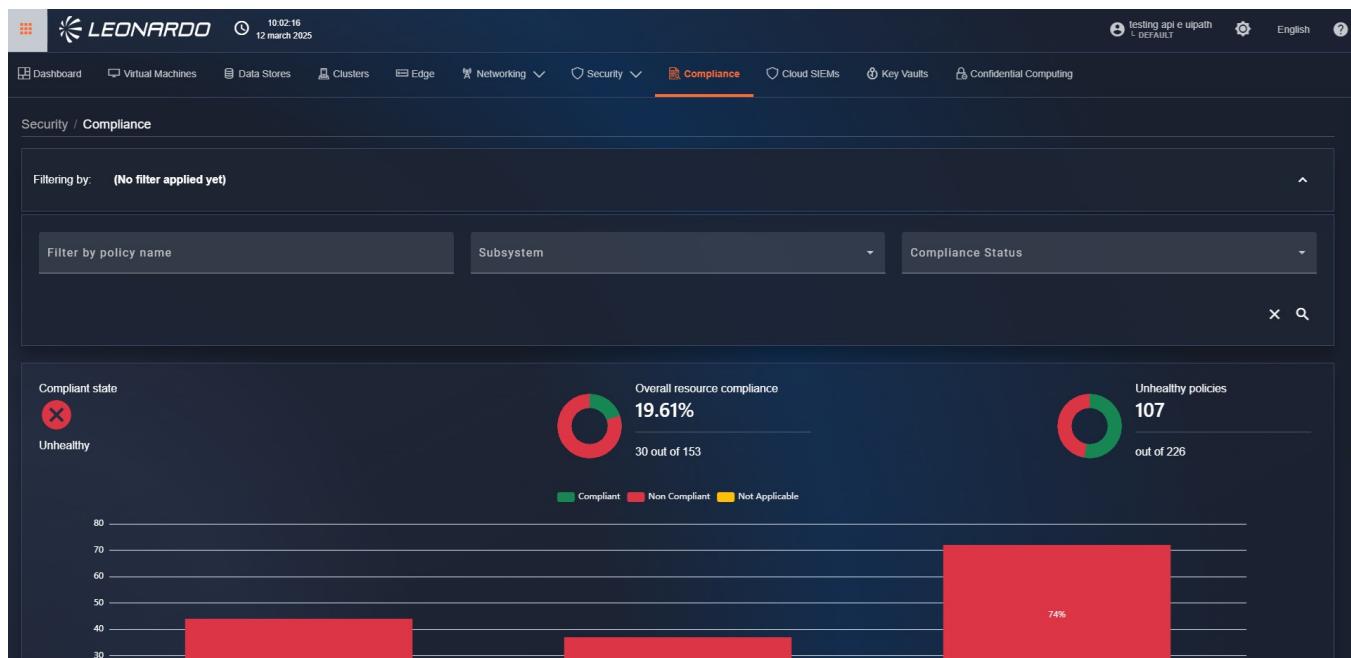

Figura 190 – “Filters” and “pie charts” sections

The third section, active only if multiple different subsystems are present in the results, shows a bar chart, subdivided by provider, of the compliance status of resources. The last section contains a table with general information on policy groups.

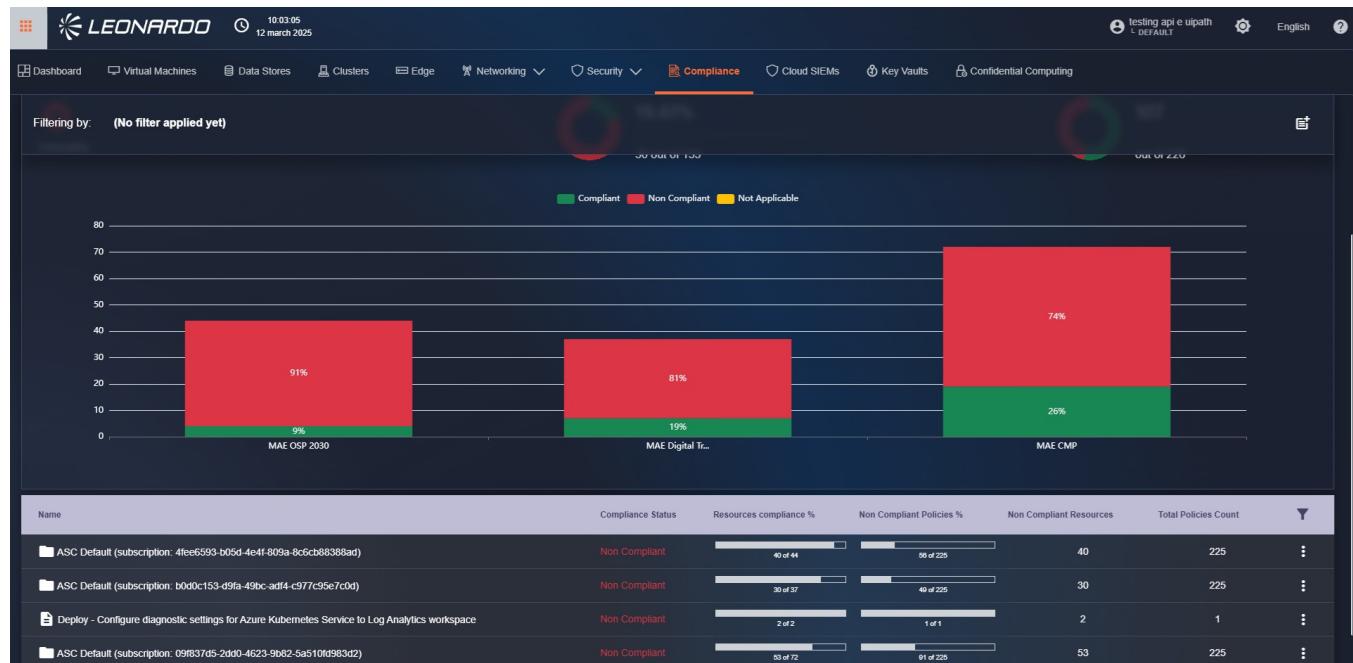

Figura 191 – “Bar charts” and “table” sections

Clicking on a row in the table opens a modal where it will be possible to view the list of all policies configured in the group, with the relative resource count. Still within the modal, we can click on one of the displayed policies; doing so will show at the bottom the list of all machines assigned to the policy and their respective status. Next to each resource, a “link” button is available; once clicked, the user will be redirected to the inventory page of the selected resource.

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows a dashboard titled "Policy Set's Details: ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d)". The main table displays five policy items with their names, resource counts, assignment names, subsystems, and compliance statuses:

| Name | Total Resources Count | Policy Assignment Name | Subsystem | Compliance Status |
|--|-----------------------|--|----------------------------|-------------------|
| A Microsoft Entra administrator should be provisioned for MySQL servers | 0 | ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d) | MAE Digital Transformation | Compliant |
| A Microsoft Entra administrator should be provisioned for PostgreSQL servers | 0 | ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d) | MAE Digital Transformation | Compliant |
| A maximum of 3 owners should be designated for your subscription | 1 | ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d) | MAE Digital Transformation | Non Compliant |
| A vulnerability assessment solution should be enabled on your virtual machines | 6 | ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d) | MAE Digital Transformation | Non Compliant |
| API Management APIs should use only encrypted protocols | 0 | ASC Default (subscription: b0d0c153-d9fa-49bc-adf4-c977c95e7c0d) | MAE Digital Transformation | Compliant |

Below the table, a message states: "Resources related to the policy: A vulnerability assessment solution should be enabled on your virtual machines". A secondary table lists resources associated with this policy, all marked as "Non Compliant":

| Resource Name | Compliance Status | Resource Link |
|--|-------------------|---------------|
| /subscriptions/b0d0c153-d9fa-49bc-adf4-c977c95e7c0d/resourcegroups/vm-pqp-class_group/providers/microsoft.compute/virtualmachines/vm-pqp-class | Non Compliant | 🔗 |

Figura 192 – Policy details

9 Catalog

The Catalog section has three important features:

- Displaying the list of installable assets retrieved from providers, along with their associated prices and regions.
- Enabling the tenant administrator to define items that can be subsequently used for provisioning.
- Enabling the tenant administrator to define items that can be subsequently used within What If module simulations.

The retrieved prices, in addition to being visible within the asset's details, are used for What If scenarios and cost calculation.

To access the Catalog functionality, click on the bento button in the upper left corner.

Then, click on "Catalog".

Figura 193 – Accesso a Catalog

At this point, the user is on the "Resources" tab page.

We can divide the functionality into 3 sections to specify its behavior:

- SCMP catalog items (yellow box in the image).

- Provider catalog items (green box in the image).
- SCMP catalog services and blueprints (red box in the image).

Below, we will analyze each group of functionalities separately.

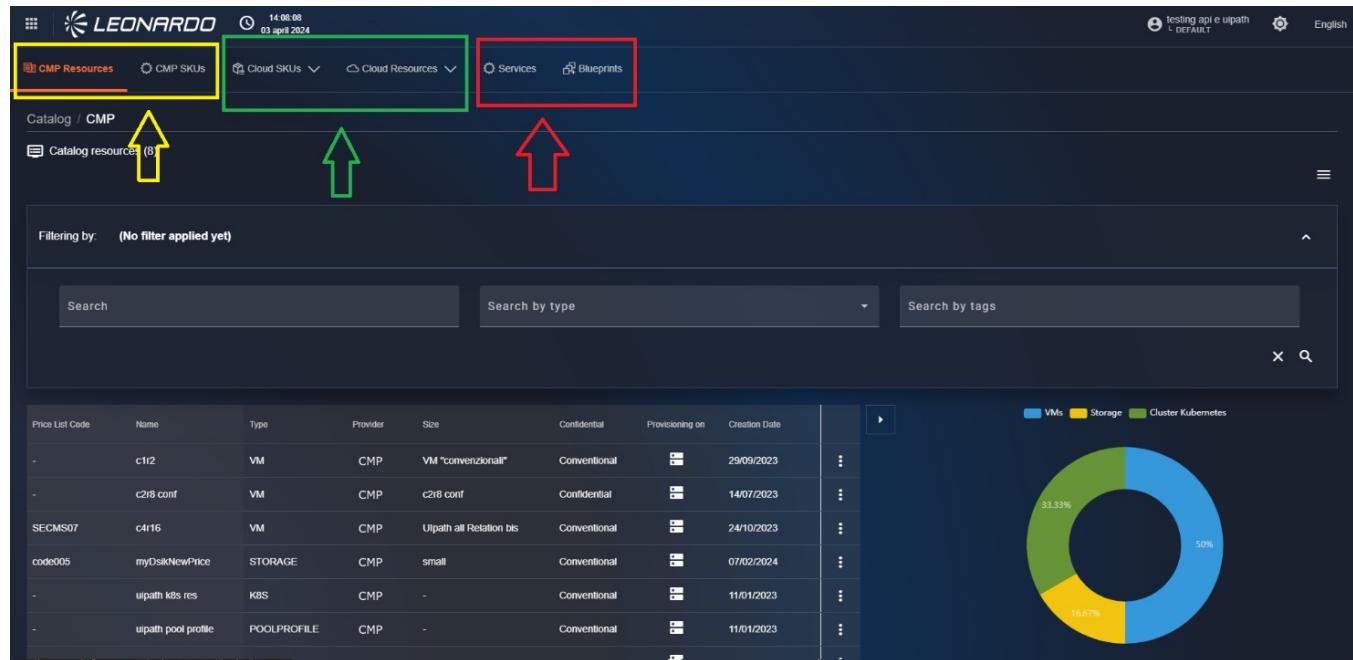

Figura 194 – Catalogo della SCMP

9.0.1 SCMP Catalog Item Management

On the page, there is a series of filters that, once selected and by clicking on the magnifying glass button, will be used to filter the list of results.

| Price List Code | Name | Type | Provider | Size | Confidential | Provisioning on | Creation Date |
|-----------------|-----------|------|----------|-------------------------|--------------|-----------------|---------------|
| - | c1r2 | VM | CMP | VM "convenzionali" | Conidential | | 29/09/2023 |
| - | c2r6 conf | VM | CMP | c2r6 conf | Conidential | | 14/07/2023 |
| SECMS07 | c4r16 | VM | CMP | Ulpath all Relation bts | Conidential | | 24/10/2023 |

Figura 195 – Catalogo SCMP filtrato

■ Association between SCMP catalog resource/SKU and Provider catalog resource/SKU

To allow the system to correctly calculate costs, it is necessary that the SCMP catalog resource or SKU contains a reference to the actual ID retrieved from the provider (as explained in this section) in order to correctly overwrite the cost of the resource / SKU.

Next to the magnifying glass button, there is an "X" button to reset the filters and the resource table.

Below the search filter, there is a search filter for tags.

Click on it and select a tag; at this point, the table returns the resources associated with the tag selected by the user.

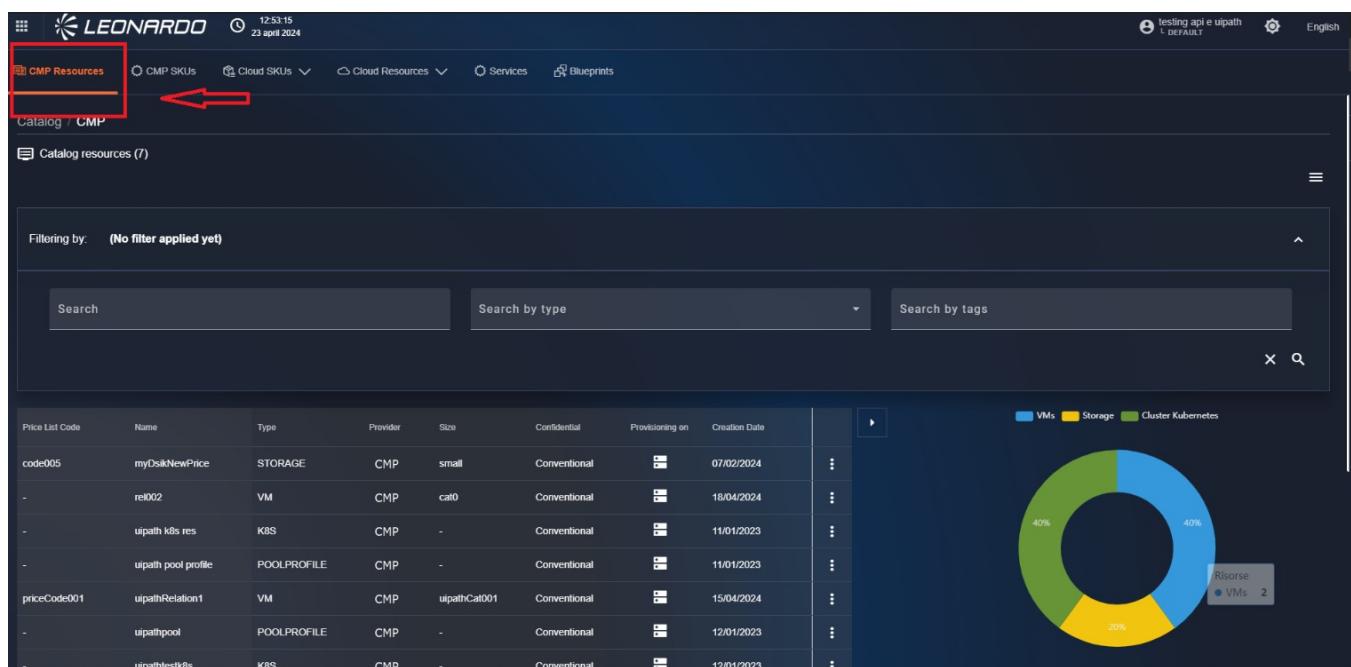

9.0.1.1 Resources and relationships between resources

Within the SCMP, it is possible to configure a "Relationship" type resource. This relationship allows mapping machines from various providers to modify their costs and enable their use in other functionalities (e.g., for cost calculation).

Automatic Relationships

If a price list resource with the provider's UUID but no relationship is present in the SCMP catalog, the relationship will be created automatically, and costs will be updated accordingly. After a few minutes, the relationship will also be visible within the catalog.

To access the relationships page, click the "SCMP Resources" tab at the top of the Catalog functionality.

| Price List Code | Name | Type | Provider | Size | Confidential | Provisioning on | Creation Date | |
|-----------------|---------------------|-------------|----------|--------------|--------------|-----------------|---------------|---|
| code005 | myDiskNewPrice | STORAGE | CMP | small | Conventional | 07/02/2024 | | ⋮ |
| - | rel002 | VM | CMP | cat0 | Conventional | 18/04/2024 | | ⋮ |
| - | uipath k8s res | K8S | CMP | - | Conventional | 11/01/2023 | | ⋮ |
| - | uipath pool profile | POOLPROFILE | CMP | - | Conventional | 11/01/2023 | | ⋮ |
| priceCode001 | uipathRelation1 | VM | CMP | uipathCat001 | Conventional | 15/04/2024 | | ⋮ |
| - | uipathpool | POOLPROFILE | CMP | - | Conventional | 12/01/2023 | | ⋮ |
| - | uipathtestk8s | K8S | CMP | - | Conventional | 12/01/2023 | | ⋮ |

Figura 196 – Accesso a "SCMP resources"

At the top, there is a filter section that allows searching by:

- "Search": allows entering free text for searching.
- "Search By tags": allows searching using tags associated with resources.
- "Search by Service name": allows searching by service name.

9.0.1.1.1 RESOURCE EXPORT

To export the list of Catalog resources present in the list, on the page, in the upper right corner, click on the hamburger menu, and then click on "Export".

The operator will have the option to export the list of results in .csv and/or .json format.

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows a dark-themed web interface for creating a new resource. At the top, there's a header bar with the Leonardo logo, a timestamp (16.06.46 03 aprile 2024), and some navigation links like 'Testing api e upath', 'DEFAULT', and 'English'. Below the header, a breadcrumb navigation shows 'Catalog / CMP / Create'. The main area is titled 'New resource Disco del Catalogo'. It contains four tabs: 'Properties' (selected), 'Tags & Notes', 'Relations', and 'Costs'. At the bottom right of the dialog are 'Save' and 'Close' buttons.

Figura 201 – Esempio di form per la creazione di una relazione

The individual parameters to be entered in the "Properties" section are specified in the table:

Mandatory parameters are indicated with *

| Name | Type | Description | Example |
|-----------------|---------|--|------------------|
| category | string | Enter the resource's category | CAT0004BT |
| Price list code | string | Enter the price list identifier code from which associations are derived | PRC005DE |
| confidential | boolean | If enabled, indicates that the resource is confidential | false |
| description | string | Enter a free description of the resource | Low end machine |
| Name* | string | Enter the resource name | 8Core16GB- small |
| RAM(GIB)* | integer | Enter here the quantity in GiB used by the machines included in the relationship | 16 |
| VCPU* | integer | Enter here the number of vCPUs used by the machines included in the relationship | 8 |

On the resource creation page, fill in all fields in the "Properties" section. After doing this, select one or more tags for the "Add SCMP tag..." field and fill in notes in the "Tags & Note" section.

Figura 202 – Sezione tag e note

In the "Relations" section, open the left section. Subsequently, it is possible to use the "search" filters with free text or select a "System Type" from those available to filter the resource table.

Once the resource to be associated is identified, drag and drop it from the right side of the page to the left side.

It is possible to add only one resource per provider type. If the user tries to insert another resource from the same provider, a pop-up will appear inviting the user to add only one resource per provider.

The screenshot shows the 'Relations' section of the 'New resource Virtual Machine del Catalogo' creation page. On the left, a sidebar lists providers: VM CatalogoAzureStack, VM CatalogoVMWare, VM CatalogoAzureStackHybridCloud, VM CatalogoGoogle, VM CatalogoAzureStackHCI, VM CatalogoAmazonWebServices, VM CatalogoAzure, VM CatalogoOracle, and VM CatalogoVCloudDirector. On the right, a search interface allows selecting a provider and its specific instance (e.g., AzureStack, AzureStackHCI).

Figura 203 – Selezione del provider per associare le risorse

We can make a "single" association by entering only one machine in this section. In this way, the system allows us to manually select a customized price to associate with the resource in the "Cost" section below. To do this, select the billing interval (hourly, daily, weekly, monthly) and enter the cost relative to the selected period on the right.

The screenshot shows the 'Cost' section of the 'New resource Virtual Machine del Catalogo' creation page. A dropdown menu allows selecting a billing interval: Hourly, Daily, Weekly, or Monthly. A cost value of €100 is entered for the Daily billing interval. Buttons for 'Save' and 'Close' are at the bottom.

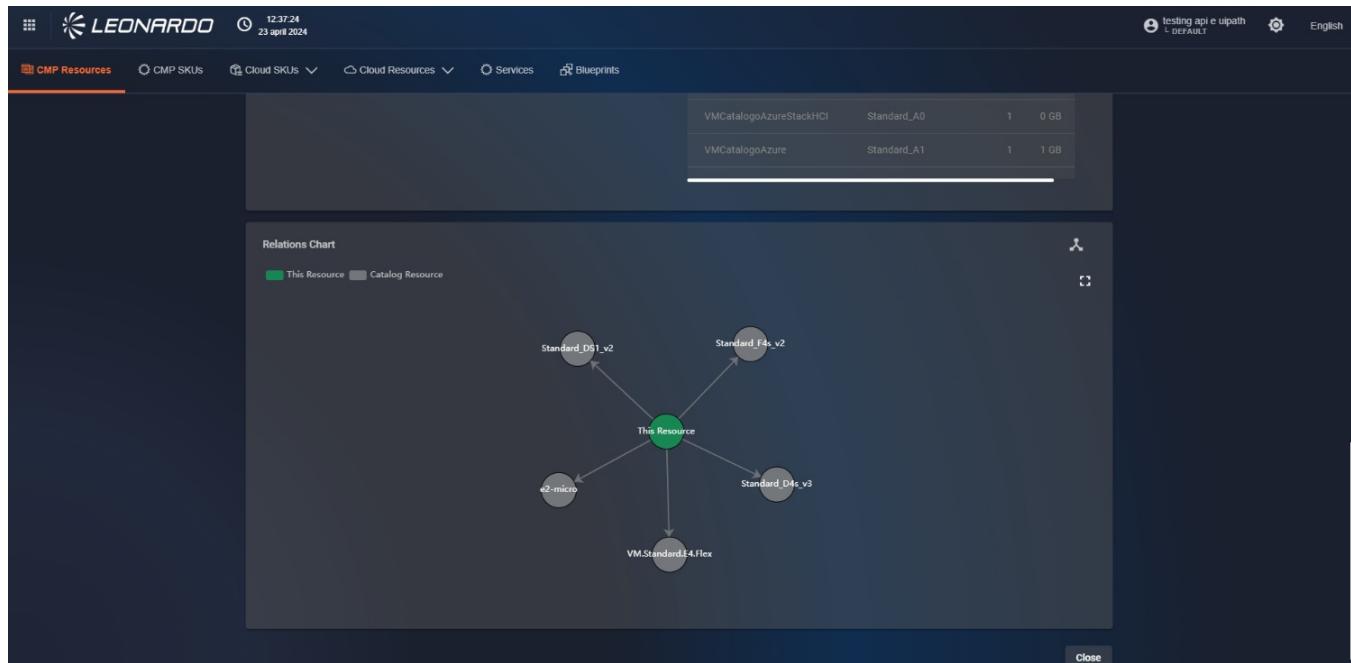

Figura 204 – Sezione costi delle relazioni

By selecting more than one machine per provider, the cost section is automatically hidden; the applied costs will be defined by the percentages configured in the subsystems.

| Type | Name | CPU | RAM |
|----------------------|--------------------|-----|---------|
| VMCatalogoOracle | BM.DenseIO.E4.128 | 128 | 2048 Gi |
| VMCatalogoOracle | BM.DenseIO2.52 | 52 | 768 Gi |
| VMCatalogoOracle | BM.Optimized3.36 | 36 | 512 Gi |

Figura 217 – Conferma eliminazione della risorsa

9.0.1.2 Resources and relationships between SKUs

Within the SCMP, it is possible to configure an "SCMP SKU" type resource. This relationship allows mapping SKUs received from providers to define their costs and the unit of measure displayed in the system.

To access the SKUs page, click the "SCMP SKU" tab at the top of the Catalog functionality.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with tabs for 'CMP Resources', 'Cloud SKUs', 'Cloud Resources', 'Services', and 'Blueprints'. The 'CMP Resources' tab is active, and its sub-tab 'CMP SKUs' is highlighted with a red box and a red arrow pointing to it. Below the navigation, the page title is 'Catalog / CMP SKUs'. Underneath, there's a section for filtering with fields for 'Search', 'Search by tags', and 'Search by Service Name'. A message 'No SKUs found' is displayed. At the bottom right, there are pagination controls for 'Items per page' (set to 20), '0 of 0', and navigation arrows.

Figura 218 – Accesso a "SCMP SKU"

At the top, there is a filter section that allows searching by:

- "Search": allows entering free text for searching.
- "Search By tags": allows searching using tags associated with resources.
- "Search by Service name": allows searching by service name.

9.0.1.2.1 EXPORT OF CATALOG RESOURCES

To export the list of Catalog resources present in the list, always on the "SCMP" tab page, in the upper right corner, click on the hamburger menu, and then click on "Export".

The operator will have the option to export the list of results in .csv and/or .json format.

Figura 219 – Scaricare la lista di risultati

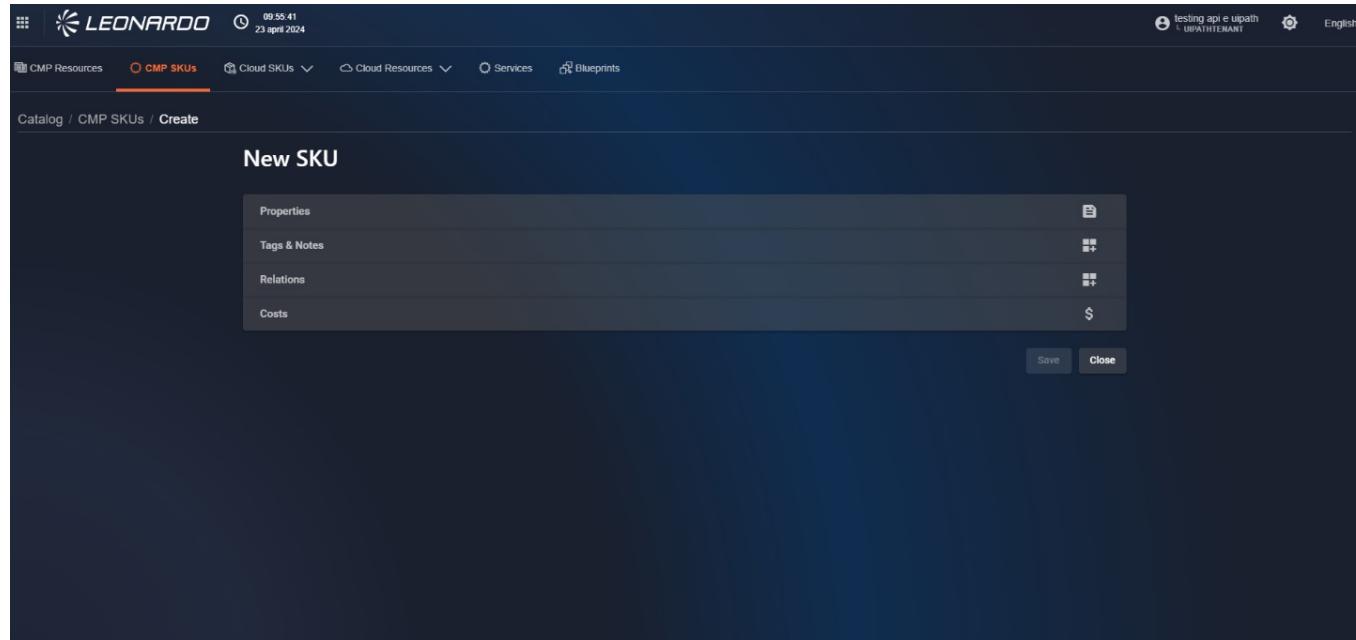

9.0.1.2.2 CREATING A CATALOG SKU RELATIONSHIP

To create a resource in the Catalog, always on the "SCMP" tab page, in the upper right corner, click on the hamburger menu, and then click on "Add Catalog Resource".

*Figura 220 – Opzione per aggiungere
una risorsa “SKU”*

At this point, the user is on the "SKU" resource creation page. Click on the accordions on the page to view their details.

*Figura 221 – IPagina di creazione
“SKU”*

In the "Properties" section, fill in all fields defined in the table.

Mandatory parameters are indicated with *

| Name | Type | Description | Example |
|-----------------|--------|--|---|
| Price list code | string | Enter the price list identifier code from which associations are derived | PRI002FG |
| description | string | Enter a free description of the SKU | This sku is the basic v m on this p rovider |
| name * | string | Enter the SKU name | Simple vm sku |

| Name | Type | Description | Example |
|------------------------------|--------|--|------------------------|
| Service name | string | Enter the name of the service related to the SKU | enter the service name |
| unit | string | Enter text that will be used as the "unit of measure" displayed across all functionalities | MB/hour |
| Unit conversion Expression * | string | Enter the conversion formula between the value received from the provider and the value that will be used in the SCMP (conversion between the provider's unit of measure and the unit of measure indicated in the SKU relationship) "\$var" indicates the value received from the provider | \$var * 24 / 100 |

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there is a header with the Leonardo logo, a timestamp (09:56:19, 23 April 2024), and some user information. Below the header, a navigation bar includes links for 'CMP Resources', 'CMP SKUs' (which is highlighted in orange), 'Cloud SKUs', 'Cloud Resources', 'Services', and 'Blueprints'. The main content area is titled 'Catalog / CMP SKUs / Create' and features a sub-titile 'New SKU'. A modal window is open, titled 'Properties', containing several input fields: 'Price List Code', 'Description', 'Name *', 'Service Name', 'Unit', and 'Unit Conversion Expression *'. To the right of the conversion expression field is a button labeled 'TEST EXPRESSION'.

*Figura 222 – Compilazione dei campi,
selezione Properties*

After entering the conversion formula, it is necessary to click the "Test expression" button to verify its correctness.

If it has been entered correctly, the button will turn "Green" with "TEST OK" written on it; otherwise, it will turn "Red" with "KO". In this case, the possibility of saving the relationship is inhibited.

The screenshot shows a dark-themed web interface for creating a new SKU. At the top, there's a navigation bar with links for 'CMP Resources', 'CMP SKUs' (which is highlighted in orange), 'Cloud SKUs', 'Cloud Resources', 'Services', and 'Blueprints'. On the far right, there are user profile and language selection options ('testing api e upath L'UPATHENANT' and 'English'). Below the navigation, the path 'Catalog / CMP SKUs / Create' is shown. The main area is titled 'New SKU' and contains a 'Properties' card with several input fields: 'Price List Code', 'Description', 'Name *' (marked with a red asterisk), 'Service Name', 'Unit', and 'Unit Conversion Expression *' containing '\$var * 24'. At the bottom right of the card is a green button labeled 'TEST OK'. At the very bottom of the card, there's a 'Tags & Notes' section.

Figura 223 – Conferma della formula di conversione

Subsequently, select one or more tags for the "Add SCMP tag..." field and fill in notes in the "Tags & Note" section.

In the "Relation" section, it is possible to select one or more SKUs from the various provider catalogs to relate them and unify their costs. To do this, click on the "Composition" section on the left; a dark section will open where, using drag and drop, we can move the available SKUs to the right section.

In the right section, filters can be used to display only relevant results. The available filters are: the origin provider, the service name, and a free text field (in yellow in the image).

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows the 'Relations' section of the Secure Cloud Management Platform. At the top, there is a search bar with 'Provider' set to 'Google' and 'Service Name' set to 'SQL Server 2014 Express on H...'. Below the search bar, a list of resources is displayed, with the first item highlighted by a red box. This item is 'Licensing Fee for Standard Plan on VM with 12 vCPU or more'. A yellow arrow points from the left towards the search bar.

*Figura 224 – Drag and drop Relazioni
SKU*

Once the resources are related, an illustrative diagram will automatically be created in the 'Relations Chart' section.

The screenshot shows the 'Relations Chart' section of the Secure Cloud Management Platform. It features a circular diagram with three nodes: a green circle labeled 'This Resource' at the top, and two pink circles labeled 'SKU' at the bottom. A curved line connects the 'This Resource' node to each of the 'SKU' nodes. The legend at the top indicates that green represents 'This Resource' and pink represents 'SKU'. There are also 'Save' and 'Close' buttons at the bottom right.

Figura 225 – Creazione automatica del Relation Chart

Finally, click the save button to confirm the creation of the SKU relationship. Upon completion, you will return to the page containing the list of SKU relationships, where you can find the new relationship in the list.

9.0.1.2.3 USING THE CATALOG TABLE

9.0.1.2.3.1 Catalog Resource Summary View

To view the data of an SKU resource, in the list of resources, click on the record of interest for a resource. A checkbox will appear showing brief information about the identified resource: System, Name, Size, Update Date, name, and service as shown in the following image.

| Name | Service Name | Creation Date |
|--------------------|---|---------------|
| 1 vCore - Free | SQL Database General Purpose - Serverless - Compute Gen5 - 1 vCore - Free - EU West | 01/02/2024 |
| 100 RU/s | Azure Cosmos DB - 100 RU/s - US West | 21/04/2024 |
| 100 RU/s | Azure Cosmos DB - 100 RU/s | 21/04/2024 |

09.00

Secure Cloud Management Platform

The screenshot shows a detailed view of a catalog item in the Leonardo Secure Cloud Management Platform. At the top, there's a navigation bar with various cloud provider icons (AWS, Azure, Google, OpenShift, VMWare, etc.) and a search bar. Below the navigation is a breadcrumb trail: Catalog / CMP / View 64711c872e9a483bb6722cd9. The main content area has a title "Show Virtual Machine del Catalogo" and a sub-section "Virtual Machine del Catalogo (v1.1)". This section contains a table with details like System (CMP), Name (vm-small-all-Azure), RAM (8GB), Size (Standard_0Msms.Ds_v2_Flex_v2), and Update Date (06/06/2023). To the right of the table is a "Details" panel showing Name (vm-small-all-Azure), RAM (8GB), and N° vGPUs (2). Below these are tabs for Properties, Tags & Notes, Relations, and Costs. A large red box highlights the "Relations" tab, which displays a "Relations Chart". The chart shows four nodes connected by lines: "Virtual Machine del Catalogo Azure Stack HC3 Standard_U01_v2" (green circle, labeled "This Resource"), "Virtual Machine del Catalogo Azure Stack Hybrid Cloud catalogo hybridcloud" (grey circle), "Virtual Machine del Catalogo Azure standard_B1ms" (grey circle), and "Virtual Machine del Catalogo Azure standard_F1s_v2" (grey circle). The "Close" button is located at the bottom right of the Relations Chart window.

*Figura 232 – Sezione Relations Chart
delle risorse*

In the bottom right, click the "Close" button. The user will be redirected to the page containing the list of resources.

9.0.1.2.3.3 Editing Catalog Relationships

To modify an SCMP resource, on the "Resources" page of Catalog, in the list of resources, click on the kebab menu for a resource and then click on "Edit".

The screenshot shows the Leonardo Secure Cloud Management Platform's Catalog resources page. The top navigation bar includes links for CMP, AmazonWebServices, Azure, AzureStack, Google, OpenShift, VMWare, Blueprints, Services, Custom Services, AI Services, and PaaS. The left sidebar shows 'Catalog' and 'CMP'. The main area displays a table of catalog resources with columns for Name, Type, Provider, Size, Confidential, Provisioning on, and Creation Date. A context menu is open over the 'MyApplication' row, with the 'Edit' option highlighted. To the right of the table, there are two donut charts: one for VMs (blue) and Cluster Kubernetes (green), and another for Conventional (red).

| Name | Type | Provider | Size | Confidential | Provisioning on | Creation Date | Actions |
|-----------------------|-----------|----------|------|--------------|-----------------|---------------|---------|
| Audio Analytics | AIMODEL | CMP | - | Conventional | | 03/03/2023 | |

9.0.1.3 Scheduled Import of Catalog Items

Manually entering catalog resources is a very long and costly operation. To simplify this, the user is given the possibility to insert an "Excel" file containing data that will then be automatically imported on the day indicated as "Start validity".

9.0.1.3.1 NEW IMPORT

To insert a new price list, it is necessary to click the "hamburger menu" available in the upper right corner of the catalog resources page and select "Import Catalogue".

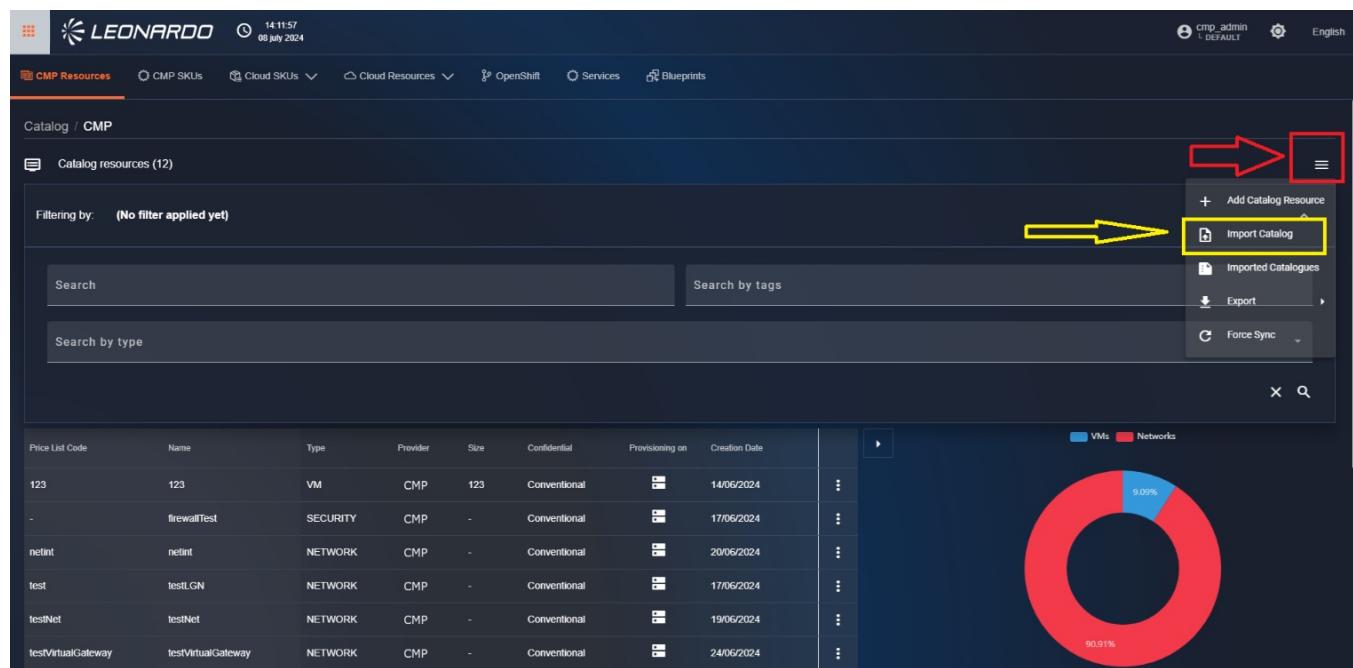

Figura 236 – Accesso all "Importazione pianificata del catalogo"

After clicking the button, a modal will open, containing two buttons:

- "Resources": clicking this button indicates to the system that the inserted price list will contain resources.
- "SKUs": clicking this button indicates to the system that the inserted price list will contain SKU items.

Once the resource type to be created is selected, the page updates to show all mandatory parameters.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a header with the Leonardo logo, the date '14 18:01 08 July 2024', and user information 'cmp_admin - DEFAULT English'. Below the header, a navigation bar includes 'CMP Resources', 'GMP SKUs', 'Cloud SKUs', 'Cloud Resources', 'OpenShift', 'Services', and 'Blueprints'. The main area is titled 'Catalog CMP' and shows 'Catalog resources (12)'. A search bar at the top left says 'Filtering by: (No filter applied yet)'. In the center, a modal window titled 'Import Catalog' asks 'What do you want to import?'. To the right, there's a table with columns: Price List Code, Name, Type, Provider, Size, Confidential, Provisioning on, and Creation Date. The table contains several entries. At the bottom right, there's a donut chart showing resource distribution: 9.09% for VMs and 90.91% for Networks.

| Price List Code | Name | Type | Provider | Size | Confidential | Provisioning on | Creation Date |
|--------------------|--------------------|----------|----------|------|--------------|------------------------------------|---------------|
| 123 | 123 | VM | CMP | 123 | Conventional | <input type="button" value="..."/> | 14/06/2024 |
| - | firewallTest | SECURITY | CMP | - | Conventional | <input type="button" value="..."/> | 17/06/2024 |
| netint | netint | NETWORK | CMP | - | Conventional | <input type="button" value="..."/> | 20/06/2024 |
| test | testLGN | NETWORK | CMP | - | Conventional | <input type="button" value="..."/> | 17/06/2024 |
| testNet | testNet | NETWORK | CMP | - | Conventional | <input type="button" value="..."/> | 19/06/2024 |
| testVirtualGateway | testVirtualGateway | NETWORK | CMP | - | Conventional | <input type="button" value="..."/> | 24/06/2024 |

Figura 237 – Scelta della tipologia di catalogo

Two parameters are present in the modal:

- Provider: Select the provider related to the price list that will be inserted.
- Valid From: It is possible to indicate a start validity date for the price list. On the day indicated in this variable, the system will automatically update the catalog resources to conform to the new price list.

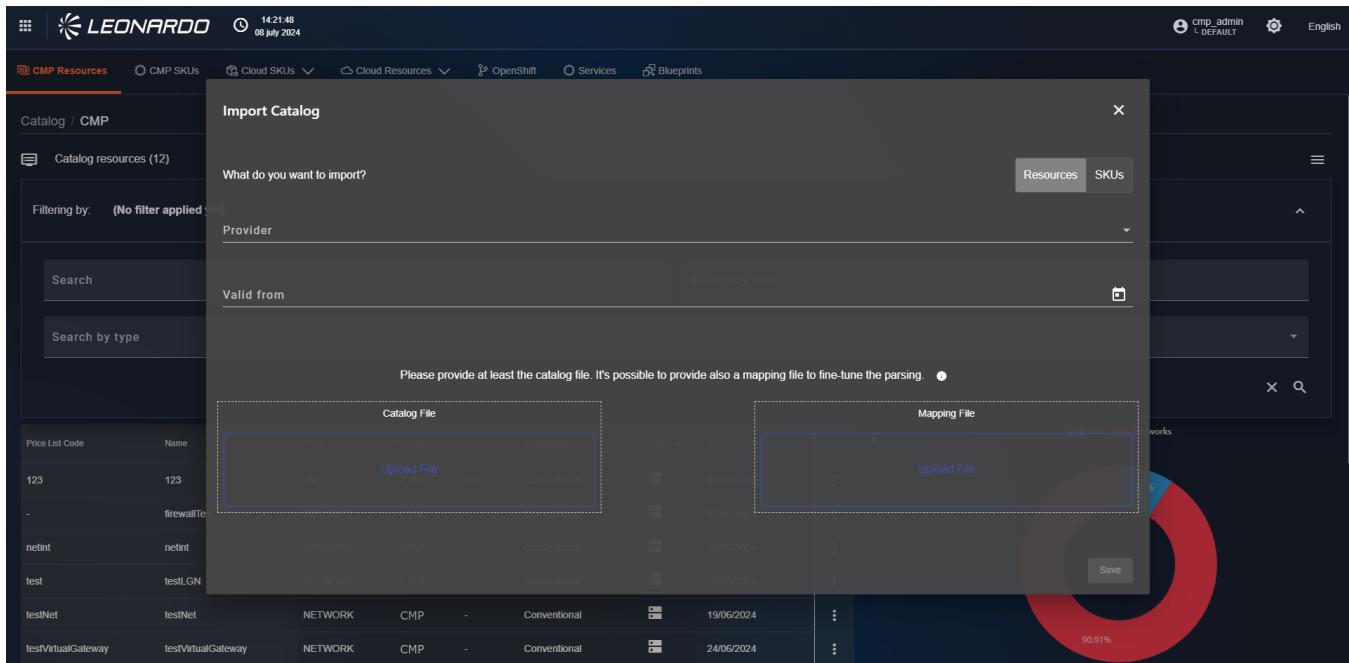

Figura 238 – Campi obbligatori per l'importazione

Furthermore, below the parameters, there are two sections for file upload. Clicking on the first square on the left will allow selecting an "XLS" file containing all the resources to be mapped. Clicking on the second square will allow inserting a mapping file, following the information shown in the "Help" section indicated with a "Question Mark" icon. Clicking on it will open a box, below the upload sections, containing all the information related to the mapping file to be inserted.

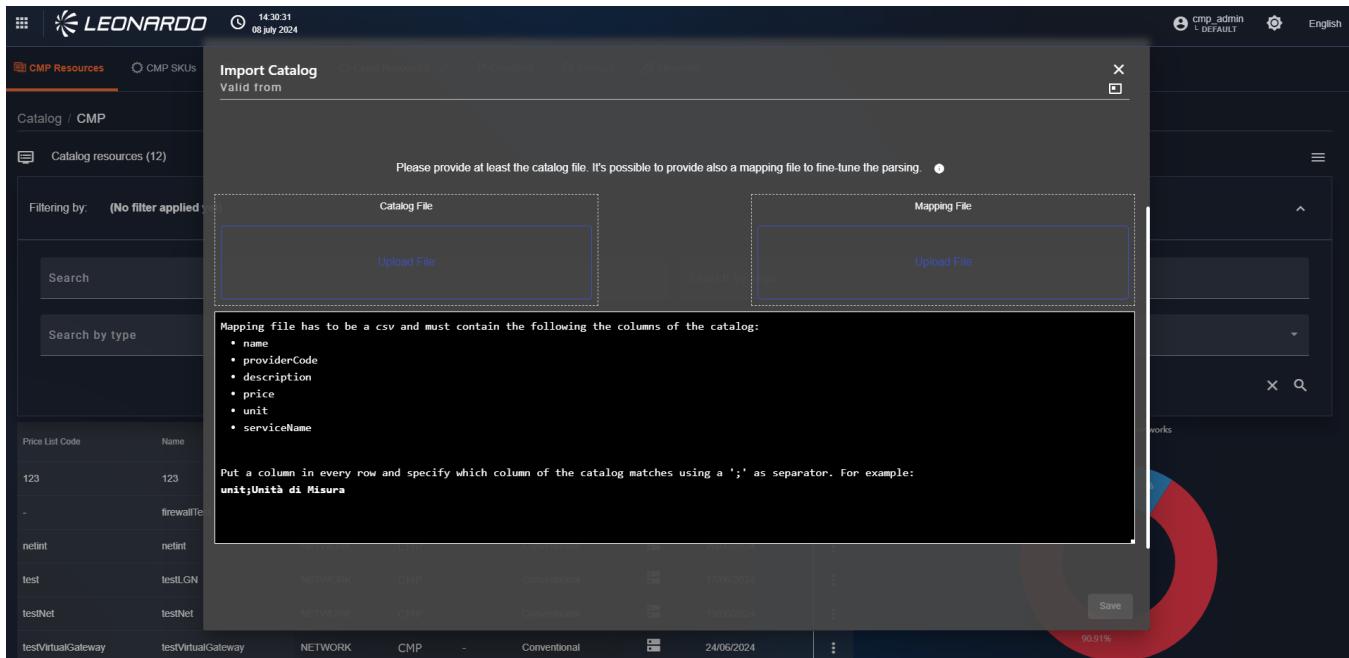

Figura 239 – Messaggio di aiuto per il file di Mapping

After entering all parameters, it will be possible to click the save button at the bottom, and we will be redirected to the imported catalogs management page, where it will be possible to monitor their insertion.

9.0.1.3.2 IMPORT MANAGEMENT

To insert a new price list, it is necessary to click the "hamburger menu" available in the upper right corner of the catalog resources page and select "Imported Catalogues".

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a header with the Leonardo logo, the date (14:11:57 08 July 2024), and user information (cmp_admin). Below the header, the main navigation bar includes links for CMP Resources, CMP SKUs, Cloud SKUs, Cloud Resources, OpenShift, Services, and Blueprints. The current page is 'Catalog / CMP' under 'Catalog resources (12)'. On the right side of the page, there are two prominent buttons: a red one labeled 'Import Catalog' and a yellow one labeled 'Imported Catalogues'. A yellow arrow points to the 'Imported Catalogues' button. Below these buttons is a search bar and a 'Search by type' dropdown. The main content area displays a table of catalog resources with columns for Price List Code, Name, Type, Provider, Size, Confidential, Provisioning on, and Creation Date. The table contains several entries, including '123', 'firewallTest', 'netInt', 'test', 'testNet', and 'testVirtualGateway'. To the right of the table is a donut chart showing resource distribution between VMs (9.09%) and Networks (90.91%).

Figura 240 – Accesso ai cataloghi importati

The user will then be redirected to the page containing all previously imported catalogs. On this page, for each row, which corresponds to an Upload, it is possible to delete the file by clicking the "Three dots" button corresponding to the row and clicking "Delete" to remove it.

Catalogs can have 3 different states:

- Deleted: indicates that the file has been replaced with a subsequent version.
- Success: indicated with a green icon, indicates that the catalog is ready and will be used starting from the indicated day.
- In progress: indicated with a yellow icon, indicates that the system is checking the validity of the entered information.

On this page, we can also note that uploads made with the same file are saved using versions, so when an already existing catalog is inserted, it will be overwritten with a higher version, and previous versions will be deactivated.

Figura 241 – Lista dei cataloghi importati

Clicking on a "Success" row in the table will open a modal. Inside, we can view a summary that contains, in addition to basic information, the number of elements, called "rows", that were found in the Excel file.

The rows available in the file can have 3 different states:

- Associated Rows: indicates that the system is able to both create the resource and associate it with a provider catalog size, allowing its use during provisioning.
- Success Rows: indicates that the system is able to create the resource but cannot establish a relationship with a provider resource.
- Failed Rows: indicates that the system cannot insert the resource.

Costs

Figura 251 – Dettaglio Risorsa dal Modulo Catalog

The detail of a resource is divided into various sections:

- Details

- Properties
- Tags & Notes
- Cost

In the Cost section, it is possible to sequentially select the Region, Zone, and Cost type to obtain a preview of the costs related to the selected resource.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for CMP, AmazonWebServices (which is highlighted in orange), Azure, AzureStack, AzureStack HCI, AzureStack Hybrid Cloud, Google, OpenShift, VMware, Blueprints, Services, Custom Services, AI Services, and PaaS. The user is logged in as 'cmp_admin' with a 'DEFAULT' role, and the language is set to English. Below the navigation, the URL is 'Catalog / Amazon Web Services (AWS) / View 643e7be8dc4fe35ba69b11d7'. The main content area displays a resource card for 'VM del Catalogo AWS (v1.1)'. This card includes a 'Details' section with the provider 'AmazonWebServices' and a 'Properties' section. At the bottom of the card, there's a 'Costs' section and a 'Cost Preview' section. The 'Cost Preview' section contains dropdown menus for 'Region' (set to 'US East (N. Virginia)'), 'Zone' (set to 'Us-east-1b'), and 'Type' (set to 'Reservation - Linux'). To the right of these dropdowns, it shows a preview: '\$ Reservation - Linux \$0.13 / 1 Hour'. A red box highlights this entire 'Costs' and 'Cost Preview' area.

Figura 252 – Sezione costi della risorsa

In the bottom right, click the "Close" button to return to the list.

9.0.2.2 “On-Premise” Resources

The management of resource catalogs in on-premise systems varies significantly, being specific to each system. In some cases, the catalog functionality is absent, while in others, it is available but does not allow automatic retrieval of resources.

The user is given the possibility to define a personalized "Cloud" catalog directly in the SCMP. In this way, it will then be possible to add the created resources to the relationships of "SCMP Catalog" resources.

To do this, it is first necessary to access the catalog resources tab of an on-premise provider. Specifically, we take "VMWare" as an example by selecting "VMWare" in the "Cloud resources" menu of the catalog module.

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with 'LEONARDO' and various links like 'CMP Resources', 'Cloud SKUs', 'Services', and 'Blueprints'. Below this is a sidebar with 'Catalog / CMP' and 'Catalog resources (28)'. A filtering section says '(No filter applied yet)'. The main area has a search bar with 'VMWare' typed in, which is also highlighted with a red box. To the right of the search bar is a 'Search by tags' field. On the far right, there's a pie chart showing resource distribution: 72.22% for VMs and 27.78% for Networks. The bottom part of the screen shows a table of catalog resources with columns for 'Price List Code' and 'Name', listing items like 'n2-standard-4', 'n2d-highcpu-8', etc.

Figura 253 – Accesso al catalogo On-premise

On the page, in the upper right, above the filter bar, we find a contextual menu. Click on the "Three lines" icon and select "Add catalog resource". In this way, we will be redirected to the provider-specific page for creating the catalog resource.

This screenshot shows the same Leonardo interface but with a different URL in the address bar: 'Catalog / VMWare'. The sidebar now shows 'Catalog / VMWare' and 'Catalog resources (0)'. The search bar contains 'PROVIDER VMWare'. On the right side, there's a contextual menu with options like 'Add Catalog Resource' (which is highlighted with a red box), 'CSV', 'JSON', 'Export', and 'Force Sync'. Below the search bar is a 'Search by tags' field. The main content area says 'No results found'. At the bottom, there's a pagination bar with 'Items per page 20' and '0 of 0'.

*Figura 254 – Creazione nuova risorsa*

At this point, the user is on the page where they can select the type of resource to create.

Figura 255 – Selezione del tipo di risorsa da creare

From the dropdown menu, select the type of resource to create. Then, click the "Next" button. You will be on the resource compilation page.

Figura 256 – Esempio di form per la creazione di una risorsa

On this page, after opening the available sections, enter all necessary parameters. In the "Cost" section at the bottom, it will be possible to add a customized price to associate with the resource. To do this, you need to select the billing interval (hourly, daily, weekly, monthly) and enter the cost related to the selected period on the right.

The screenshot shows a dark-themed web interface for creating a new resource. At the top, there's a header with the Leonardo logo, the date '23 aprile 2024', and some user information. Below the header, a navigation bar includes links for 'CMP Resources', 'Cloud SKUs', 'Cloud Resources', 'Services', and 'Blueprints'. The main area is titled 'New resource Virtual Machine del Catalogo'. On the left, there are three tabs: 'Properties', 'Tags & Notes', and 'Relations'. The 'Properties' tab is active. On the right, under the 'Costs' section, there's a dropdown menu with options: 'Hourly' (selected), 'Daily', 'Weekly', and 'Monthly'. Next to the dropdown is a text input field containing '€100'. At the bottom right of the cost section are 'Save' and 'Close' buttons.

Figura 257 – Sezione costi delle risorse

9.0.2.3 Cloud SKU

To view the list of SKUs available for a provider, select the "Cloud SKU" menu (in red in the image) at the top and select one of the available providers (in yellow in the image). The functionalities available on the pages of the different providers are identical.

9.0.2.3.3 FILTERS FOR DISPLAYED RESOURCES

The user is given the possibility to filter the displayed resource lists. At the top of the page, there is a filter section. The available filters are:

- "search": allows searching for resources with free text.
- "search by Service name": allows searching for resources related to a specific service type only.
- "search by tags" allows searching for all resources containing a specific tag. After entering one or more filters, click the "magnifying glass" button to perform the search.

Figura 262 – Dettaglio rapido delle risorse di catalogo

9.0.2.3.5 VIEWING RESOURCE DETAILS IN THE CATALOG

To view the data of a resource, click on the kebab menu for a resource and then click on "Show". After doing this, the user is on the resource page in view mode, where they can see the data but cannot modify it.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. The top navigation bar includes links for CMP, AmazonWebServices, Azure, AzureStack, AzureStack Hybrid Cloud, Google, OpenShift, VMWare, Blueprints, Services, Custom Services, AI Services, and PaaS. The main title is 'Catalog / Amazon Web Services (AWS)'. Below the title, there's a search bar and a 'Search by tags' input field. A table lists various AWS VM instances with columns for Name, Type, Provider, Size, Confidential, Provisioning on, Creation Date, and a kebab menu. One row for an 'a1-xlarge' instance has its kebab menu open, with the 'Show' option highlighted by a red box. To the right of the table is a circular chart showing 100% VM usage, with a small red bar indicating 'Conventional' usage.

Figura 263 – Accesso alla risorsa in modalità view

The screenshot shows the Leonardo Secure Cloud Management Platform interface. The top navigation bar includes links for CMP Resources, CMP SKUs, Cloud SKUs, Cloud Resources, Services, and Blueprints. The main title is 'Catalog / Google SKUs / View 661c77076979355c49a0fc4'. Below the title, the page title is 'Show Sku del Catalogo Google'. The main content area displays a table with two sections: 'Sku del Catalogo Google (v1.1)' and 'Details'. The 'Details' section shows the 'Name' as '1 Year Starter Pack' and 'Service Name' as 'MongoDB Atlas Starter'. Below the table are three tabs: 'Properties', 'Tags & Notes', and 'Costs'. A 'Close' button is located at the bottom right of the modal window.

Secure Cloud Management Platform

Figura 264 – Dettaglio Risorsa dal Modulo Catalog

The detail of a resource is divided into various sections:

- Details
- Properties
- Tags & Notes
- Cost

In the Cost section, it is possible to sequentially select the Region, Zone, and Cost type to obtain a preview of the costs related to the selected resource.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with various cloud provider icons (CMP, AWS, Azure, etc.) and user information (cmp_admin, DEFAULT, English). Below the navigation, the URL is displayed as 'Catalog / Amazon Web Services (AWS) / View 643e7be8dc4fe35ba69b11d7'. The main content area is titled 'Show VM del Catalogo AWS'. It contains several sections: 'Details' (listing System: AmazonWebServices, Name: a1-2xlarge, Size: a1-2xlarge, Update Date: 23/06/2023), 'Properties', 'Tags & Notes' (highlighted with a red box), and 'Costs'. The 'Costs' section includes dropdowns for 'Region' (US East (N. Virginia)), 'Zone' (Us-east-1b), and 'Price' (Reservation - Linux - 1 Year), with a preview of '\$0.13 / 1 Hour'. A 'Close' button is located at the bottom right of this section.

Figura 265 – Sezione costi della risorsa

In the bottom right, click the "Close" button to return to the list.

Figura 266 – Accesso ai "Services"

From the "SCMP" page, click on the tab that depicts three joined squares, 'Services', located above the breadcrumb path. After doing this, you will be on the 'Services' page, where a list of components called "Card" is displayed.

Each card refers to a specific type of service. Since there are many services, the system paginates them. At the bottom, we can use the "Item per page" field to display more results or use the arrows to navigate through the lists of services.

The screenshot shows the Leonardo Secure Cloud Management Platform's Services catalog. On the left, there is a sidebar with three filter sections: "Filter by text" (with a "Filter" input field), "Categories" (with a "Filtr" input field), and "Tags" (with a "Filtr" input field). The main area displays a grid of service cards. Each card features the AWS logo and a title. The titles are: "AWS Controllers for Kubernetes - Amazon ACM", "AWS Controllers for Kubernetes - Amazon ACM PCA", "AWS Controllers for Kubernetes - Amazon API... (partially visible)", "AWS Controllers for Kubernetes - Amazon Application...", "AWS Controllers for Kubernetes - Amazon CloudFront", and "AWS Controllers for Kubernetes - Amazon CloudTrail". Each card also has a "Edit" button.

Figura 267 – Pagina dei servizi

9.0.3.1.1 “SERVICES” PAGE FILTERS

To facilitate the user in searching for a specific service, a side filter section has been added to the page. Inside, we can find three combinable filters:

- "Filter by Text": by entering text in this field, the list of services will be updated to show services that include the entered text in their title or description (orange in the image).
- "Categories": it is possible to filter the list by one or more service categories. The category is manually entered during the service creation phase (green in the image).
- "Tags": it is possible to select one or more tags to display only services that have been configured with that tag (red in the image).

By using the filters in combination, it will be possible to display only the services that satisfy all specified conditions. In other words, the query will return only the services that match all set criteria.

Figura 268 – Filtri disponibili

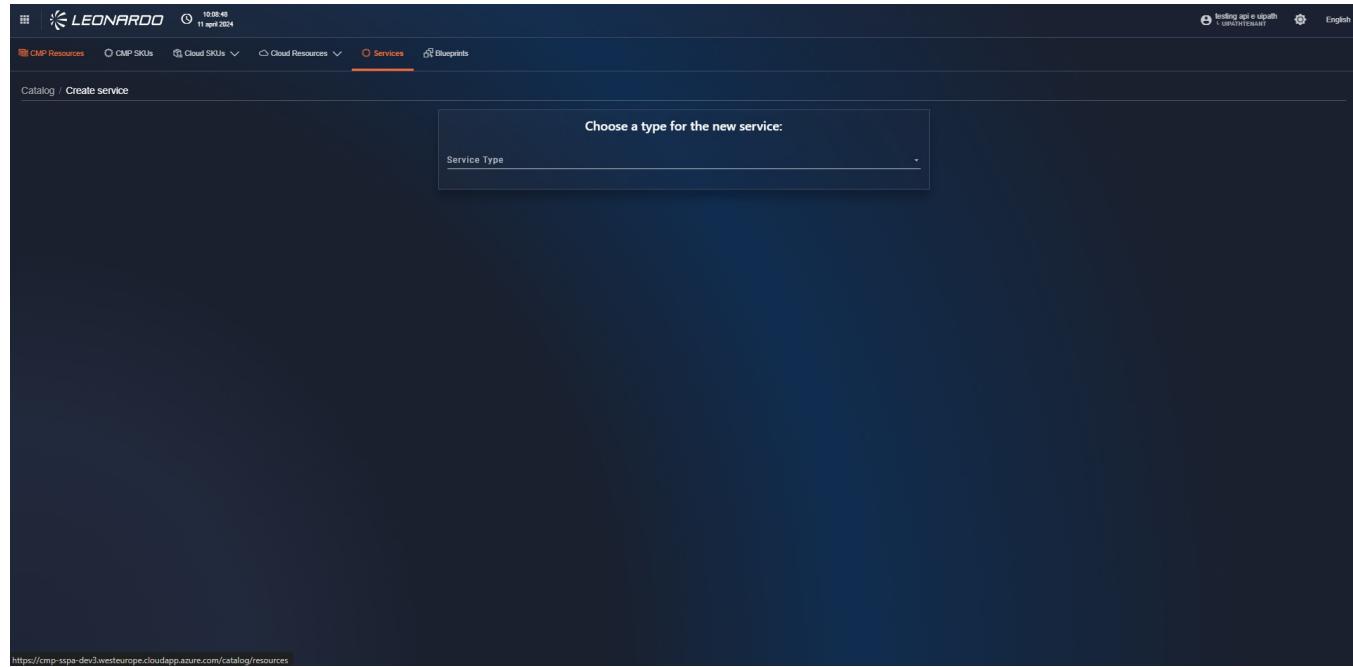

9.0.3.1.2 CREATING SERVICES

From the "Services" page, the user can create a Service by accessing the appropriate section as shown in the figure.

Figura 269 – Accesso al form di creazione del Service

On the creation page, it is necessary to select a service type using the "Service Type" field to display its mandatory parameters.

*Figura 270 – Selezione della tipologia
di servizio*

In the following paragraphs, we will analyze the individual service types in detail.

9.0.3.1.2.1 “Standard” Services

The first type of services available for the SCMP are “Standard” services. These services are natively integrated into the system, and their operation cannot be modified by the user.

List of services offered:

- CosmosDb Cassandra SQL
- CosmosDb Core SQL
- CosmosDb Mongo
- Kafka 3.2.1 on Ubuntu 20.04 LTS
- Kafka 3.2.1 on Ubuntu 22.04 LTS
- Mongo DB 5.0 on Ubuntu 20.04 LTS
- Mongo DB 6.0 on Ubuntu 20.04 LTS

- Mongo DB 6.0 on Ubuntu 22.04 LTS
- MySQL DB 8.0 on Ubuntu 20.04 LTS
- MySQL DB 8.0 on Ubuntu 22.04 LTS
- PostgreSQL 14 on Ubuntu 20.04 LTS
- PostgreSQL 14 on Ubuntu 22.04 LTS
- Redis DB 7.0 on Ubuntu 20.04 LTS
- Redis DB 7.0 on Ubuntu 22.04 LTS

To insert a new service, it is necessary to fill in all fields in the properties section, specifically:

- "Categories": enter free text in the field and select an already configured category from the dropdown, or it is possible to add a new category by clicking the "+" button in the dropdown (orange in the page).
- "Name": the name of the service that will be displayed on the corresponding card.
- "Description": the description of the service that will be shown on the relative card.
- "Upload File": by clicking this control, it will be possible to select an "image" type file from your PC that will be displayed on the service card.
- "Related Software": in this section, you can select one or more "Standard" software that will then be used during provisioning.

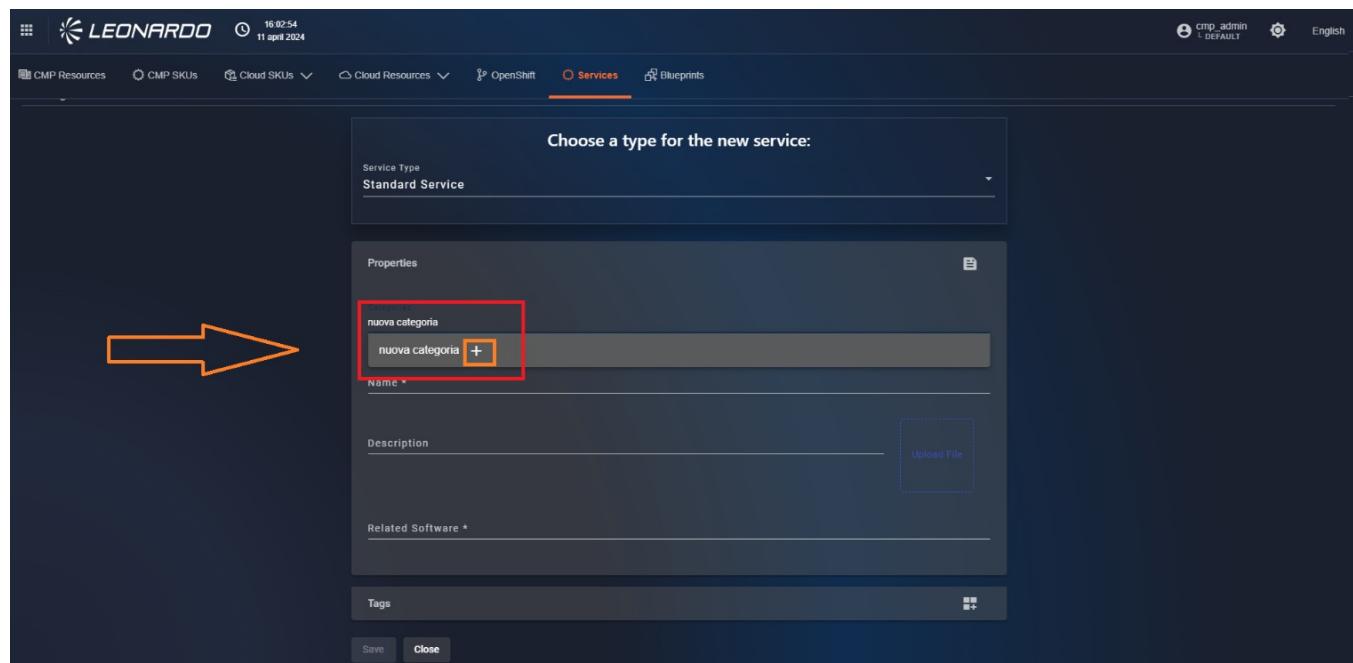

Figura 271 – Aggiunta nuova categoria

Once all data has been entered, the service can be saved using the "save" button in the bottom right. A confirmation modal will be displayed, and the user will be redirected to the list of available services.

9.0.3.1.2.2 "Custom" Services

The user is given the possibility to define "Custom" services by uploading a zip file containing all the necessary files for execution.

In this specific case, the SCMP system is only used to save the service and launch its execution, so it is not possible to check the correctness of the process, which will have to be managed by the user.

all are orchestrators, but with different functionalities and purposes:

1. Ansible:

- **Server and application orchestration:** Ansible automates the configuration and management of servers and applications across different platforms.
- **Executes YAML playbooks:** Ansible uses YAML playbooks to define instructions to be executed on servers.
- **Does not require an agent:** Ansible is agentless; it does not require software installation on the servers to be managed.

2. Bicep:

- **DSL language for Azure:** Bicep is an Azure-specific DSL that facilitates defining infrastructure as code.
- **Creates ARM templates:** Bicep translates files into ARM (Azure Resource Manager) templates that Azure uses to create resources.
- **Integrates with Azure DevOps:** Bicep integrates with Azure DevOps for lifecycle management.

3. Kubernetes:

- **Container orchestration:** Kubernetes is the leading platform for large-scale container orchestration.
- **Automates deployment and management:** Kubernetes automates the deployment, scaling, and management of containers in clusters.
- **Offers an ecosystem of tools:** Kubernetes offers a rich ecosystem of tools and libraries for container management.

4. Terraform:

- **Infrastructure as Code:** Terraform is an open-source tool for managing infrastructure as code.
- **Defines infrastructure in HCL files:** Terraform uses HCL configuration files to define the desired infrastructure.
- **Supports different providers:** Terraform supports a wide range of cloud and on-premise providers.

**In summary:**

- **Ansible:** Ideal for automating server and application configuration.
- **Bicep:** Great for defining infrastructure on Azure in a readable way.
- **Kubernetes:** Powerful tool for large-scale container orchestration.
- **Terraform:** Flexible for managing infrastructure across multiple cloud providers or on-premise.

In the configuration of "Custom" services, we can identify a common section composed of the initial parameters:

- "Categories": enter free text in the field and select an already configured category from the dropdown, or it is possible to add a new category by clicking the "+" button in the dropdown.
- "Name": the name of the service that will be displayed on the corresponding card.
- "Description": the description of the service that will be shown on the relative card.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with the Leonardo logo, user info (cmp.admin), and language selection (English). Below the navigation, a breadcrumb trail says 'Catalog / Create service'. The main area has a title 'Choose a type for the new service:' followed by a dropdown menu showing 'Custom Service'. Below this, a 'Properties' section is expanded, containing fields for 'Categories', 'Name *' (which is highlighted with a red box), 'Description' (also highlighted with a red box), 'Script Type *' (with a dropdown menu), and an 'Upload File' button. A red arrow points to the 'Properties' section.

*Figura 272 – Parametri generali dei
"Custom Services"*

Subsequently, it is necessary to choose the type of "orchestrator" to use and insert the corresponding ".zip" file in the "Upload File" section. The specifications for each type are indicated below:

| Script type | Mandatory .zip file content |
|-------------|-----------------------------|
| Ansible | Instance.yaml - Vars.yaml |

| Script type | Mandatory .zip file content |
|-------------|-------------------------------------|
| Bicep | Main.bicep - Main.parameters.json |
| Kubernetes | Only .YAML files |
| Terraform | Main.tf - Variable.tf - Provider.tf |

In addition to the files described in the table, it is possible to add a ".png / .jpg / .img" file to the zip that will then be used as the image for the corresponding Card.

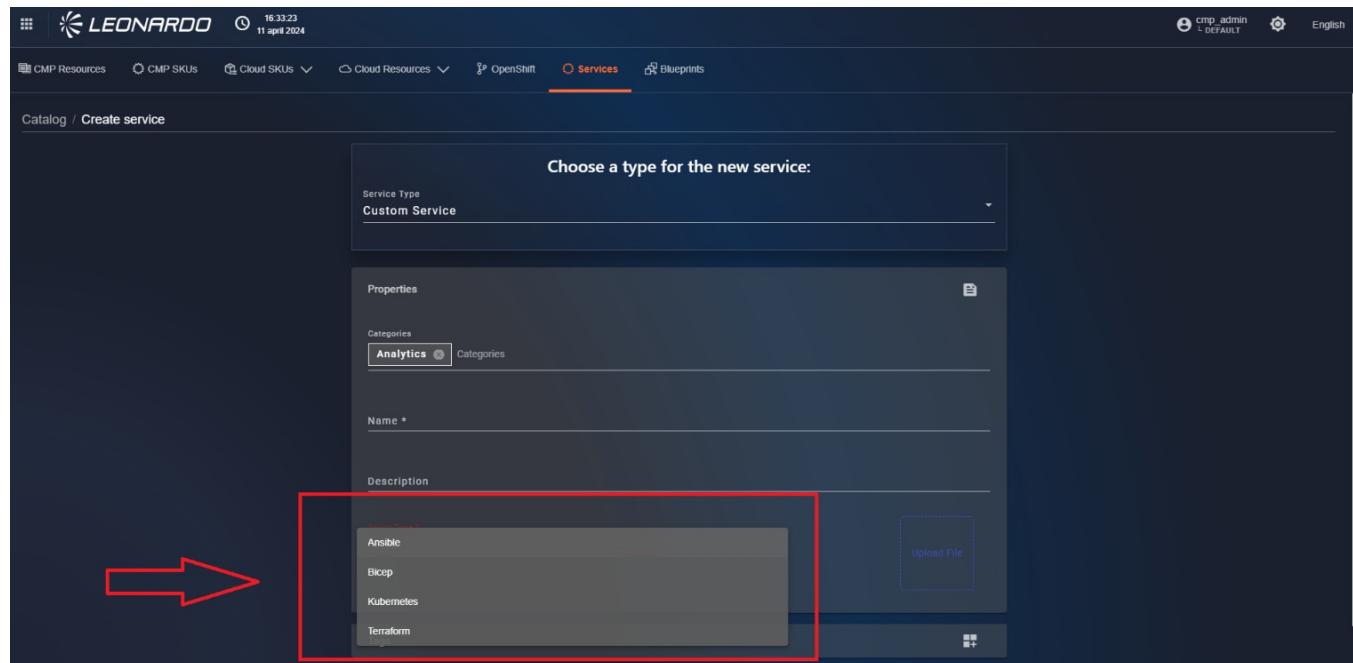

Figura 273 – Selezione della tipologia
di Orchestratore

Once all data has been entered, the service can be saved using the "save" button in the bottom right. A confirmation modal will be displayed, and the user will be redirected to the list of available services.

9.0.3.1.2.3 "Azure Pipeline" Services

The user is given the possibility to define "Azure Pipeline" services. This type of service allows the SCMP to invoke the execution of a remote DEVOPS pipeline usable through the provisioning functionality.

In the configuration of "Azure Pipeline" services, we can identify a general section composed of the parameters:

- "Categories": enter free text in the field and select an already configured category from the dropdown, or it is

possible to add a new category by clicking the "+" button in the dropdown. "Name": the name of the service that will be displayed on the corresponding card.

- "Description": the description of the service that will be shown on the relative card.

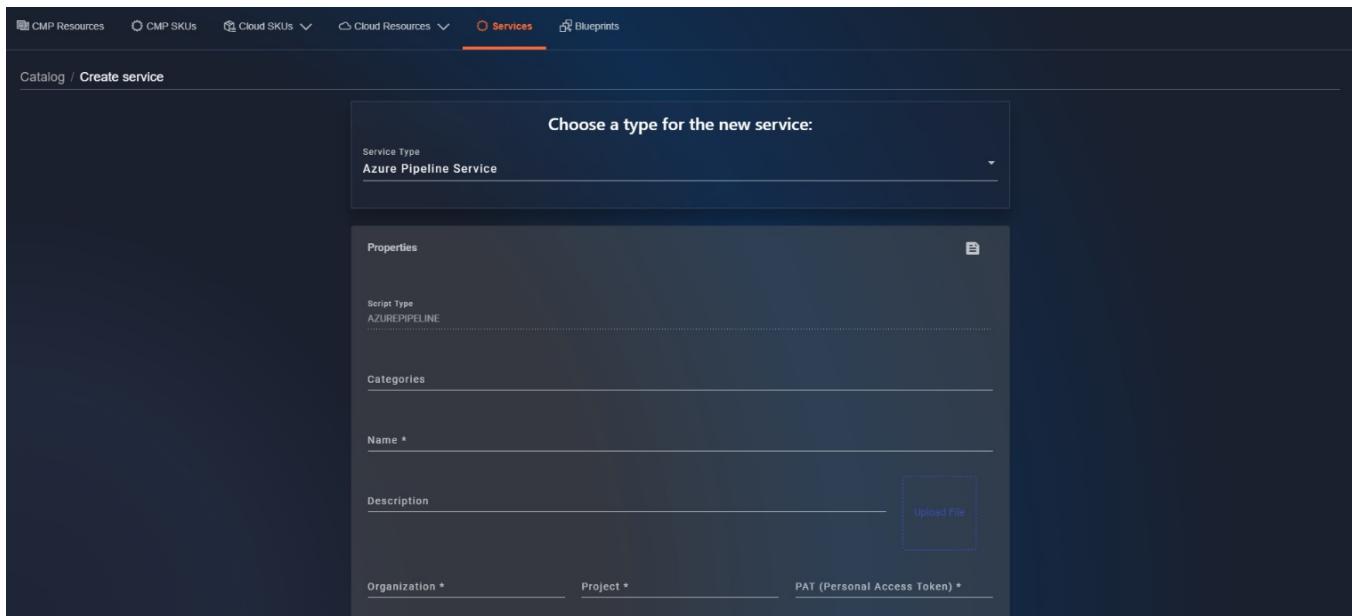

Figura 274 – Parametri generali "Azure pipeline service"

Also for this service, it will be possible, through the "Upload File" field, to insert a ".zip" file that contains a ".png / .jpg / .img" file within the zip, which will then be used as the image for the corresponding Card.

Subsequently, it will be necessary to fill in the specific parameters of the service, in particular, it will be necessary to insert:

- "Organization": the name of the DevOps organization where the pipeline resides.
- "Project": the name of the DevOps project where the pipeline resides.
- "PAT": the private personal access token generated from the "Azure DevOps" portal. Once these fields are filled, it is possible to click the "Test" button to verify the entered parameters.

If the entered data is not valid, various error messages will be displayed indicating which parameter is incorrect (e.g., "Specified Organization is not valid.") and the button will turn red with "KO" written. When all parameters are correct, the button will turn green with "OK" written.

Figura 275 – Parametri specifici delle Pipeline

After successfully performing the test, it will be possible to select the pipeline to execute using the "Select Pipeline" field and clicking on an available option.

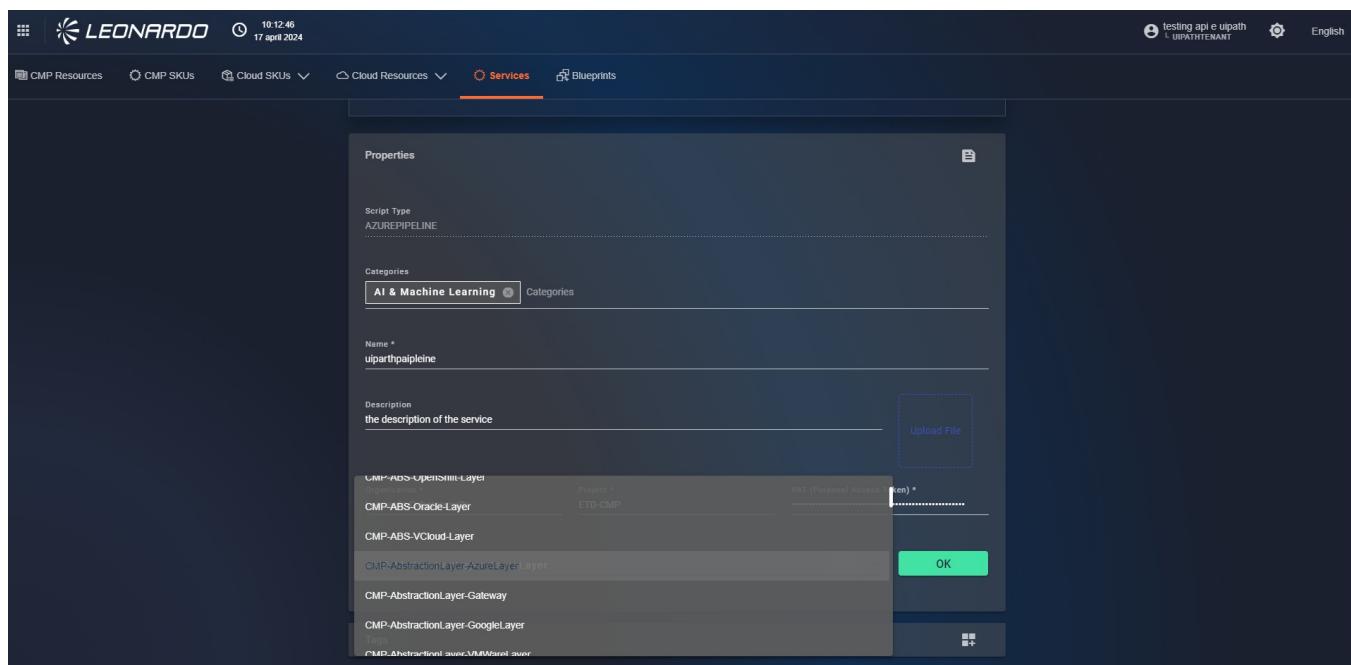

Figura 276 – Selezione della pipeline

Once all data has been entered, the service can be saved using the "save" button in the bottom right. A confirmation modal will be displayed, and the user will be redirected to the list of available services.

9.0.3.1.2.4 "HELM" Services

We can also configure "HELM" type services within the SCMP. For the configuration of these services, it is necessary to enter these parameters:

- "Categories": enter free text in the field and select an already configured category from the dropdown, or it is possible to add a new category by clicking the "+" button in the dropdown.
- "Chart name": the actual name of the HELM CHART that will be used.
- "Chart repository": the URL relative to the repository containing the HELM CHART to be used.
- "Repository username": if the repository indicated above is private, it will be necessary to provide a username to access the repository.
- "Repository password": if the repository indicated above is private, it will be necessary to provide the password for the user indicated above.
- "Chart version": indicates which version of the chart to use.
- "Cluster": indicates which cluster to install the application on.
- "Description": the description of the service that will be shown on the corresponding card.
- "Image": in this section, it is possible to insert a .png file that will be used as the service image on the interface.
- "Immutable": Selecting this flag during provisioning will prevent modification of settings, and the service will be automatically configured based on.
- "Namespace": enter the name for the namespace where the deployment should occur.
- "Name": the name of the service that will be displayed on the corresponding card.
- "Configurations": in this section, it is possible to upload the values.yaml file that will be used for provisioning.

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there are navigation links: SCMP Resources, SCMP SKUs, Cloud Resources, Cloud SKUs, Services (which is highlighted in orange), Blueprints, and Reports. On the right side, there are user profile and language settings. Below the header, the page title is "Catalog / Create service". A modal window is open, titled "Choose a type for the new service:", with "Helm Service" selected under "Service Type". The main form area has sections for "Properties" and "Categories". Under "Properties", fields include "Chart Name *", "Chart Repository", "Repository Password", "Repository Username", and "Chart Version *". The "Chart Version" field contains "latest".

*Figura 277 – Parametri generali dei
"HELM Services"*

For these services, it is also possible to prevent any kind of service modification by selecting the "immutable" option and entering a namespace and a cluster in which to deploy the applications.

This screenshot shows the same interface as the previous one, but with additional configuration options visible. The "Cluster" dropdown is set to "Cluster". The "Description" field is empty. Under the "Image" section, there is a "Upload File" button. The "Immutable" checkbox is checked. In the "Namespace" section, the "Name *" field is empty. The "Script Type *" dropdown is set to "HELM". Under the "Configuration (values.yaml)" section, there is a "Upload File" button. The overall layout is identical to the first screenshot, but with more detailed configuration options shown.

Figura 278 – Parametro "immutable"

Once all data has been entered, the service can be saved using the "save" button in the bottom right. A confirmation modal will be displayed, and the user will be redirected to the list of available services.

9.0.3.1.3 EDITING AND DELETING SERVICES

In addition to creating a Service, it is possible to view, modify, and delete it.

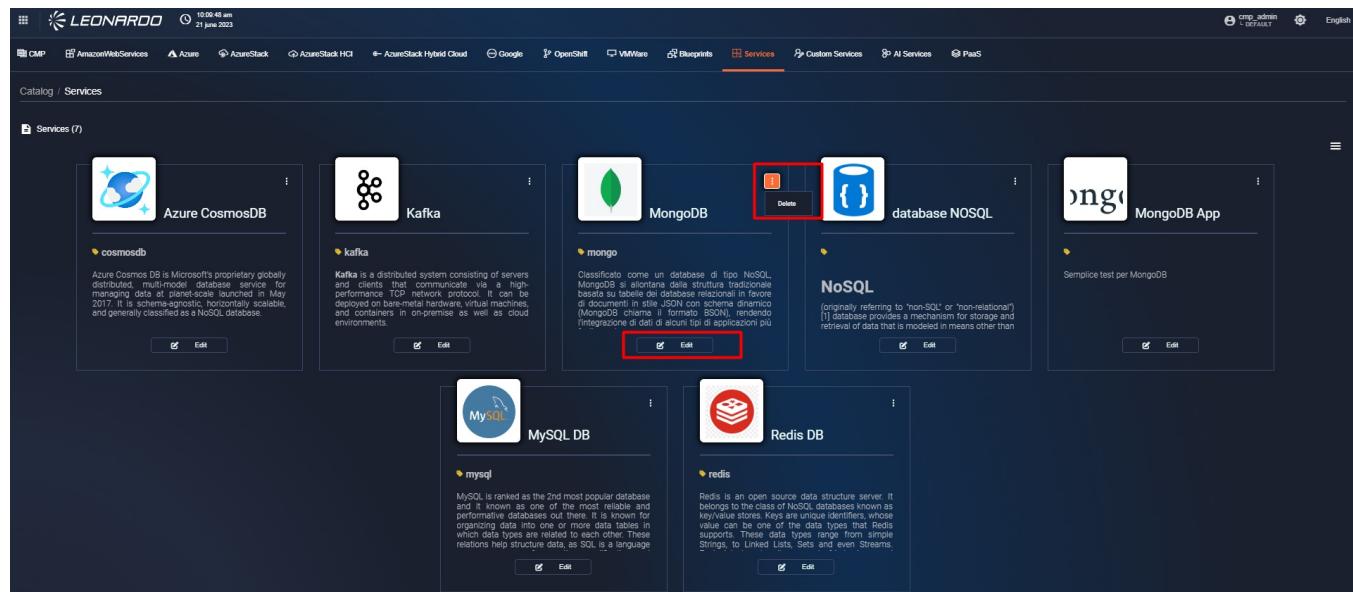

Figura 279 – Operazioni disponibili per i Services

- To modify the information of a "Service", click the "Edit" button within the card. Afterward, within the form, the user can modify the necessary data. After performing the edit operations, in the bottom right, click the "Submit" button. After doing this, the user is on the "Service" page.

| isAnewName | descrizione32 | 10/04/2024 09:46:51 | ✓ |

*Figura 284 – Aggiunta nuova Blueprint*

The user is redirected to step 1 of the "Blueprint" creation where all general information about the blueprint can be entered. After entering the data, click the "Save blueprint" button to save the blueprint draft. For details on the status, please refer to the next paragraph.

The screenshot shows a dark-themed web application interface. At the top, there's a navigation bar with the Leonardo logo, the date '10 aprile 2024', and various menu items like 'CMP Resources', 'Cloud SKUs', 'Cloud Resources', 'Services', and 'Blueprints'. The 'Blueprints' tab is currently selected. Below the navigation, a breadcrumb trail reads 'Catalog / Blueprints / Add Blueprint'. The main content area is titled '1 Definition' and contains several input fields: 'Description', 'Name *' (marked with a red asterisk), 'Notes', 'Tier', and 'Version'. At the bottom right of this form is a blue button labeled 'SAVE BLUEPRINT'.

Figura 285 – Blueprint step 1

A confirmation modal for insertion will open. Once "yes" is clicked to continue, the user will see step 2 of blueprint creation.

Clicking "No" will cancel the draft insertion.

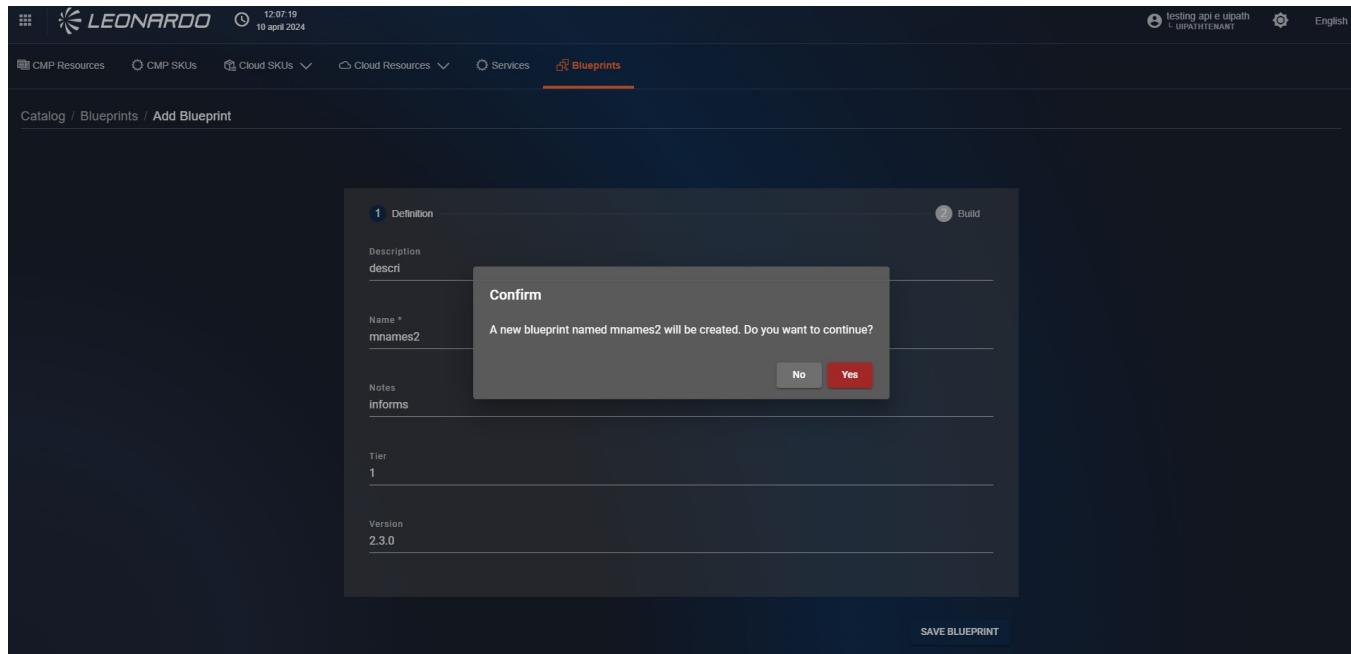

Figura 286 – Blueprint conferma della bozza

In step 2 of creating a Blueprint, it is necessary to click within the "Upload File" field and, using the Windows upload window, select the ".CSAR" file that contains the Blueprint.

After selecting a file, click the "Upload" button in the bottom right to start the file validation process, following the list of statuses in the paragraph below.

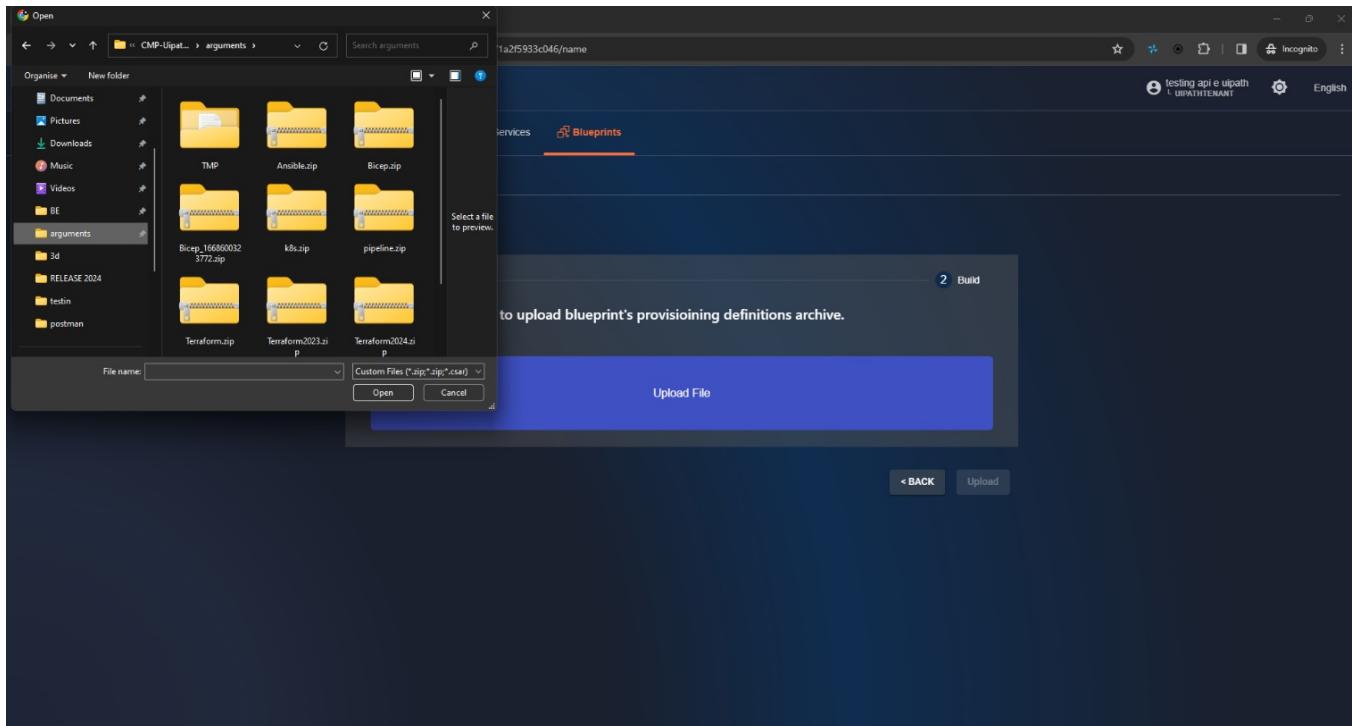

Figura 287 – Inserimento file

9.0.3.2.2 BLUEPRINT STATUS

Since "Blueprints" are complex objects that must be properly configured, a file validation system has been implemented to allow the use of only "Blueprint" services that are correctly configured.

Specifically, there are 4 possible "STATUSES":

1. READY TO USE (green checkmark): indicates that the blueprint is configured correctly and can be used during "Provisioning".
2. VERIFY (yellow circle): indicates that the SCMP is validating the content of the Blueprint.
3. FAILED (red "X"): indicates that the uploaded file is not valid and must be re-entered by the user after correction.
4. DRAFT (orange): indicates that the "blueprint" has been created as a draft but does not contain the necessary CSAR file. Once the file is inserted, the blueprint will change to VERIFY status.

| Name | Description | Creation Date | Status |
|-----------------|---------------|---------------------|--------|
| manual | only manual | 10/04/2024 08:09:07 | |
| name | dscr | 10/04/2024 09:45:36 | |

Blueprint's archive upload success! OK

Figura 288 – Status delle Blueprint

9.0.3.2.3 VIEWING, EDITING, AND DELETING BLUEPRINTS

In the table of available blueprints, for each row, on the right, there is a contextual menu. Once opened, it contains three functionalities:

The "View" functionality: allows viewing the details of the blueprint. Once clicked, the user will be redirected to the blueprint viewing page.

- Properties: in this section, it is possible to modify the basic information of the blueprint (Figure 241).
- Provisioning plan: in this section, there is the bpmn graph which provides a graphical representation of the "steps" foreseen by the "Blueprint" (Figure 242). This section contains three buttons to modify the plan: the first, shaped like a "folder", allows uploading a new BPMN file to the edit page; the second, "download", allows downloading the currently displayed bpmn file; the third, on the right, "Upload", overwrites the current bpmn file available for the blueprint.
- Topology: The topology of a blueprint is the arrangement of components in a Kubernetes cluster. In this section, we can graphically visualize the system structure among different pods, services, and components (Figure 243).
- Update Model: in this section, it is possible to upload the CSAR file. By making this modification, the Blueprint will return to the "VERIFY" state to validate its content (Figure 244).

*Figura 289 – Sezioni della pagina
Blueprint "view"*

The "Edit" functionality allows viewing and modifying all blueprint parameters, including the related CSAR file. It contains the following sections:

- Properties: in this section, it is possible to modify the basic information of the blueprint.
- Provisioning plan: in this section, there is the bpmn graph which provides a graphical representation of the "steps" foreseen by the "Blueprint". This section contains three buttons to modify the plan: the first, shaped like a "folder", allows uploading a new BPMN file to the edit page; the second, "download", allows downloading the currently displayed bpmn file; the third, on the right, "Upload", overwrites the current bpmn file available for the blueprint.
- Topology: The topology of a blueprint is the arrangement of components in a Kubernetes cluster. In this section, we can graphically visualize the system structure among different pods, services, and components.
- Update Model: in this section, it is possible to upload the CSAR file. By making this modification, the Blueprint will return to the "VERIFY" state to validate its content.

9.0.4 Reporting Tools

The reporting functionality, specific to each feature, allows generating global reports of the information available for the various providers. Within the pages, the possibility will also be given to create files to facilitate information sharing.

To access the functionality, above the breadcrumb path, click on the "Reports" tab.

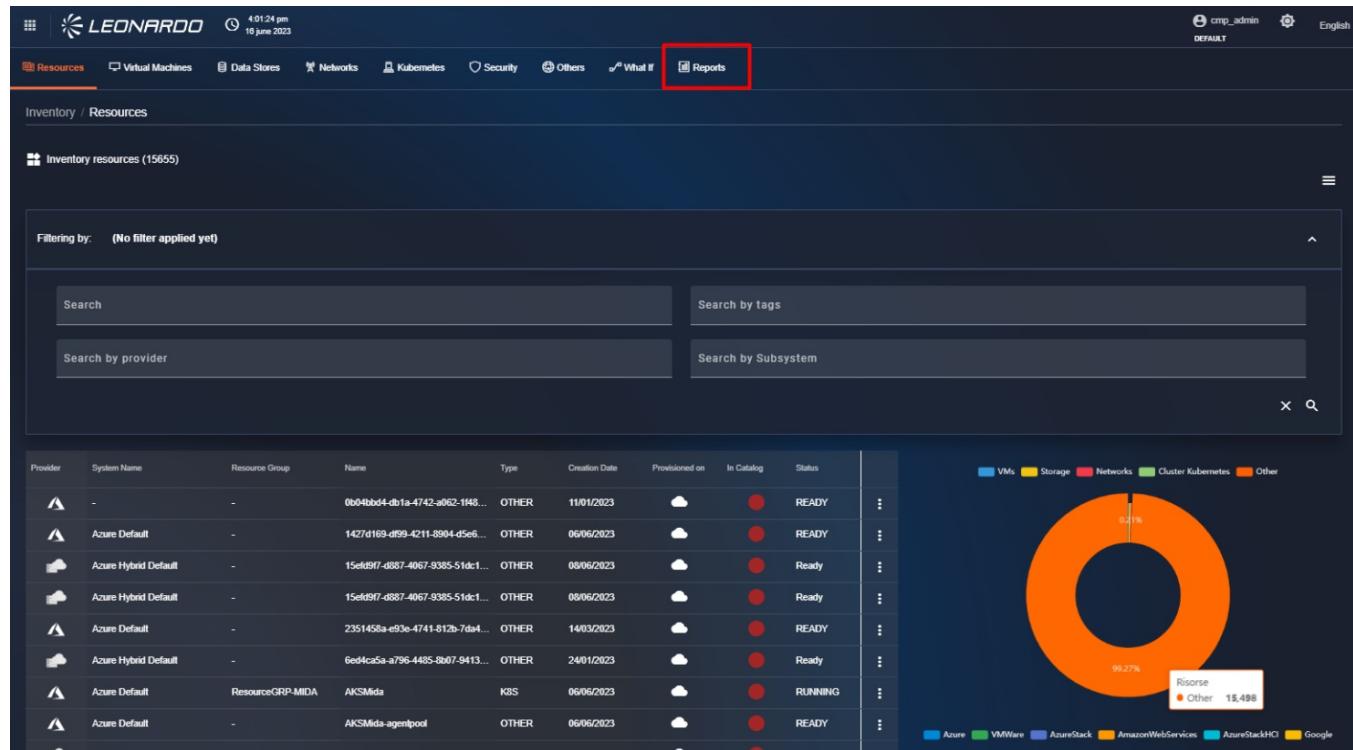

Figura 295 – Accesso al report di Catalogo

9.0.4.1 Available Report Types

CATALOG Missing SKU – List of provider SKUs not present in the SCMP catalog price list, if applicable. Consequently, the customer price for missing SKUs will be given by applying the discount/markup percentage configured in the Administration section.

9.0.4.2 Creating a Report

In the upper right of the page, we can click on the "New Report" button to start creating a report. Specifically, a modal will be displayed containing the list of available report types.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a header with the Leonardo logo, the date (12 June 2024), and a timestamp (14:14:37). Below the header, a navigation bar includes links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is currently selected, indicated by an orange underline. Under the Reports link, there are two tabs: 'Ready' (selected) and 'Scheduled'. A modal window titled 'New report' is centered over the table, prompting the user to 'Select a report type from the list'. Inside the modal, there's a sub-section titled 'Inventory Summary' with the sub-instruction 'Report about the number of resources related to specific filters'. At the bottom of the modal, there are 'Cancel' and 'Configure' buttons. The main table below the modal lists various reports with columns for Sub Category, Provider, Creation Date, Status, and Actions. Most reports are listed under the 'AZURE, GOOGLE, OPENSHIFT' provider and have a status of 'READY'.

| Sub Category | Provider | Creation Date | Status | Actions |
|--------------|--------------------------------------|-----------------------|--------|---------|
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 2024 - 10:05 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 2024 - 10:01 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 2024 - 8:32 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 2024 - 8:20 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 01/06/2024 - 12:30 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 07/06/2024 - 12:30 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 06/06/2024 - 12:29 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, OPENSHIFT | 05/06/2024 - 12:29 AM | READY | ... |
| SUMMARY | AZURE, GOOGLE, KUBERNETES, OPENSHIFT | 03/06/2024 - 2:39 PM | READY | ... |
| SUMMARY | AZURE, GOOGLE, KUBERNETES, OPENSHIFT | 03/06/2024 - 12:18 PM | READY | ... |
| SUMMARY | AZURE, GOOGLE, KUBERNETES, OPENSHIFT | 03/06/2024 - 12:07 PM | READY | ... |

Figura 296 – Creazione nuovo report

Once the report type is selected, click the "Configure" button to select the providers to include in the report. In the newly opened window, we find the "Provider" field which allows selecting one or more existing providers in the system. Subsequently, it is possible to select one or more subsystems to include in the report. If no providers are selected, no subsystem can be selected. Finally, there is a "tag" section to include only resources that have the entered tag.

Secure Cloud Management Platform

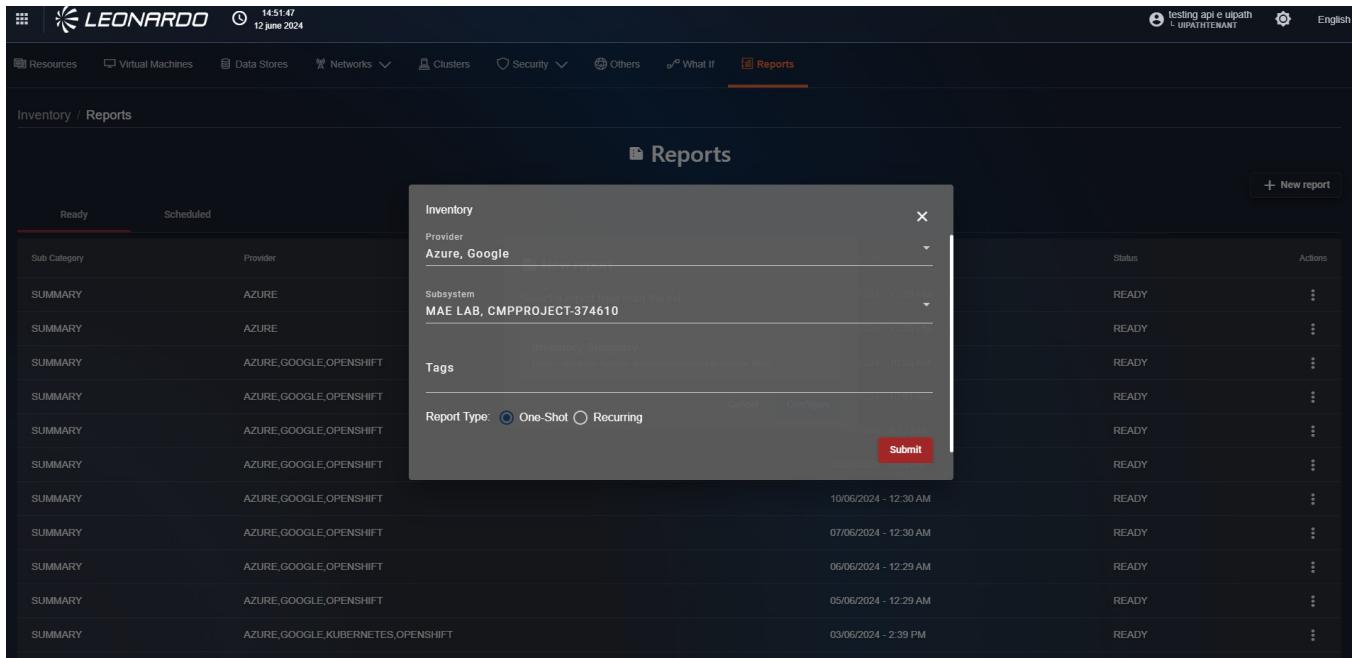

Figura 297 – Configurazione del report

At this point, the user can choose between two different actions:

- Create a static report that will be saved in the system.
 - Schedule a recurring report generation.

To confirm the creation of a static report, verify that "One-Shot" has been selected for the "Report type" field and click the "Submit" button at the bottom.

After a loading period, the newly generated report will be visible in the list.

Figura 298 – Lista dei report effettuati

9.0.4.2.1 REPORT SCHEDULING

If, on the other hand, you want to schedule automatic report execution, you will need to select "Recurring" for the "Report Type" field. In this case, the window will update to show additional parameters for configuring the periodic report.

The parameters to be entered are:

- Period: allows selecting the frequency of report delivery (hourly, daily, ...).
 - "Receive only if not empty" if selected, the file will not be sent if it contains no information.
 - Report Language: allows selecting the language used in the report.
 - File format: allows selecting one or more file types to include in the email.
 - User E-mails: allows entering an email to which reports will be sent. After entering an email, it is necessary to press "Enter" on the keyboard to confirm its entry. Once pressed, the newly entered email will move to the bottom box, and the field will be cleared to allow the entry of a new email, if necessary.

9.0.4.2.2 LIST OF SCHEDULED REPORTS

To view the list of scheduled reports, select the "Scheduled" tab in the upper left of the reports page.

The screenshot shows the 'Reports' section of the Leonardo platform. At the top, there are tabs for 'Ready' and 'Scheduled'. The 'Scheduled' tab is highlighted with a red box and a red arrow pointing to it from the text above. Below the tabs, there are filters for 'Period' (set to 'Hourly'), 'Language' (set to 'EN'), and 'Recipients' (set to 'noame@gmail.com'). To the right, there is a table with one row showing the last send time as '12/06/2024 - 1:21 PM'. At the bottom right, there are pagination controls for 'Items per page' (set to 20), 'Page' (1-1 of 1), and navigation arrows.

Figura 301 – Lista dei report schedulati

On this page, you will find the list and related information of the scheduled reports present in the system. For each result, it is possible, by clicking the "Three dots" button on the right, to perform three operations:

- View the last generated report.
- Edit the schedule settings; it will not be possible to modify the selected providers or subsystems.
- Delete the schedule to stop sending emails.

9.0.4.2.3 USING REPORTS

Clicking on a row of a static report, or using the "Show report" button available for scheduled reports, will display the detail page of the selected report.

In the summary of the Inventory report, there is a "Stats" section which contains the number of disks, interfaces, networks, and virtual machines belonging to the selected provider.

Below the "Stats" section, there are the filters used by the user to generate the report.

Below the filters, there is a summary table of resources belonging to the providers. On the right, there are two buttons: "PRINT" and "EXPORT".

Clicking the "PRINT" button, a print preview modal appears. To print the report, click the "Print" button in the bottom right, at which point the printing of said report will begin.

Clicking the "EXPORT" button, it is possible to export the report in ".csv", ".json", or ".pdf" format.

To return to the "Results" tab, in the bottom right, click the "CLOSE" button or in the upper left, click the left-pointing arrow, next to the report title.

Figura 303 – Dettagli dei report

Cost and Usages

SCMP collects, through the APIs made available by the providers, the cost details of inventory assets.

In the event that providers do not expose cost data, this data can be editorially entered into the catalog so that it can then be counted within this functionality.

Costs are collected with a breakdown by daily cost and by resource. Subsequently, as with the metrics section, the data is normalized and aggregated to allow for a uniform dashboard visualization.

■ Attention

As also indicated on the cost dashboards, data related to the last 48 hours has not yet been confirmed by the respective providers. We can use this table as a reference, but for details, it is necessary to check the specific provider's documentation.

For example:

| Cloud Provider | Tool/Method | Update Times | Notes |
|----------------|------------------------------|-------------------------------|--|
| Azure | Cost using export file | 6/7 days | in the first 6 days of the following month, the costs of the previous month are consolidated |
| Azure | Cost Management | 8-24 hours | Consolidated data updated within 24/48 hours; greater delay compared to others. |
| Google Cloud | Billing Dashboard | A few hours, maximum 24 hours | Near real-time updates; consolidation up to 24 hours. |
| Google Cloud | BigQuery Export | Every hour | Minimum delay for advanced analysis via BigQuery. |
| Oracle Cloud | Cost Analysis | 4-6 hours, maximum 24 hours | some services may have greater delays. |
| AWS | Cost Explorer | 8-24 hours | Aggregated data updated within 12-24 hours. |
| AWS | Cost and Usage Reports (CUR) | 8-24 hours | Detailed reports with similar delay. |
| AWS | CloudWatch Metrics (Billing) | Every 6 hours | Near real-time monitoring. |

| Cloud Provider | Tool/Method | Update Times | Notes |
|----------------|---------------|--------------|--|
| AWS | Budget Alerts | 3-5 hours | Rapid notifications when budget thresholds are exceeded. |

Cost Dashboard

To access the cost section, use the menu as shown in the figure.

Figura 304 – Access to Costs

At this point, the user will find themselves within the "Dashboard" tab page of costs. On this screen, we can note in order:

- The "Cost trend" value, which indicates the total costs for the selected period.
- The "Cost difference" value, which indicates the markup applied in the selected period.
- A "Cloud provider Spend" bar chart, which indicates the cost billed to the client for each provider in the selected period.
- An "Effective Spend" bar chart, which indicates the effective cost of resources on the provider.

At the bottom, there will be several resource aggregation charts, for example, by Region or Service Type, as indicated by the respective cloud providers, and as we will analyze later, it will be possible to customize the available charts and sections.

Figura 308 – Cost functionality filters

Overview of the data shown

"GENERAL" SECTION

In the first section, summary charts representing provider and SCMP costs are shown to the user based on the applied filters.

In detail:

- Provider Cost Difference:** chart containing the cost difference between the sum of the original provider costs and the sum of the costs agreed upon with the provider.
Useful for identifying savings obtained through negotiation or resale compared to list prices.
- Customer Cost Difference:** chart containing the cost difference between the sum of SCMP costs charged to the customer and the sum of the original provider costs.
Used to monitor profit margins and the competitiveness of prices offered to the customer.
- Customer Cost Trend:** chart containing the total SCMP costs charged to the customer, with the respective profit/loss percentage.
Allows observing economic trends over time and detecting cost peaks or anomalies.
- Provider Spend:** chart containing the sum of original costs for each provider.
Allows identifying which providers the spending is concentrated on and the level of dependency.

- **Provider Agreement Spend:** chart containing the sum of agreed costs for each provider.
Useful for comparing the effectiveness of commercial agreements with each provider.
- **Effective Spend:** chart containing the sum of SCMP costs charged to the customer for each provider.
Helps evaluate the profitability obtained from each provider.

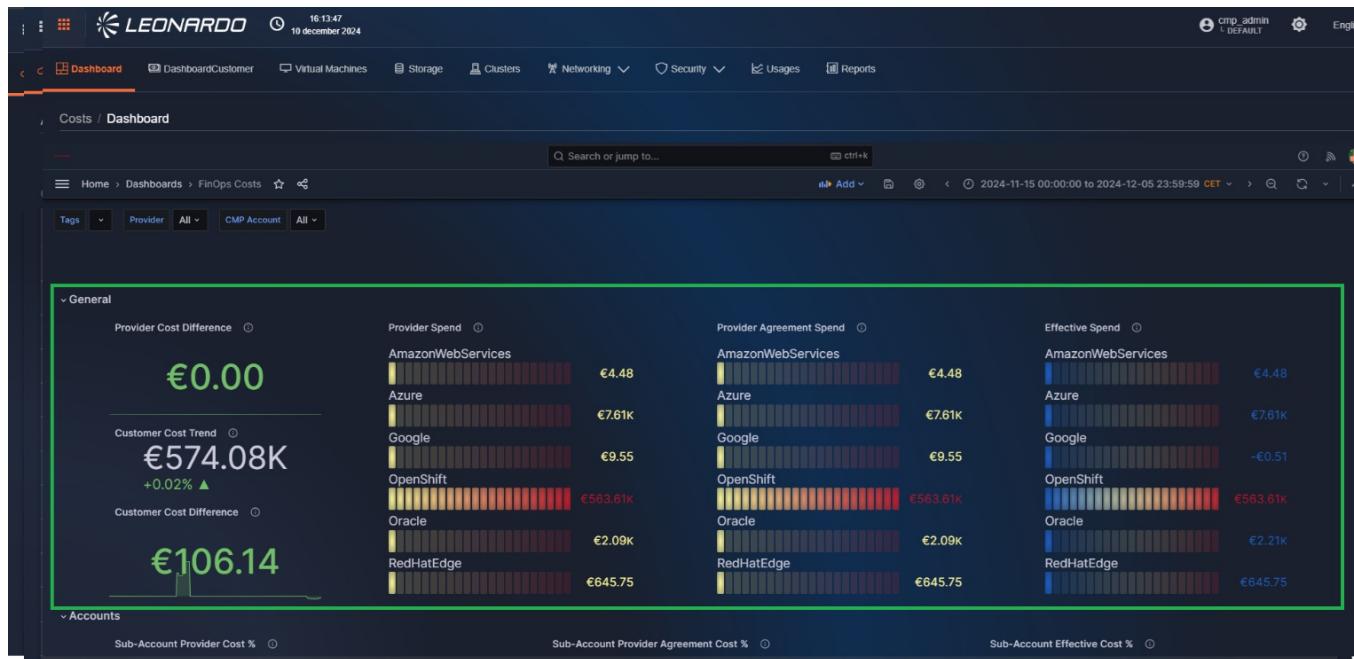

Figura 309 – General

"ACCOUNTS" SECTION

In the second section, charts focused on the costs generated by each subordinate account of each provider are shown to the user.

In detail:

- **Sub-Account Provider Cost %:** Percentage of the total provider cost, for each account.
Used to identify the most expensive accounts and analyze the distributed economic load.
- **Sub-Account Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each subordinate account.
Useful for checking which accounts benefit from more significant discounts.
- **Sub-Account Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each subordinate account.
Allows seeing which accounts generate more revenue.

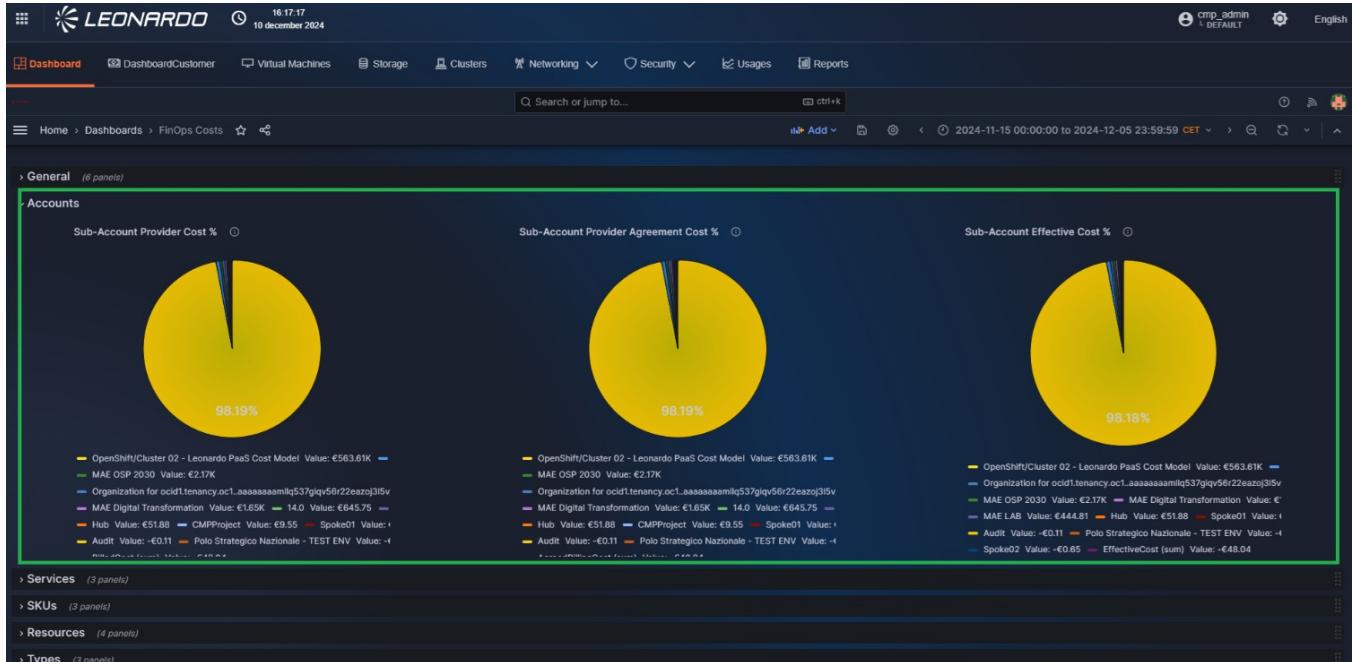

Figura 310 – Accounts

"SERVICES" SECTION

In the third section, charts focused on the costs generated by each cloud service of each provider are shown to the user.

In detail:

- **Service Provider Cost %:** Percentage of the total provider cost, for each service.
Allows understanding which services (e.g., compute, storage, network) have the most impact on costs.
- **Service Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each service.
Useful for analyzing the effectiveness of negotiations on various services.
- **Service Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each service.
Provides a clear view of the main revenue sources per service.

15 Dec 2025

09.00

Leonardo Cyber & Security Solutions

Secure Cloud Management Platform

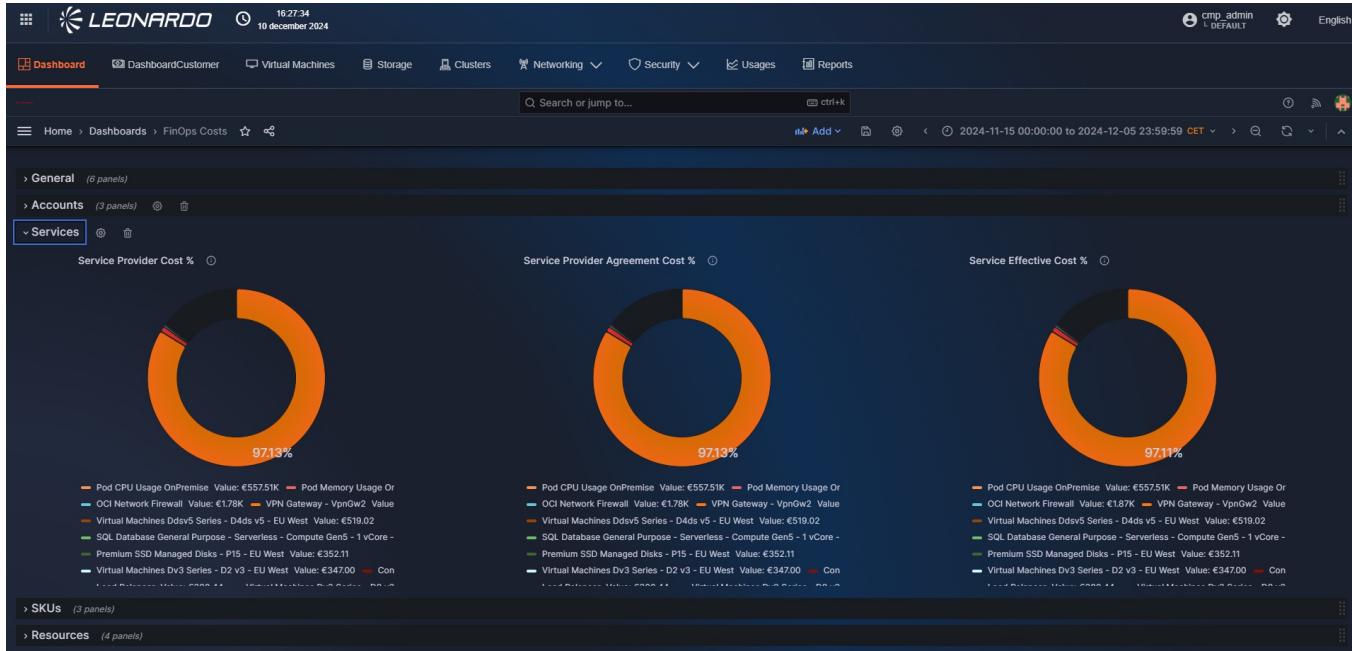

Figura 311 – Services

"SKUs" SECTION

In the fourth section, charts focused on the costs generated by each SKU of each provider are shown to the user.

In detail:

- Sku Provider Cost %:** Percentage of the total provider cost, for each SKU.
Allows detailed cost analysis at the billing unit level.
- Sku Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each SKU.
Useful for evaluating whether individual SKUs also benefit from discounts and optimizations.
- Sku Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each SKU.
Helps highlight any imbalances in margins at the SKU level.

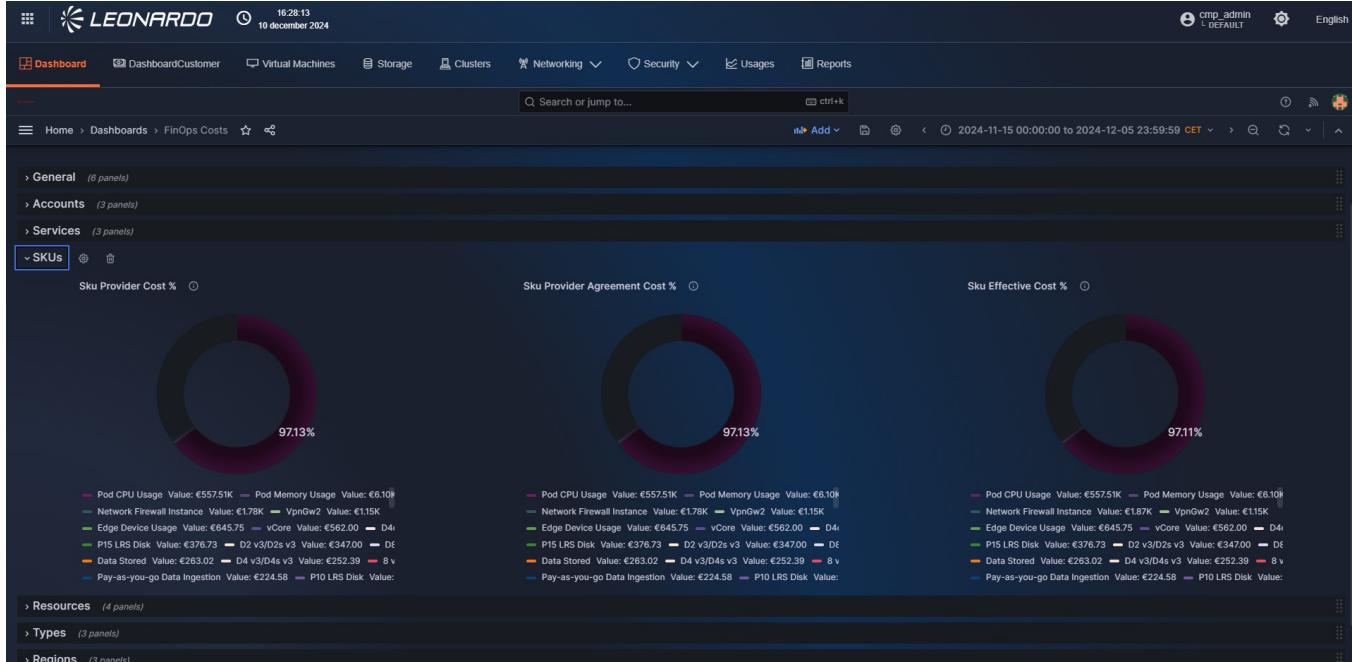

Figura 312 – Skus

"RESOURCES" SECTION

In the fifth section, charts focused on the costs generated by each resource of each provider are shown to the user.

In detail:

- **Resource Provider Cost %:** Percentage of the total provider cost, for each resource.
Allows the identification of particularly expensive or underutilized resources.
- **Resource Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each resource.
Allows seeing if discounts are distributed equally among resources.
- **Resource Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each resource.
Provides visibility into the profitability of individual resources.

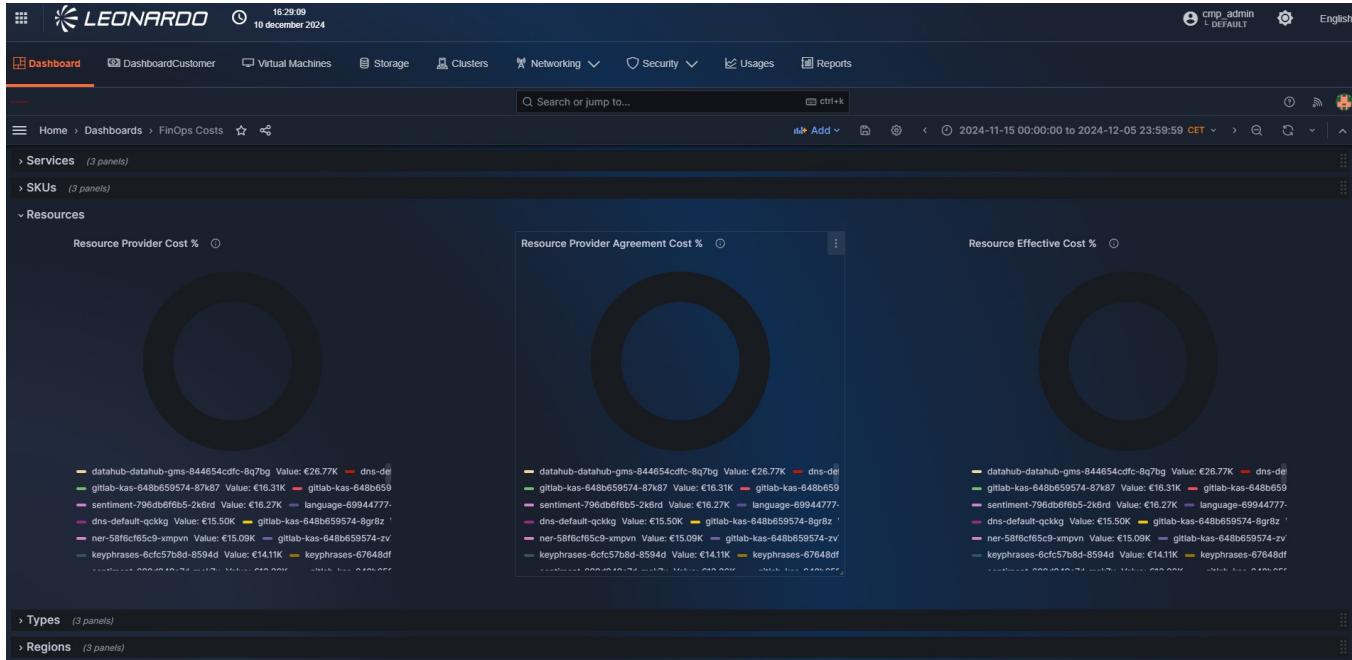

Figura 313 – Resources

"TYPES" SECTION

In the sixth section, charts focused on the costs generated by each inventory resource type of each provider are shown to the user.

In detail:

- **Resource Type Provider Cost %:** Percentage of the total provider cost, for each resource type.
Offers an aggregated view useful for cost planning.
- **Resource Type Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each resource type.
Helps understand which types are most optimized through agreements.
- **Resource Type Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each resource type.
Allows measuring the commercial weight of each category.

Leonardo Cyber & Security Solutions

09.00

Secure Cloud Management Platform

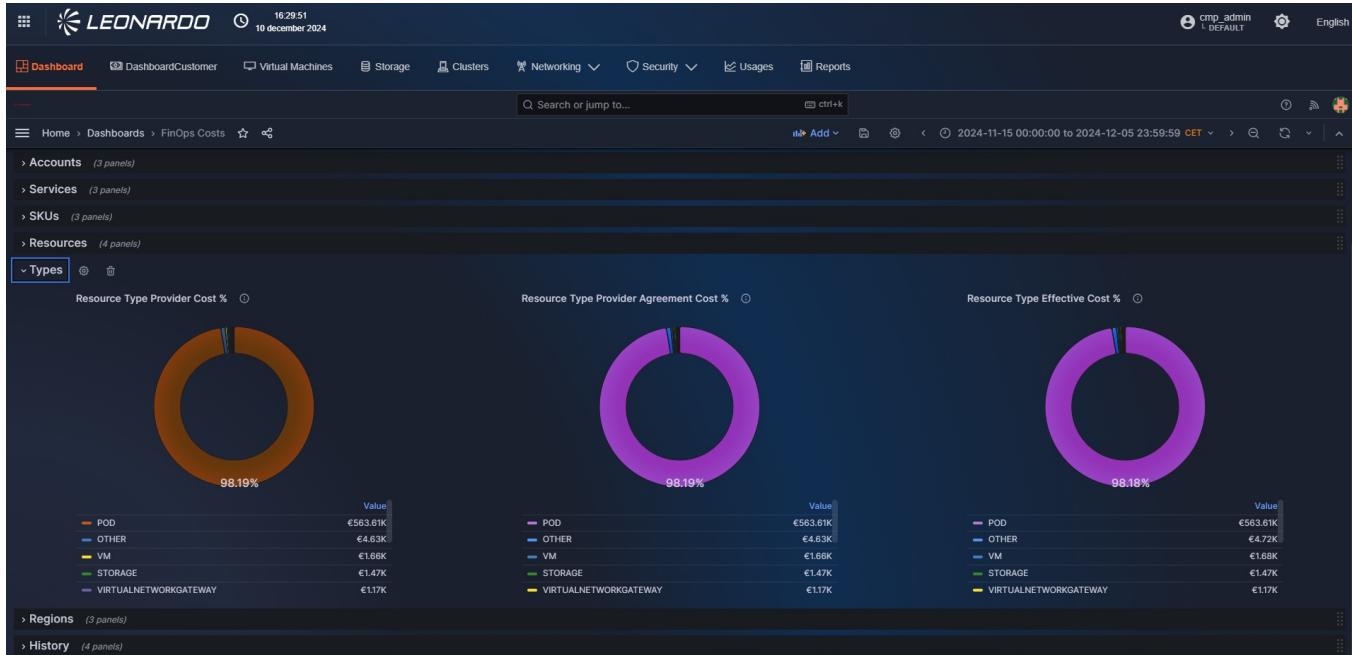

Figura 314 – Types

"REGIONS" SECTION

In the seventh section, charts focused on the costs generated in each region of each provider are shown to the user.

In detail:

- **Regional Provider Cost %:** Percentage of the total provider cost, for each region.
Indicates where resources are geographically located and their associated expenses.
- **Regional Provider Agreement Cost %:** Percentage of the total agreed provider cost, for each region.
Allows evaluating the convenience of chosen regions based on discounts.
- **Regional Effective Cost %:** Percentage of the total SCMP cost charged to the customer, for each region.
Useful for analyzing the distribution of revenue by geographical area.

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

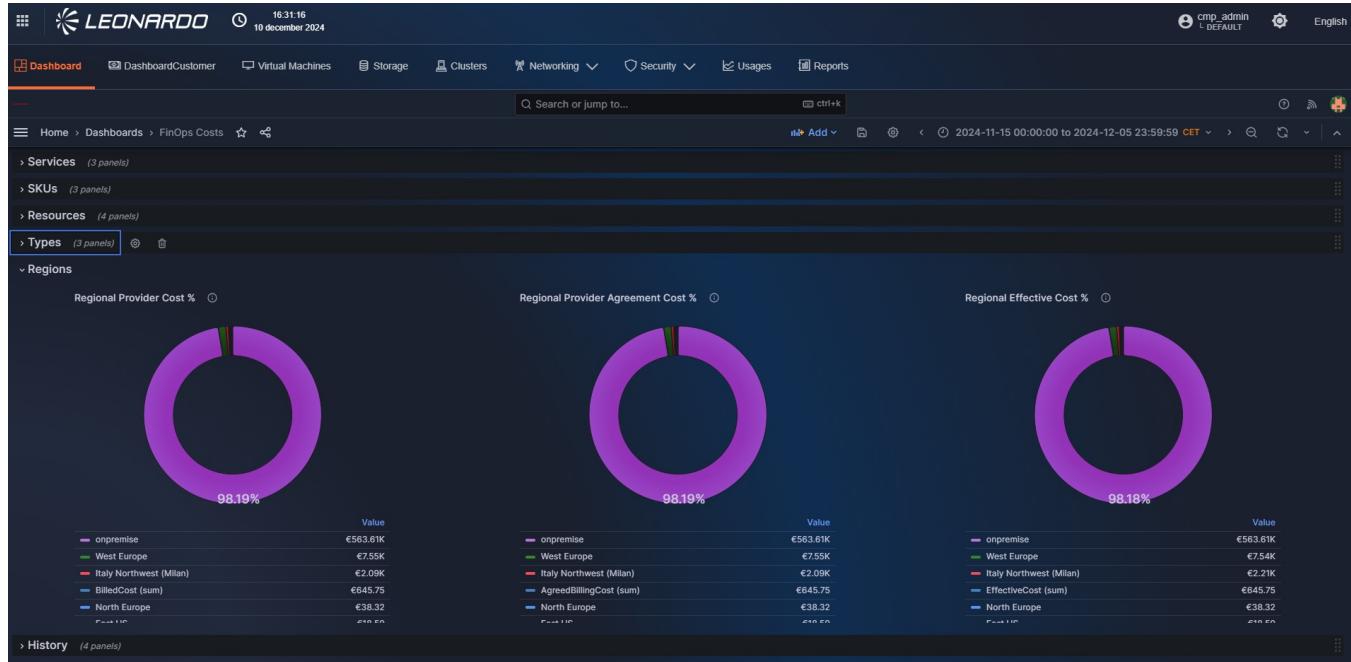

Figura 315 – Regions

"HISTORY" SECTION

Finally, in the eighth section, charts focused on the historical costs of each billing account, generated by each subsystem integrated into the SCMP, are shown to the user.

In detail:

- **System Costs Details:** Comparison between the total provider cost, the total agreed provider cost, and the total customer cost, for all subsystems integrated into the SCMP.
Fundamental for retrospective analysis and for evaluating the economic sustainability of the system.
- **Historical Provider Billing Costs:** History of the trend of total costs for each cloud billing account.
Helps predict future trends and anticipate spending or budget issues.

Figura 316 – History

Limited view for the customer

If a user configured with the "LIMITED" parameter is used to access the cost dashboard, the charts available on the dashboard will only relate to the recalculated SCMP costs, while the actual costs received from the providers will not be visible as they are superfluous, as can be seen in the image.

Figura 317 – Limited cost dashboard

"Usage" Dashboard

In addition to the main cost dashboard and its related detailed dashboards by resource type, in the SCMP Costs module, the user can view an additional dashboard, focused on the consumption of inventory resources integrated into the platform.

By navigating to the Usages section of the module, generic and detailed information on the consumption of individual integrated services/SKUs and their respective resources will be shown.

To access the functionality, above the breadcrumb path, click on the "Usages" tab.

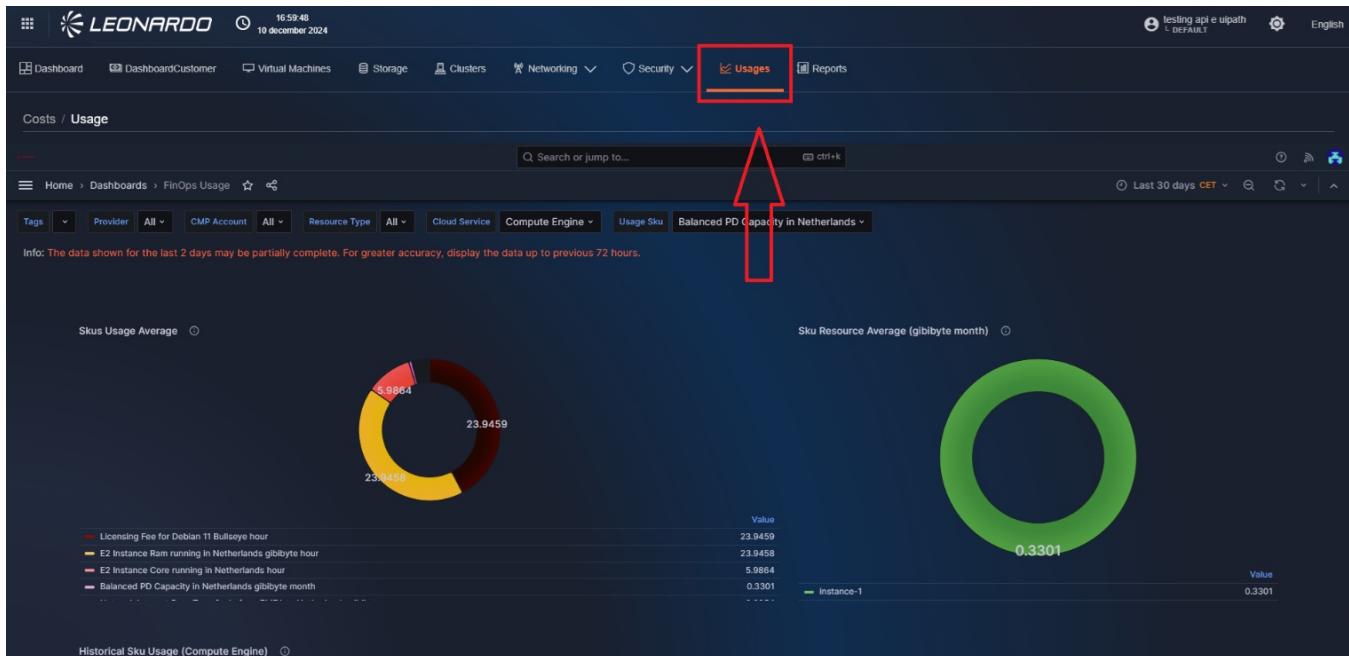

Figura 318 – Access to "Usages"

Usage section filters

Within the page, a series of filters are available that can be selected simultaneously to filter the dashboard results.

The main filter is the display period, which can be found in the upper right. Clicking on it will open a selection window (in yellow in the figure) where it will be possible to either enter a custom time range, using the "From" and "To" fields on the left, or select a "smart" time range by clicking directly on the desired choice in the scrollable section on the right.

Figura 320 – Cost functionality filters

Overview of the data shown in the costs section

"SKUS USAGE AVERAGE" SECTION

The first chart represents the daily average consumed by each SKU. It is a summary chart that shows the user the general trend of consumption.

For each SKU, in fact, the average consumption and the unit of measure are indicated, within the specified time range, to briefly show which of them are, on average, most used and consequently which of them could generate higher costs for the user.

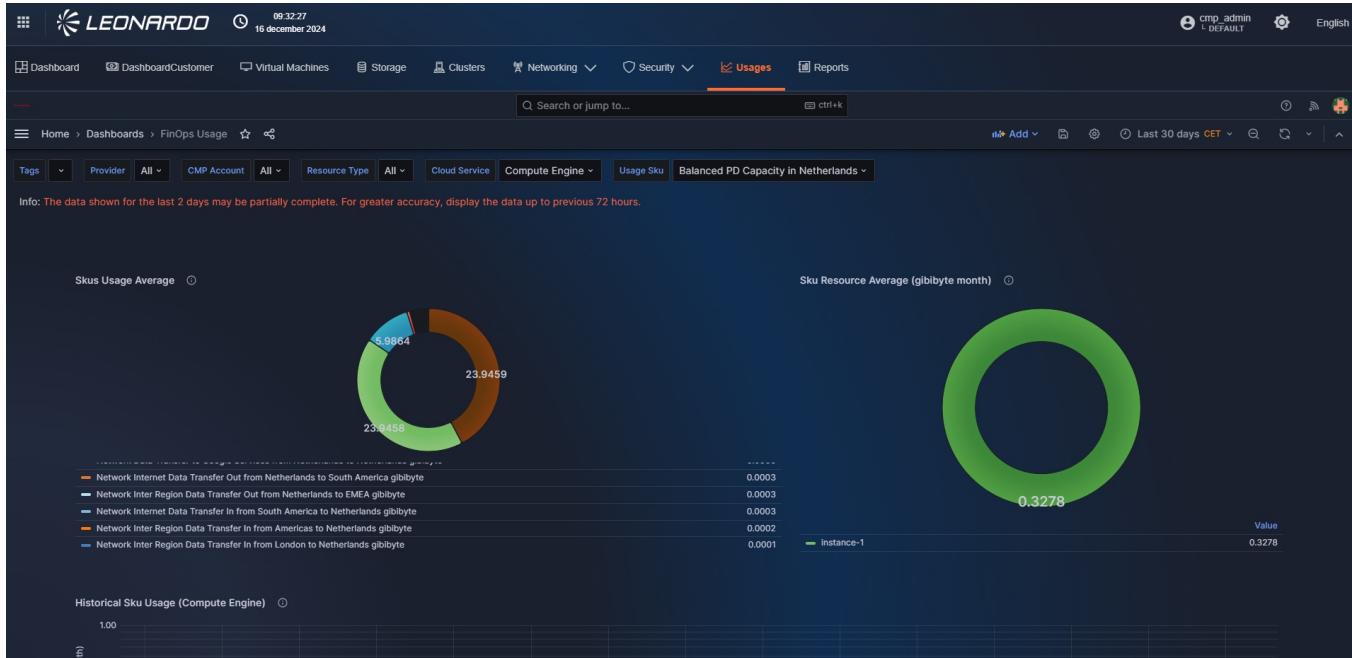

Figura 321 – "SKUs Usage" Section

"SKU RESOURCE AVERAGE" SECTION

The second chart, on the other hand, is focused on the SKU selected as a filter by the user and shows the daily average consumed by each resource, correlated to the specific SKU.

It too can be classified as a summary chart that provides the user with which resources for a given SKU are, on average, most used and consequently which of them could generate higher costs for the user.

15 Dec 2025

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is currently selected. Below the navigation, there's a breadcrumb trail: Inventory / Reports. The main area is titled 'Reports' and shows a table of existing reports. The table has columns for Sub Category, Provider, Creation Date, Status, and Actions. There are 12 rows listed, all marked as 'READY'. One row is highlighted with a blue background. At the bottom right of the table, there's a button labeled '+ New report'. A modal window titled 'New report' is overlaid on the table. It contains a sub-header 'Select a report type from the list:' and a list item 'Inventory Summary' with the description 'Report about the number of resources related to specific filters'. At the bottom of the modal are two buttons: 'Cancel' and 'Configure'.

Figura 326 – New report creation

Once the report type is selected, click on the “Configure” button to select the providers to include in the report. In the newly opened window, you will find the “Provider” field, which allows you to select one or more pre-existing providers in the system. Subsequently, it is possible to select one or more subsystems to include in the report; if no providers are selected, no subsystem can be selected. Finally, there is a “tag” section to include only resources that have the entered tag.

Secure Cloud Management Platform

The screenshot shows a dark-themed web interface for cloud management. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is currently selected. Below the navigation is a sub-menu for 'Inventory / Reports'. A modal window titled 'Reports' is open, showing configuration options for an 'Inventory' report. The provider is set to 'Azure, Google' and the subsystem is 'MAE LAB, CMPPROJECT-374610'. There are sections for Tags and Report Type (with 'One-Shot' selected). A 'Submit' button is at the bottom of the modal. In the background, a table lists various reports with columns for Sub Category, Provider, Status, and Actions. Most reports are listed as 'READY'.

Figura 327 – Report configuration

At this point, the user can choose between two different actions:

- Create a static report that will be saved in the system.
- Schedule a job that generates the report periodically.

To confirm the creation of a static report, verify that "One-Shot" has been selected for the "Report type" field and click the "Submit" button at the bottom.

After a loading period, the newly generated report will be visible in the list.

REPORT SCHEDULING

If, instead, you want to schedule automatic report execution, you will need to select “Recurring” for the “Report Type” field. In this case, the window updates to show additional parameters for configuring the periodic report.

The parameters to enter are:

- Period: allows selecting the report sending frequency (hourly, daily, ...).
 - "Receive only if not empty" if selected, the file will not be sent when no information is present inside
 - Report Language: allows selecting the language used in the report.
 - File format: allows selecting one or more file types to include in the email.
 - User E-mails: allows entering an email address to send reports to. After entering an email, it is necessary to press "Enter" on the keyboard to confirm its insertion. Once pressed, the newly entered email will move to the bottom box, and the field will be cleared to allow the insertion, if necessary, of a new email.

Figura 330 – List of generated reports

LIST OF SCHEDULED REPORTS

To view the list of scheduled reports, select the “Scheduled” tab located at the top left of the reports page.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with various links like Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is underlined in orange. Below the navigation, it says "Inventory / Reports". The main area is titled "Reports" with a subtitle "Scheduled". There are two tabs: "Ready" and "Scheduled", with "Scheduled" being the active one. Under "Scheduled", there are columns for Period (Hourly), Language (EN), Recipients (noame@gmail.com), and Last sent (12/06/2024 - 1:21 PM). On the right side, there's a "New report" button and a "Actions" column with a three-dot menu. At the bottom, there are pagination controls for items per page (20) and a total count of 1.

Figura 331 – List of scheduled reports

On this page, you will find the list and related information of the scheduled reports present in the system. For each result, by clicking the “Three dots” button on the right, three operations can be performed:

- View the last generated report.
- Edit the schedule settings; it will not be possible to modify the selected providers or subsystems.
- Delete the schedule to stop sending emails.

Figura 332 – Editing a schedule

REPORT USAGE

By clicking on the row of a static report, or using the "Show report" button available for scheduled reports, you will be able to view the detail page of the selected report.

Within the Inventory report summary, there is a "Stats" section which includes the number of disks, interfaces, networks, and virtual machines belonging to the selected provider.

Below the "Stats" section, there are the filters used by the user to generate the report.

Below the filters, there is a summary table of resources belonging to the providers. On the right, there are two buttons: "PRINT" and "EXPORT".

Clicking the "PRINT" button brings up a print preview modal. To print the report, click the "Stampa" (Print) button in the lower right; at this point, the printing of the aforementioned will start.

Clicking the "EXPORT" button allows exporting the report in ".csv", ".json" or ".pdf" format.

To return to the "Results" tab, click the "CLOSE" button in the lower right, or click the left-pointing arrow in the upper left, next to the report title.

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Resources, Virtual Machines, Data Stores, Networks, Clusters, Security, Others, What If, and Reports. The Reports link is underlined, indicating it's the active section. Below the navigation, a breadcrumb trail shows 'Inventory / Reports' and a specific report ID 'Report 6669a0d3aae316468b3c8b34'. The main content area is titled 'Report Inventory Summary' with a back arrow. It features a 'Stats' section with five boxes: VMs (1), Disks (1), Networks (1), Interfaces (0), and K8Ss (0). Below this, a table lists inventory details by provider and subsystem. The table has columns for Type Provider, Subsystem Name, VMs, Disks, Networks, Interfaces, and K8Ss. Two entries are shown: one for Azure (MAE LAB) with 14 VMs, 16 Disks, 14 Networks, 0 Interfaces, and 0 K8Ss; and one for Google (CMPPROJECT-374610) with 1 VM, 1 Disk, 1 Network, 0 Interfaces, and 0 K8Ss. At the bottom right of the table, there are buttons for 'PRINT' and 'EXPORT', and pagination controls showing 'Items per page: 20' and '1 – 2 of 2'.

| Type Provider | Subsystem Name | VMs | Disks | Networks | Interfaces | K8Ss |
|---------------|-------------------|-----|-------|----------|------------|------|
| Azure | MAE LAB | 14 | 16 | 14 | 0 | 0 |

NON CLASSIFICATO

11 Provisioning

Provisioning is one of the most important functionalities of SCMP. Through these modules, it is possible to allocate runtime assets within the providers managed by SCMP.

To use this functionality, relations must be defined within the SCMP.

This constraint was made available to bind certain characteristics to provisioning; for example, the VM size is not selectable during provisioning but is among the predefined characteristics by administrators within the catalog.

*Figura 334 – Access to "Provisioning"*

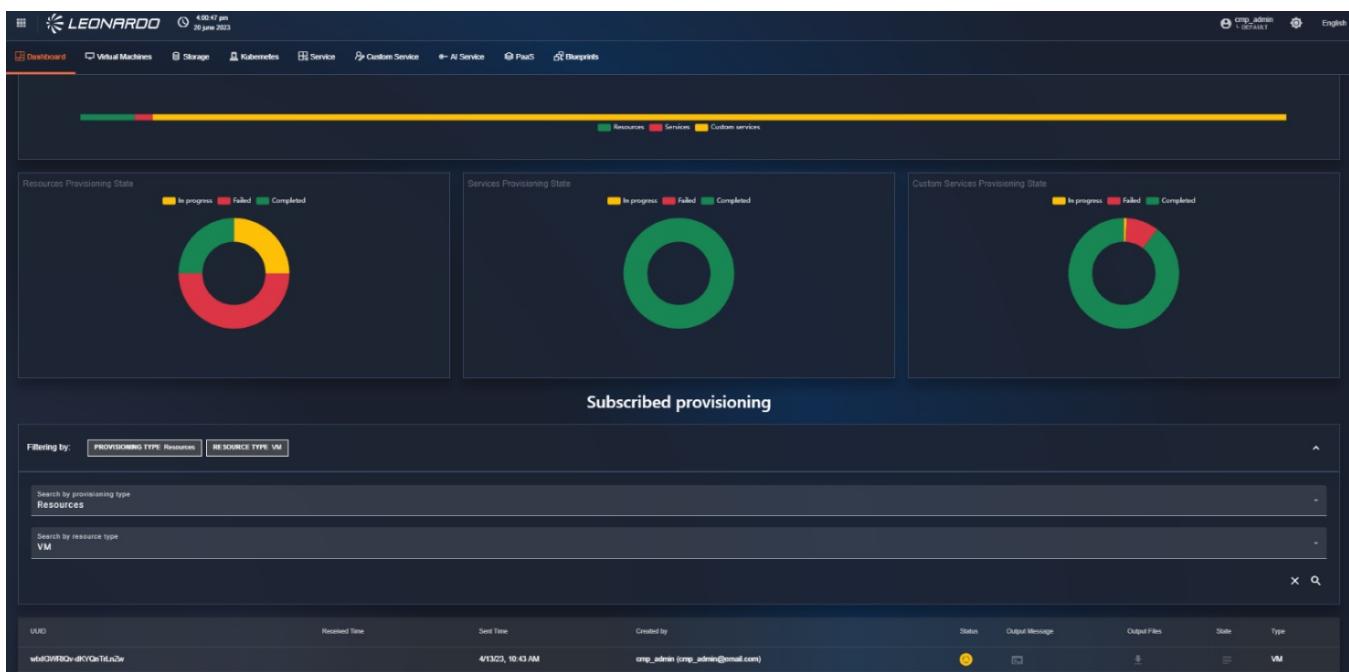

11.0.1 Dashboard

Accessing the functionality, the first available page is the Dashboard of provisionings carried out within the system.

The page presents a series of graphs, filters, and the list of provisionings performed.

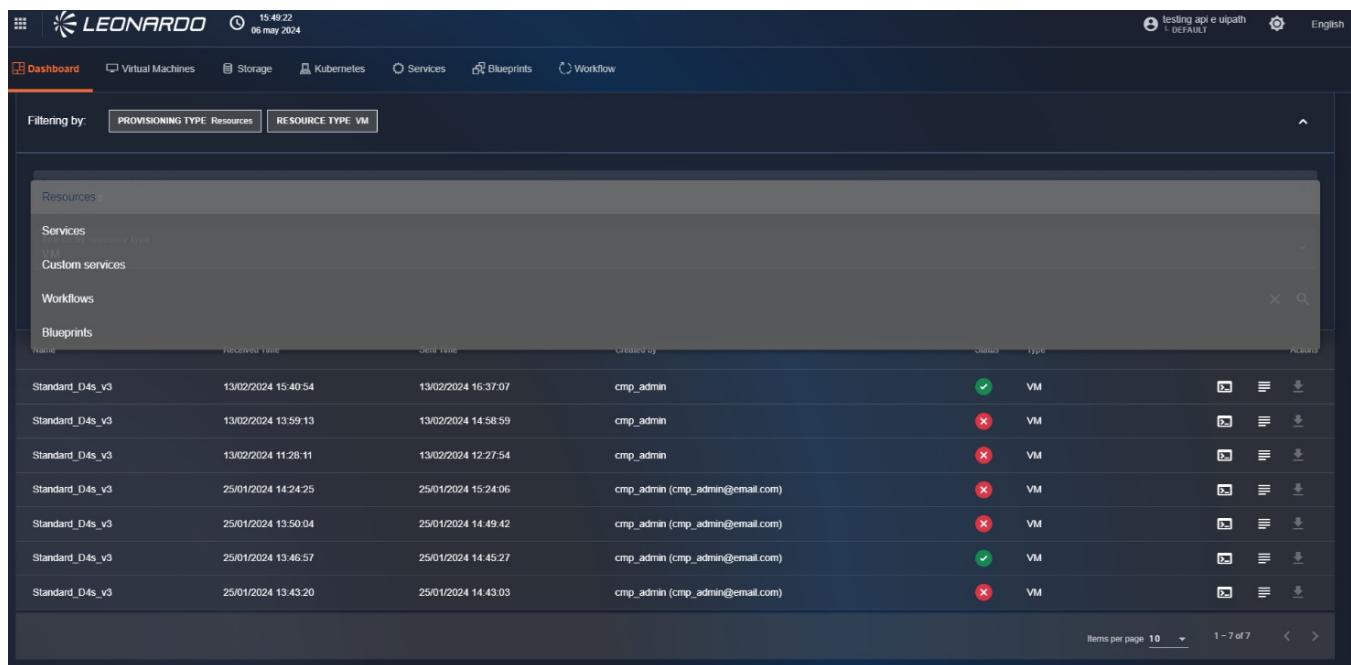

The graphs allow visualizing the information present in the table, grouped by:

- The total of all provisionings carried out, divided by type.
- The status of provisionings carried out, divided by outcome and category of the provisioned asset.

*Figura 335 – Provisioning page graphs*

At the bottom of the page, we can use the filters section to modify the results present in the table. The "Provisioning Type" filter is the main filter that allows selecting the type of asset to display, specifically:

- Selecting "Resources" adds a filter that allows selecting the type of resource for which you want to display the provisioning status. By default, the system shows the list of provisioned VMs.
- Selecting "Services" and "Custom services" has no additional filters, and the list is updated with only provisionings related to Services.
- Selecting "Blueprint" adds a filter that allows changing the flow (i.e., the type of blueprint to display), and the table is modified to show only flows not yet completed. Above the table, there is a control that allows changing tabs, to switch from "in progress" flows to "Completed" flows.

The screenshot shows a web-based management interface for cloud resources. At the top, there's a header bar with the Leonardo logo, the date (05 may 2024), and some status indicators. Below the header, a navigation bar includes links for Dashboard, Virtual Machines, Storage, Kubernetes, Services, Blueprints, and Workflow. A sub-navigation bar under 'Blueprints' shows 'Filtering by: PROVISIONING TYPE Resources' and 'RESOURCE TYPE VM'. The main content area is titled 'Resources' and contains sections for 'Services', 'Custom services', 'Workflows', and 'Blueprints'. A table lists provisioning details for several VMs, including their names, received time, creation date, creator, status, and type. The table includes columns for Name, Received Time, Date Created, Created by, Status, Type, and Actions. Most entries show a green checkmark in the Status column, indicating successful provisioning. The bottom right of the table area shows pagination controls for 'Items per page: 10' and '1 - 7 of 7'.

Figura 336 – Filter by asset type

11.0.2 Provisioning Table Specifications

11.0.2.1 "Resources", "Services", "Custom Services"

The list has the following attributes when "Resources", "Services", "Custom Services" is selected as a filter:

- Uuid, Provisioning identifier;
- Provisioning completion date;
- Provisioning request date;
- User who created the instance;
- Status;

- Output of provisioning systems;
- Detailed provisioning Json;
- Status information;
- Resource type.

Figura 337 – “Resources” Table

When in this view, the following operations can be performed:

- By clicking on the row of a failed provisioning, it is possible to modify and re-execute it.
- By clicking on the "Output Message" icon corresponding to a provisioning, it is possible to view the response received from the "Terraform" module.
- By clicking the "Download" button, it is possible to download the files returned by the functionality.
- By clicking the "State" button, it is possible to view the graph and the list of provisioned resources.

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows a table of provisioning records. Two rows are visible:

| UUID | Received Time | Sent Time | Created by | Status | Output Message | Output Files | State | Type |
|-----------------------|-------------------|-------------------|---------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|------|
| w1xGWRiQv-dKYQnTlLnZw | 4/13/23, 10:43 AM | | cmp_admin (cmp_admin@email.com) | ? | ? | ? | ? | VM |
| PtxhPXNN0m8nKq3H7lp-A | 3/10/23, 11:13 AM | 3/10/23, 11:13 AM | cmp_admin (cmp_admin@email.com) | ✓ | ✓ | ✓ | ✓ | VM |

A modal window for the second row displays Terraform execution details:

```

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

# vsphere_virtual_machine.VMWarePro2023 will be created
+ resource "vsphere_virtual_machine" "VMWarePro2023" {
    + annotation
        = (known after apply)
    + boot_retry_delay
        = 10000
    + change_version
        = (known after apply)
    + cpu_limit
        = -1
    + cpu_share_count
        = (known after apply)
    + cpu_share_level
        = "normal"
    + datastore_id
        = "datastore-3011"
    + default_ip_address
        = (known after apply)
}
  
```

Figura 338 – Terraform message visualization

The screenshot shows a table of provisioning records. Two rows are visible:

| UUID | Received Time | Sent Time | Created by | Status | Output Message | Output Files | State | Type |
|-----------------------|-------------------|-------------------|---------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|------|
| w1xGWRiQv-dKYQnTlLnZw | 4/13/23, 10:43 AM | | cmp_admin (cmp_admin@email.com) | ? | ? | ? | ? | VM |
| PtxhPXNN0m8nKq3H7lp-A | 3/10/23, 11:13 AM | 3/10/23, 11:13 AM | cmp_admin (cmp_admin@email.com) | ✓ | ✓ | ✓ | ✓ | VM |

A modal window for the second row displays a resource graph visualization:

Lineage : eb522424-d4af-d79e-69a5-a23a050cadff

Resources 0, Resources 1, Resources 2, Resources 3

Serial : 1
Terraform Version : 1.1.9
Version : 4

Legend: Provisioning (green), Other (orange), Storage (yellow), Network (red), VM (blue).

The graph shows a central node labeled "Provisioning" connected to several other nodes: "VMWarePro2023" (blue), "datastore" (yellow), "network" (red), and "datacenter" (orange). Arrows indicate dependencies from "VMWarePro2023" to "datastore" and "datacenter", and from "datastore" to "network".

11.0.2.3 Blueprint

The list has the following attributes when "Blueprint" is selected as a filter:

- Blueprint Name
- Creation Date
- User who provisioned the blueprint

Above the table, we can notice two tabs. By clicking on them, the table is filtered respectively for Blueprints to be completed and Completed Blueprints (in red in the image).

Leonardo Cyber & Security Solutions

15 Dec 2025

09.00

Secure Cloud Management Platform

The screenshot shows a web interface for managing cloud resources. At the top, there's a navigation bar with tabs for Dashboard, Virtual Machines, Storage, Kubernetes, Services, Blueprints (which is currently selected), and Workflow. The main title is "Subscribed provisioning". Below the title, there's a filtering section with a dropdown set to "Blueprints". The main area has two tabs: "To be completed" (highlighted with a red arrow) and "Completed/Failed" (highlighted with a red box). Under "To be completed", there's a table with three rows:

| Name | Creation date | Created by |
|--------------------------------|---------------------|------------|
| Docker development environment | 18/03/2024 09:46:30 | cmp_admin |
| Docker development environment | 14/03/2024 09:29:13 | cmp_admin |

Under "Completed/Failed", there's a single row:

| Name | Creation date | Created by |
|-------------|---------------------|------------|
| Only manual | 14/03/2024 09:12:56 | cmp_admin |

*Figura 342 – “Provisioning blueprint”
table tabs*

In this view, it is possible to click on a table row to view the blueprint details.

When the selected blueprint is "to be completed," we will be redirected to the blueprint provisioning page where we can perform the necessary operations for completion.

Secure Cloud Management Platform

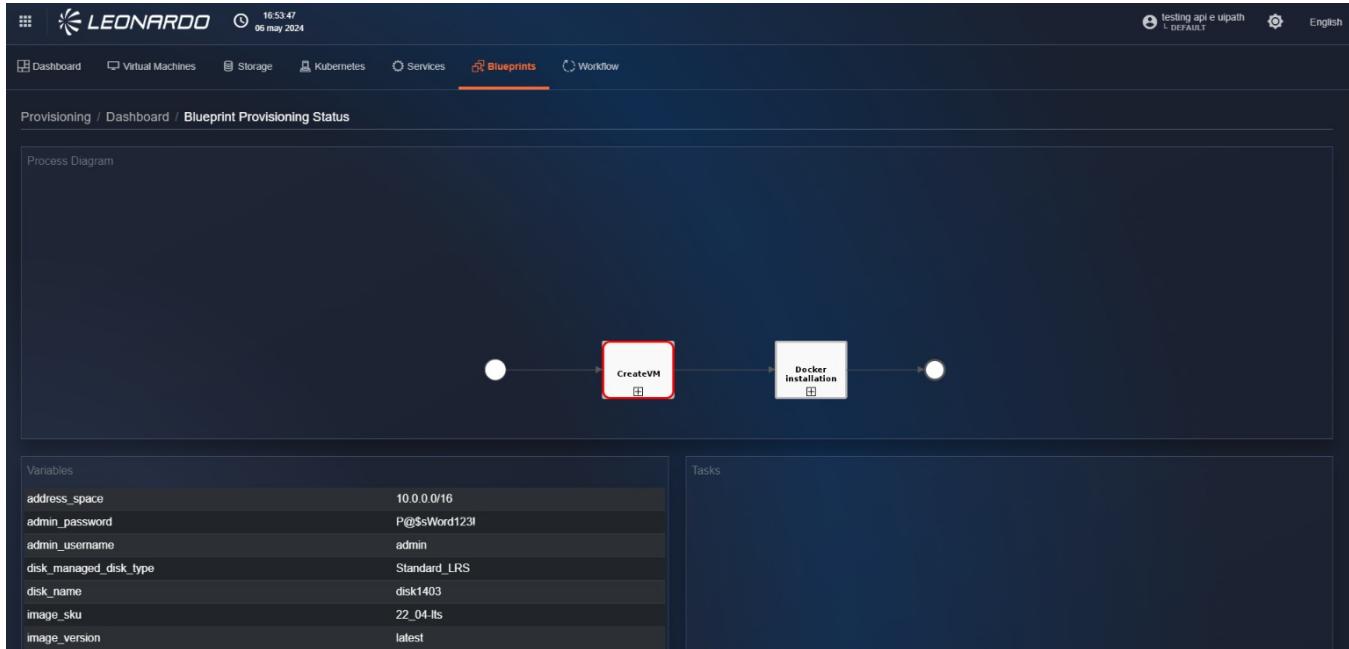

Figura 343 – “To be completed” flow visualization

If a completed blueprint is selected instead, we will be redirected to the blueprint provisioning details page where the prediction "flow" will not be displayed because it has already been completed.

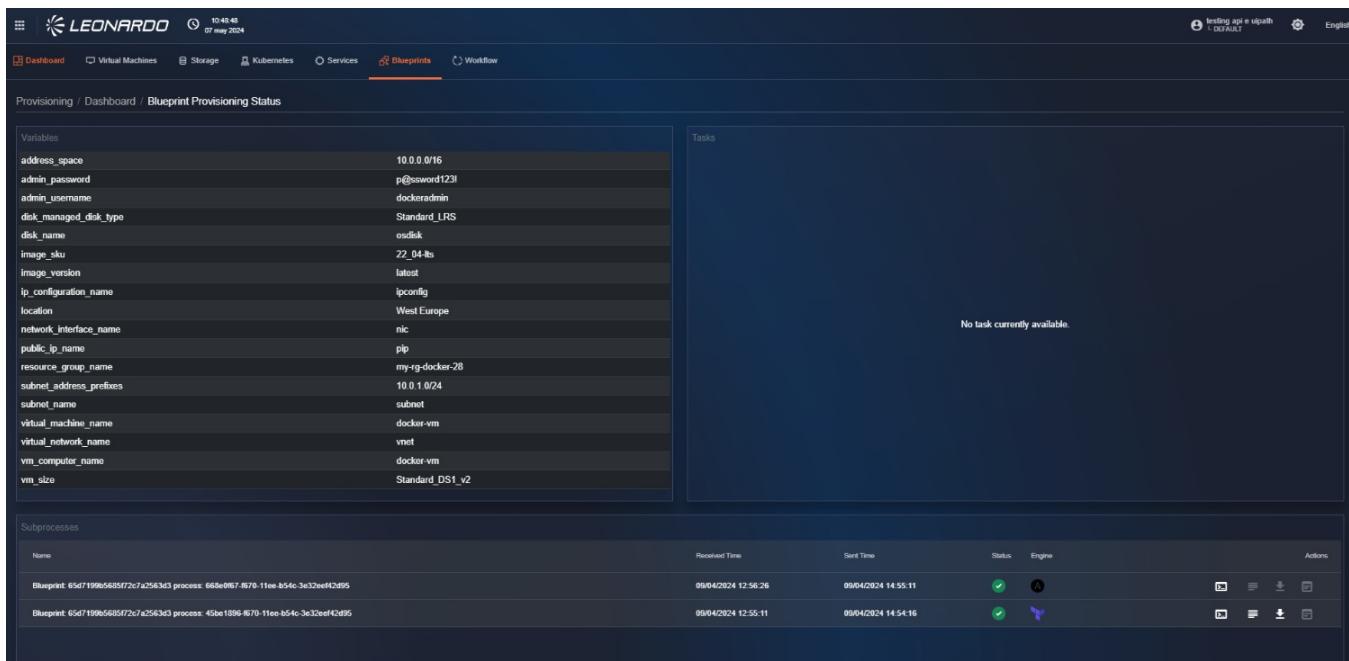

Figura 344 – “Completed” flow visualization

11.0.3 Creation of Provisionings

11.0.3.1 Provisioning of "Physical Resources"

Using the tabs in the provisioning functionality, it is possible to view the lists of provisionable resources within the SCMP, such as Virtual Machines, Storage, and Kubernetes.

To view elements within the result lists, it is necessary that a relation exists in the SCMP catalog with the catalog resource of the provider to be provisioned.

The functionalities available for these elements are identical; only the parameters to be entered in the creation steps change.

The screenshot shows a dark-themed web interface for the Leonardo Secure Cloud Management Platform. At the top, there's a header with the Leonardo logo, the date and time (4:56:45 pm, 21 June 2023), and user information (cmp_admin, L DEFAULT, English). Below the header is a navigation bar with several tabs: Dashboard, Virtual Machines (which is highlighted with a red box), Storage, Kubernetes, Service, Custom Service, AI Service, PaaS, and Blueprints. The main content area is titled 'Provisioning / Virtual Machines'. It contains a table with columns for UUID, Type, Provider, Size, and Creation Date. There are three entries listed:

| UUID | Type | Provider | Size | Creation Date |
|--|------|----------|-----------------------------|---------------|

At the bottom right of the table, there are pagination controls: 'Items per page' set to 10, and page indicators showing '1 - 3 of 3'.

Figura 345 – Tabs for resource creation

11.0.3.1.1 VIRTUAL MACHINES

To start provisioning a resource, click on the corresponding row to view the page containing step 1 of provisioning creation. In this step, it is necessary to select, using the dropdown on the left, the "target" subsystem where the resources are to be provisioned. Once selected, an information mirror will be displayed on the right indicating the characteristics of the resource that will be provisioned. To continue, click the "Next" button at the bottom right to go to step 2 "Config" page.

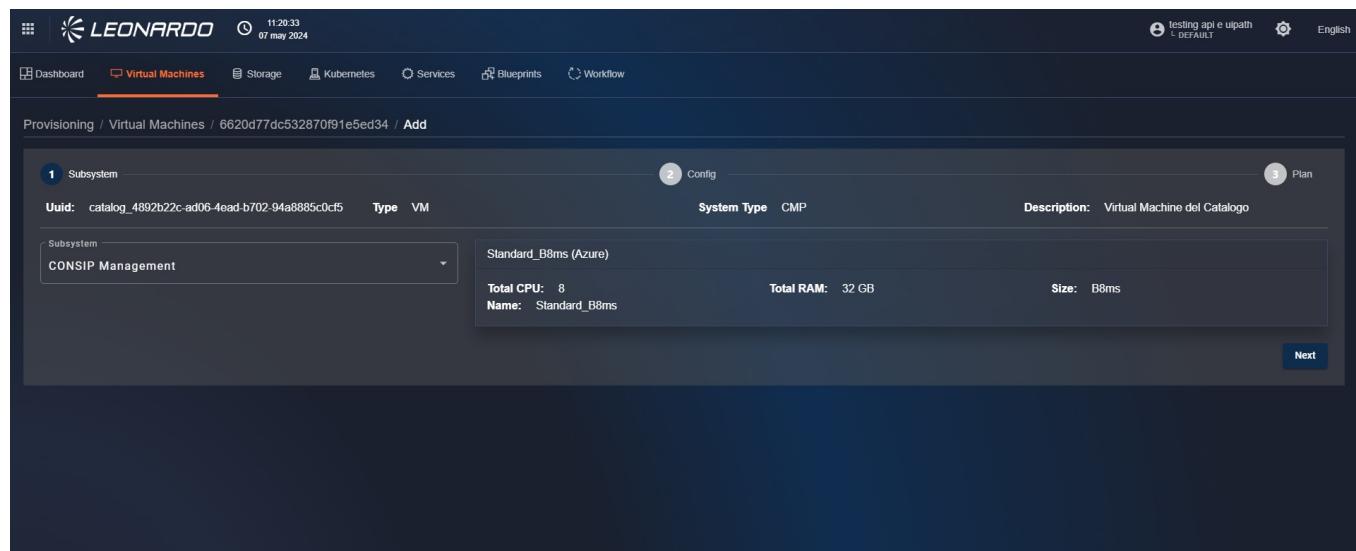

Figura 346 – Selection of the “target” subsystem, provisioning step 1

On the "Config" page of step 2, fill in all mandatory fields in all sections of the form. At the bottom left, click the "Reset" button to reset all fields on the page.

Instead, on the right, click the "Submit" button to go to step 3 "Plan".

Secure Cloud Management Platform

The screenshot shows a configuration interface for creating a new virtual machine. The top navigation bar includes the Leonardo logo, user information (12:48:40 pm, 07 December 2022), and language settings (English). The main section is titled 'new virtual machine' under 'Configuration Options'. It contains fields for 'Virtual Machine Name *', 'Resource Group *', 'Storage Type (Disk for OS) *', 'Storage Size (Disk for OS) GB' (set to 10), 'Image *', and checkboxes for 'Assign Public Ip' and 'Create new network'. Below this, there's a 'Network' section with dropdowns for 'Network' and 'Subnet', and a checkbox for 'Add storage'. At the bottom are 'Reset' and 'Submit' buttons.

This screenshot shows a configuration interface for setting up user access. It features fields for 'User name for access' and 'Password *'. There is also a 'Tags' input field. At the bottom are 'Reset' and 'Submit' buttons.

Figura 347 – Filling in the resource prediction form fields

After clicking the "Submit" button, the user is redirected to the "Plan" page of step 3 where we can view the provisioning plan sent by Terraform, which indicates all the parameters of the resources that will be configured, and at the bottom, there is a list with a cost perspective.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a header with the Leonardo logo, the date (29 October 2022), and time (5:57:25 pm). On the right, it shows the user 'cmp_admin' and the language 'English'. Below the header, the main content area has a title 'Subsystem' and a 'Config' button. A large text box displays the Terraform execution plan, which includes resource creation details like 'azurerm_linux_virtual_machine.vmtest'. Below this, a 'Costs' section provides a table of consumption and reservation details:

| Type | Amount | Unit | OS | Zone | Reservation Term | Description | Meter ID | Tier Minimum Units |
|-------------|--------|---------|-------|------|------------------|-------------|----------|--------------------|
| CONSUMPTION | €0.15 | 1 Hour | LINUX | - | - | - | - | - |
| RESERVATION | €0.06 | 3 Years | LINUX | - | 3 Years | - | - | - |
| RESERVATION | €0.09 | 1 Year | LINUX | - | 1 Year | - | - | - |

At the bottom right of the main content area, there are three buttons: 'Back', 'Reset', and 'Apply'.

Figura 348 – Forecast screen

Still from the "Plan" page of step 3, at the bottom right, there are three buttons: "Back", "Reset", and "Apply". If you click the "Back" button, the user returns to the "Config" page of step 2 where parameters can be modified.

If you click the "Reset" button, the user is redirected to the "Subscription" page of step 1 where it is necessary to select a subsystem, and then enter the parameters on the "Config" page of step 2.

Finally, if you click the "Apply" button, the forecast is saved, and the user is redirected to the "Dashboard" tab page where the user verifies the presence of the newly created forecast.

11.0.3.2 Provisioning of "Services"

To access the services page, click on the tab that depicts a shelf located in the top menu. After doing this, you will find yourself on the "Service" page.

The screenshot shows the SCMP interface with the 'Services' tab selected. The page displays a grid of service cards, each representing a different provisioned service. The cards include:

- PaaS - Nginx: Web, Leonardo PaaS. Nginx platform as a service.
- Audio Analytics: AI & Machine Learning, Analytics. Describes audio analysis using neural network-based signal processing.
- Azure Resource Group: Cloud Provider. Creates a new Resource Group through Terraform.
- Redis DB: Database. Describes Redis as an open-source data structure server.
- Text Analytics / NLP: AI & Machine Learning. Describes AI algorithms using neural networks to understand natural language text.
- Subscription Alias Full Parameters PSN: Cloud Provider. Describes a subscription alias for PSN.
- Echo String: Streaming & Messaging. Echoes a string to a tmp file.
- Kafka: Streaming & Messaging. Describes Kafka as a distributed system for servers and clients.

Each card includes a "Subscribe" button. A yellow arrow highlights the "Subscribe" button on the "Text Analytics / NLP" card, indicating the action being performed.

Figura 350 – List of cards

On the page, a list of components called "Card" is displayed. Each card refers to a specific type of service; in particular, the following information is displayed:

- Service name;
- Service icon;
- Type of script used for service provisioning;
- Service description;
- "Subscribe" button to proceed with service creation.

Depending on the type of service selected, the steps for provisioning change; these will be analyzed in detail below.

11.0.3.2.1 "STANDARD" SERVICES

Click the "Subscribe" button corresponding to a "standard" service. The user will be redirected to step 1 of the service creation page, and all instantiable versions of the service by SCMP will be displayed. In particular, various blocks will be shown, each with a list of configurations:

- Name and version of the service that will be instantiated.
- Name and version of the operating system that will be installed on the machine.
- Belonging provider on which the service will be provisioned.

Leonardo Cyber & Security Solutions

09.00

Secure Cloud Management Platform

The screenshot shows the 'Service' tab selected in the navigation bar. Under 'Provisioning / Service / Subscribe service', it displays a configuration step for Kafka. The first tab, 'Configuration', is active. It lists two available options for Redis DB 7.0:

- Redis DB 7.0 (redis) [redis] OS: ubuntu-20_04-lts | Version: 3.2.1 | Available on: Azure Redis version 7.0 on Ubuntu 20.04 LTS
- Redis DB 7.0 (redis) [redis] OS: ubuntu-22_04-lts | Version: 3.2.1 | Available on: Azure Redis version 7.0 on Ubuntu 22.04 LTS

The 'Option selected' dropdown is set to '(None)'. A 'Continue' button is visible at the bottom right.

Figura 351 – Provisioning of a "standard" service

Select a software version and press the "Continue" button; the user is redirected to step 2 of service provisioning.

In step 2, it will be necessary to select a subsystem and fill out the form with the details of the chosen subsystem.

The screenshot shows the 'Service' tab selected in the navigation bar. Under 'Provisioning / Service / Configuration Options', it displays a form for configuring a Kafka instance. The fields include:

- Account Name *
- Resource Group *
- Location *
- Failover Location *
- Database Name *
- Throughput (RU/s)
400
- Tags

At the bottom are 'Reset' and 'Submit' buttons.

Figura 352 – Configuration of a

"standard" service

After completing all the form fields, click "Submit".

A request will be sent to the Terraform service, which will validate the activation configuration of the indicated flow and return the result.

The screenshot shows the 'Service' tab selected in the navigation bar. Under 'Provisioning / Service / Subscribe service', it displays a 'Configuration' summary. The summary includes:

- Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
 - + create
- Terraform will perform the following actions:

```
# azurerm_cosmosdb_account.account-name will be created
+ resource "azurerm_cosmosdb_account" "account-name" {
    + access_key_metadata_writes_enabled = true
    + analytical_storage_enabled       = false
    + connection_strings              = (sensitive value)
    + create_mode                      = (known after apply)
```

At the bottom right are 'Back' and 'Apply' buttons.

Figura 353 – Service configuration
summary

Click "Apply" to validate the flow and activate the service subscription.

The dashboard page will open with the list of all subscribed services and their relative statuses. Specifically, the newly provisioned service will have a "Running" status in yellow, and subsequently, depending on the result, the status will also be updated to "Completed" in green or "Error" in red.

The screenshot shows a dark-themed dashboard with the Leonardo logo at the top. The top navigation bar includes links for Dashboard, Virtual Machines, Storage, Kubernetes, Service, Custom Service, AI Service, PaaS, and Blueprints. On the left, there's a sidebar with a 'Filtering by' dropdown set to 'PROVISIONING TYPE Services'. Below it is a search bar with the placeholder 'Search by provisioning type Services'. The main area displays a table of service subscriptions:

| UUID | Received Time | Sent Time | Created by | Status | Output Message | Output Files | State | Type |

Figura 367 – Dashboard with the list of all subscribed services and their relative

statuses

11.0.3.3 Provisioning of "Edge" device images

To access the "Edge" provisioning page, click on the tab of the same name in the top menu.

After doing this, we will be taken to the "Edge" page of the provisioning module.

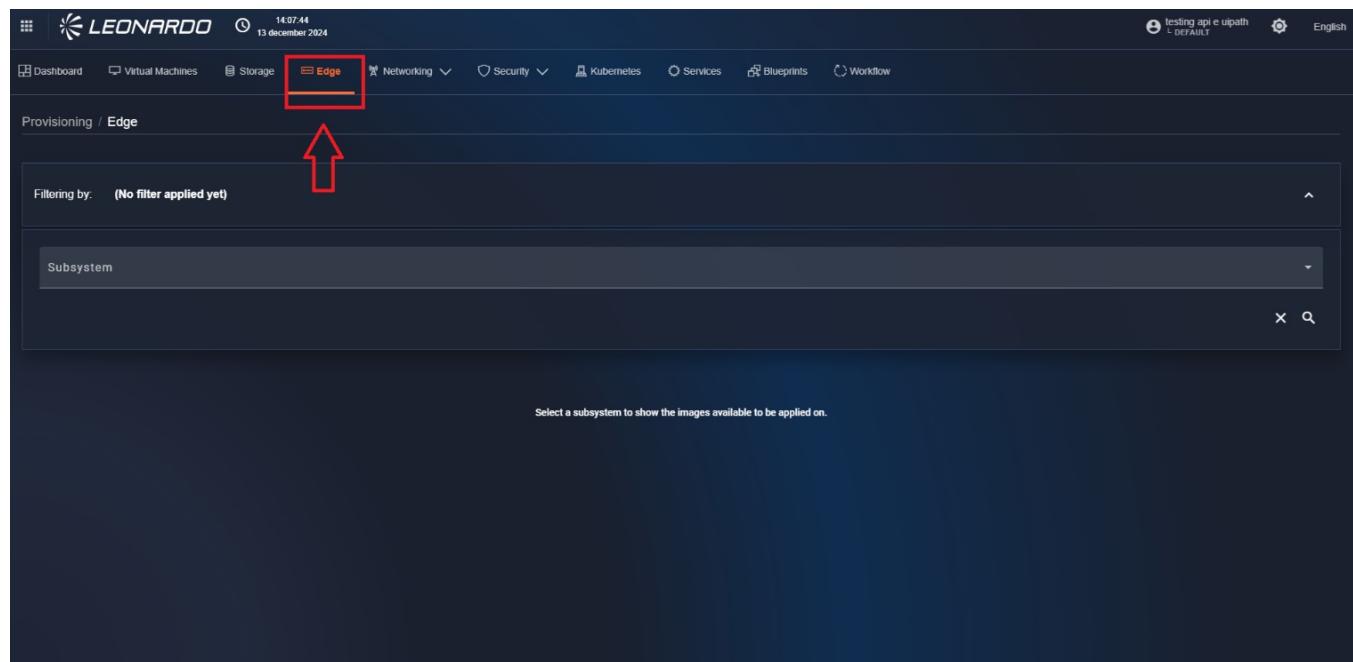

Figura 368 – Access to Edge provisioning

At first glance, the page may appear empty, but by selecting a configured EDGE subsystem from the "Subsystem" filter, all available images in the subsystem will be displayed below.

Figura 369 – Images available in the system

By selecting one of the available images, a section will open on the right that allows selecting a compatible inventory machine from the list.

After selecting a machine, we can confirm the operation using the "Apply" button.

We will be returned to the "dashboard" section of the "Provisioning" module where we can view the outcome of the operations.

The screenshot shows the Leonardo Secure Cloud Management Platform's Edge provisioning interface. At the top, there's a navigation bar with tabs for Dashboard, Virtual Machines, Storage, Edge (which is highlighted in orange), Networking, Security, Kubernetes, Services, Blueprints, and Workflow. Below the navigation bar, the page title is "Provisioning / Edge". A filtering bar shows "Filtering by: SUBSYSTEM EdgeRHEL". A dropdown menu under "Subsystem" is set to "EdgeRHEL". The main area is titled "Available Images" and lists several image names: rhel/9/x86_64/edge-pensaEdgeTest01_v2, rhel/9/x86_64/edge-pensaEdgeTest01_v20, rhel/9/x86_64/edge-pensaEdgeTest01_v21, rhel/9/x86_64/edge-pensaEdgeTest01_v3, rhel/9/x86_64/edge-pensaEdgeTest01_v7, rhel/9/x86_64/edge-pensaEdgeTest01_v8, and rhel/9/x86_64/edge-pensaEdgeTest01_v9. To the right of the image list, there's a section titled "Select one or more devices to apply the image to:" with a dropdown menu showing "Device rheledge01". A large red "Apply" button is at the bottom right of this section.

Figura 370 – Confirmation of "Edge" provisioning

11.0.3.4 Creation of a "Blueprint" provisioning request

To access the services page, click on the "blueprint" tab in the top menu. After doing this, you will find yourself on the "Blueprints" page.

On the page, a list of components called "Card" is displayed. Each card refers to a specific type of service; in particular, the following information is displayed:

- Service name.
- Service icon.
- Type of script used for service provisioning.
- Service description.
- "Subscribe" button to proceed with service creation.

Depending on the blueprint selected, the parameters for provisioning change, while the functionalities remain unchanged.

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with tabs for Dashboard, Virtual Machines, Storage, Kubernetes, Services (which is highlighted with an orange box), Blueprints (which is the active tab, indicated by a yellow arrow), and Workflow. Below the navigation, a sub-menu titled 'Provisioning / Services' is shown. On the left, there's a sidebar with a 'Categories' tree and a 'Filter by text' input. The main area displays a grid of blueprints. One blueprint, 'Text Analytics / NLP', has a yellow arrow pointing to its 'Subscribe' button. Other visible blueprints include PaaS - Nginx, Audio Analytics, Azure Resource Group, Redis DB, Subscription Alias Full Parameters PSN, Echo String, and Kafka.

Figura 371 – List of blueprints

11.0.3.4.1 "BLUEPRINT" EXECUTION REQUEST

Click the "Subscribe" button corresponding to a "Blueprint". The user will be redirected to step 1 of the creation page. In this step, it is necessary to select the subsystem in which provisioning is to be performed from the dropdown.

The screenshot shows the 'Subscribe Blueprint' step of the execution request. The 'Blueprints' tab is active in the navigation bar. A modal window titled 'Select a subsystem' is open, prompting the user to choose a subsystem. The dropdown menu shows 'Subsystem * OpenShift Default'. Below the dropdown, three numbered steps are listed: 1. Select a subsystem, 2. Fill out your parameters, and 3. Start provisioning.

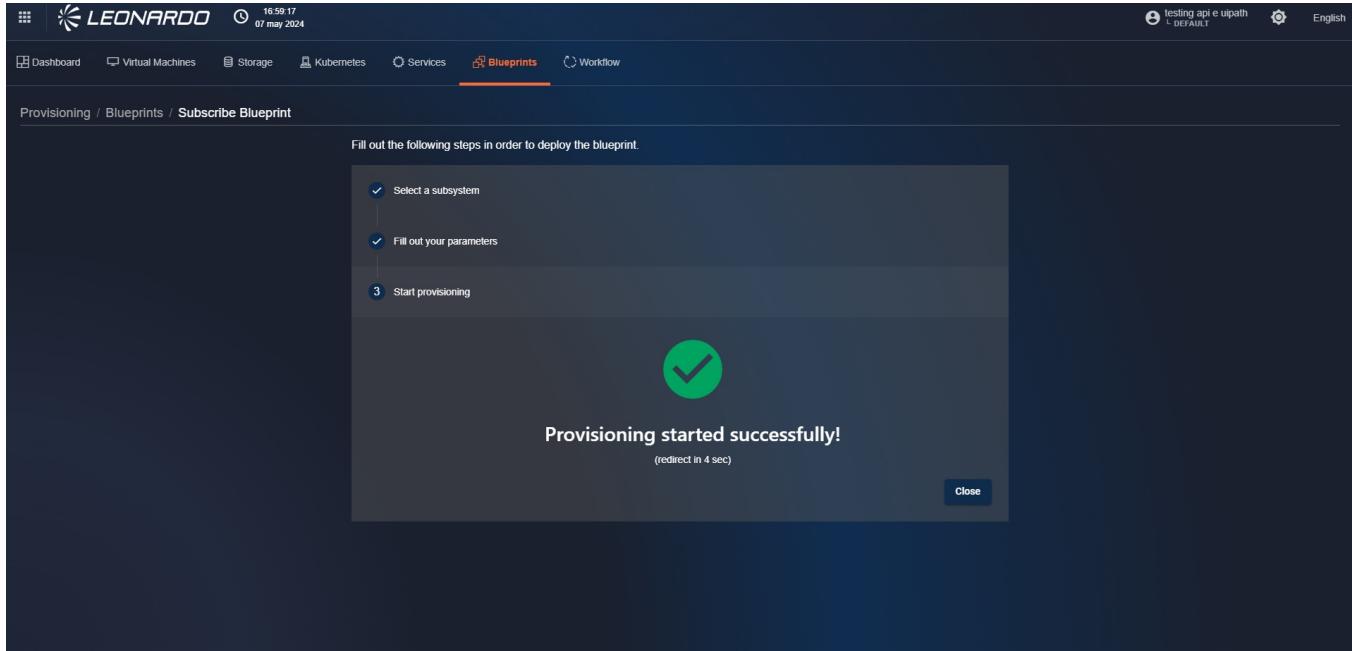

Figura 372 – Step 1 of Blueprint creation

By selecting a subsystem, the page will move to step 2 of creation where it will be necessary to fill out the form with the specific configuration parameters of the selected blueprint.

Figura 373 – Step 2 of "Blueprint" creation

Once the parameters have been entered, you can click the "Start" button at the bottom right to initiate provisioning. After a few seconds, you will be redirected to the "Dashboard" page, filtered for "Blueprints to be completed".

*Figura 374 – Blueprint Request sent
successfully*

11.0.3.4.2 "TO BE COMPLETED" BLUEPRINT MANAGEMENT PAGE

To work on the blueprint, it is necessary to select a "to be completed" blueprint from the dashboard. Clicking on the corresponding row will display its management page.

This page is divided into sections, specifically:

- "Process Diagram": This section displays an image that graphically represents all the steps to be executed in the blueprint. Additionally, the step currently in execution is indicated in red.
- "Variables": In this section, we can view all parameters entered manually or automatically during the blueprint execution.
- "Task": In this section, it is possible to manage the blueprint steps that require manual intervention using the available controls.
- "Subprocess": In this section, we can view the status of all automatic operations performed during the blueprint execution.

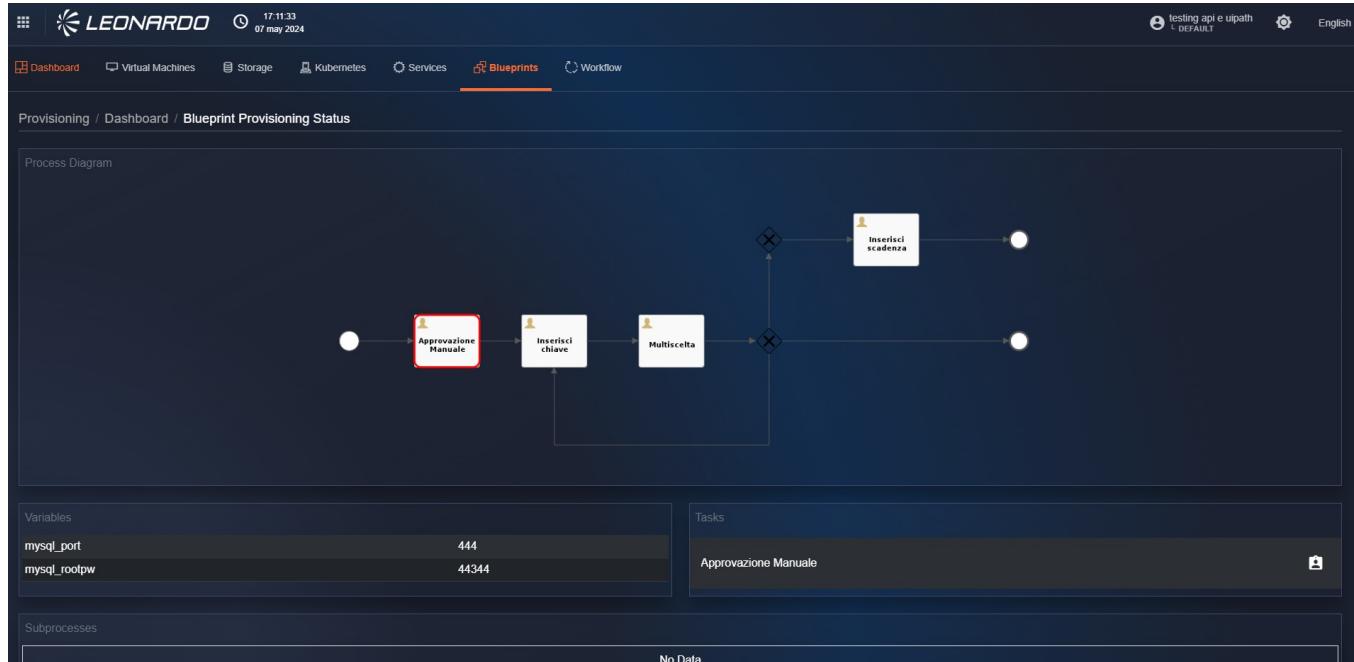

Figura 375 – Provisioning plan flow

The execution, and therefore the corresponding change, between the Blueprint steps can be carried out in two ways: automatically or manually, exactly as described within the Blueprint itself.

11.0.3.4.2.1 Automatic steps

The system automatically manages the creation, configuration of resources, and deployment of applications. The status and result of these steps are visible in the "Subprocess" section below.

For each row in the table, by clicking the buttons on the right, it is possible to verify the generated output message and download its content.

Secure Cloud Management Platform

The screenshot shows the Leonardo Secure Cloud Management Platform interface. At the top, there's a navigation bar with links for Dashboard, Virtual Machines, Storage, Kubernetes, Services, and Workflow. The 'Blueprints' tab is currently selected and highlighted in orange. Below the navigation, there's a table with columns for subnet_name, virtual_machine_name, virtual_network_name, vm_computer_name, and vm_size. The data shown is:

| subnet_name | subnet |
|----------------------|-----------------|
| virtual_machine_name | docker-vm |
| virtual_network_name | vnet |
| vm_computer_name | docker-vm |
| vm_size | Standard_DS1_v2 |

Below this, there's a section titled 'Subprocesses' with a table showing two entries:

| Name | Received Time | Sent Time | Status | Engine | Actions |
|---|---------------------|---------------------|--------|--------|---------|
| Blueprint: 65d7199b5685f7c7a2563d3 process: 668e0f67-f670-11ee-b54c-3e32eeff42d95 | 09/04/2024 12:56:26 | 09/04/2024 14:55:11 | ✓ | A | [Icons] |
| Blueprint: 65d7199b5685f7c7a2563d3 process: 45be1896-f670-11ee-b54c-3e32eeff42d95 | 09/04/2024 12:55:11 | 09/04/2024 14:54:16 | ✓ | B | [Icons] |

At the bottom right of the interface, there are buttons for 'Output Message', 'Items per page 10', '1 - 2 of 2', and 'Close'.

Figura 376 – Blueprint subprocesses
section

11.0.3.4.2.2 Manual steps

Manual tasks, when present and required in the blueprint, will appear in the relevant section. To work on it, it is first necessary to click the "Assign" button (red in the figure) to take charge of the task.

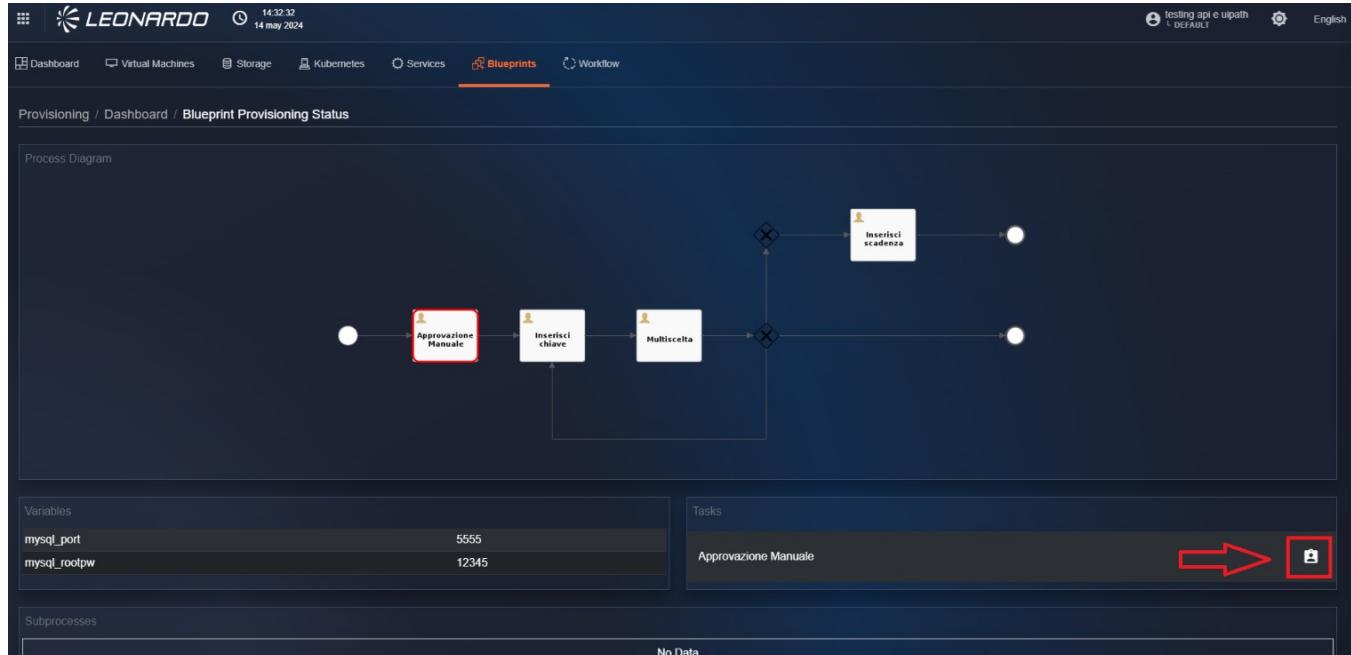

Figura 377 – Task assignment to the user

A confirmation modal for assignment will be displayed. By clicking "Yes", the task will be taken over by the user and cannot be worked on by a different user.

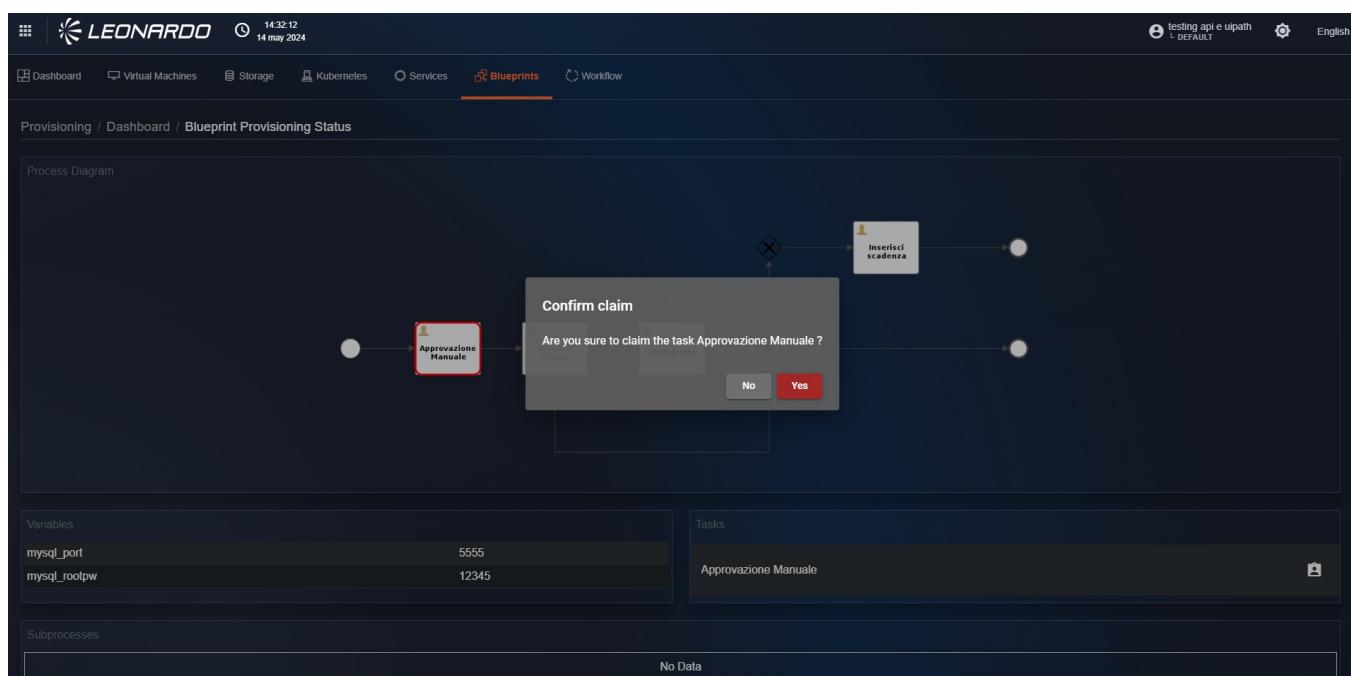

Figura 378 – Assignment confirmation

A confirmation message will appear at the bottom, and we can note that the "Task" section has been updated. On the left, below the task name, the relevant assignee is indicated, and on the right, there are 2 buttons:

- "Remove assignment" (red in the figure).
- "Complete manual task" (yellow in the figure).

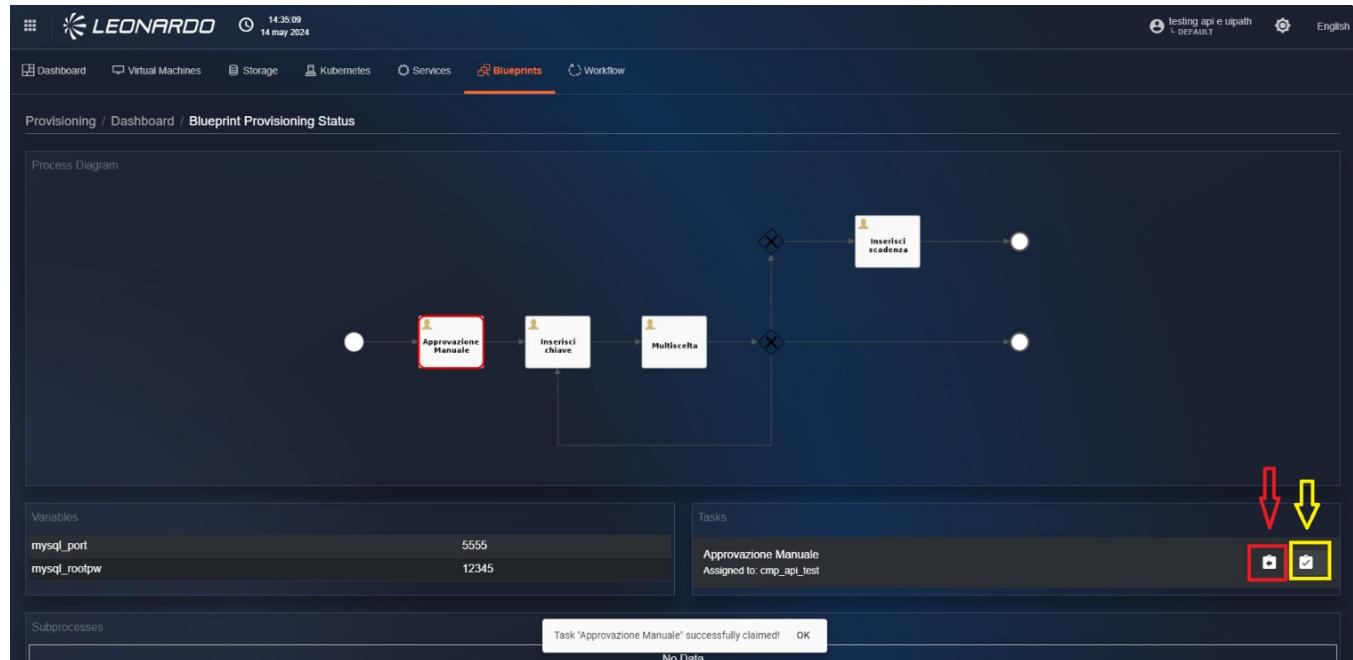

Figura 379 – Task management buttons

Clicking "Remove assignment" will open a confirmation modal. Clicking "Yes" will make the task available to other users who can take charge of it.

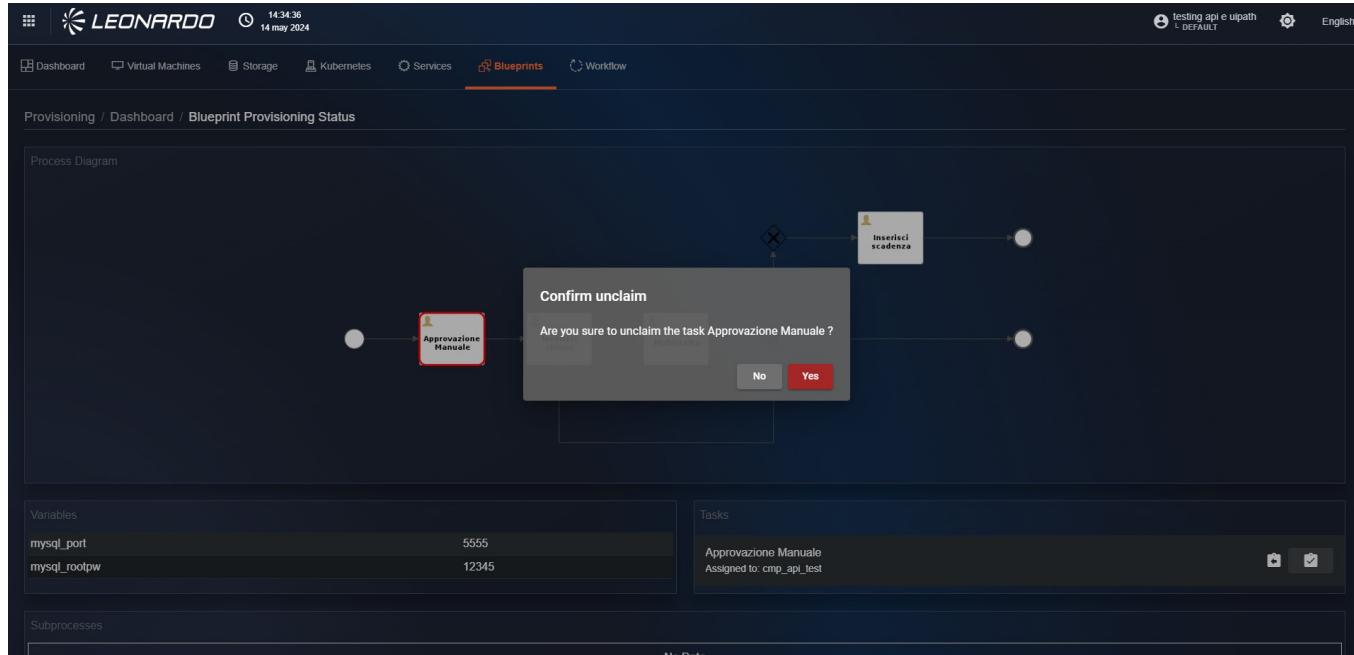

Figura 380 – Task release

Clicking the "Complete task" button will open a modal containing one or more customizable fields. The fields can be of different types.

We can enter numeric, boolean, and text fields. Once entered, it is possible to confirm by clicking the "Continue" button at the bottom right.

Figura 382 – Text fields in Blueprints

Once pressed, we can see that the BPMN graph on the page has been updated and that the next step of the blueprint is active and has a red outline.

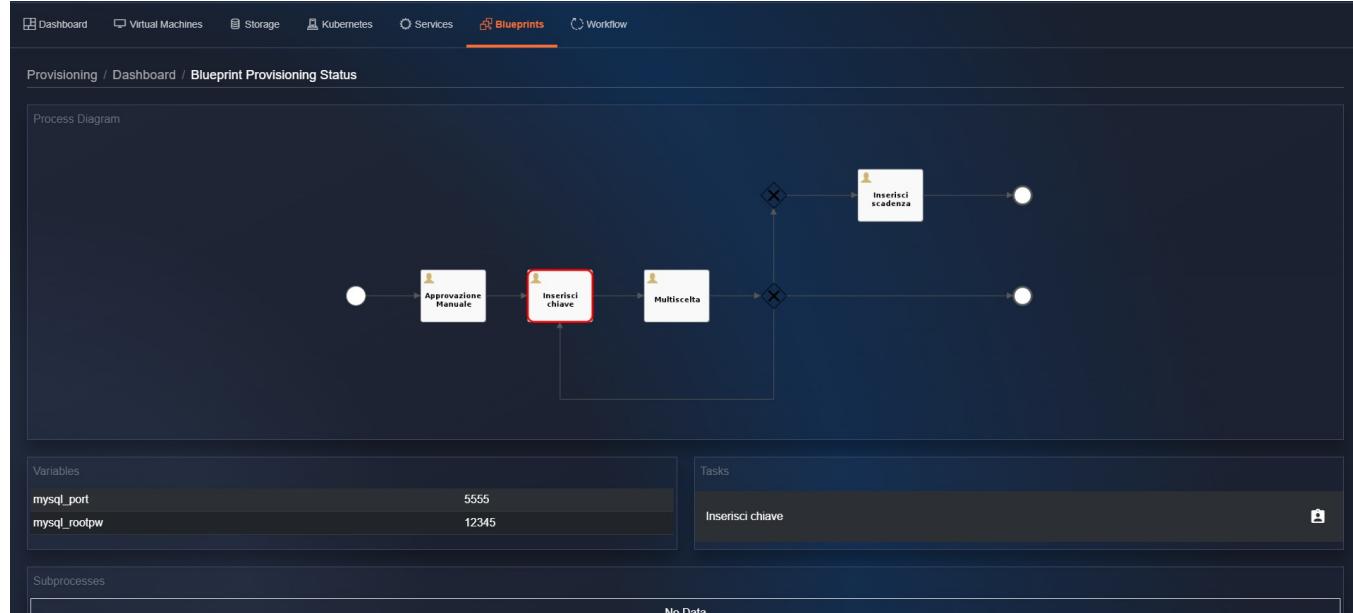

Figura 383 – Next step

All manual tasks present in the blueprint will follow the procedure described previously; therefore, regardless of the type of data to be entered, it is always necessary to assign the task to oneself.

It is possible to insert a temporal field within the manual steps of blueprints, using a calendar it will be possible to manually select the correct day and time.

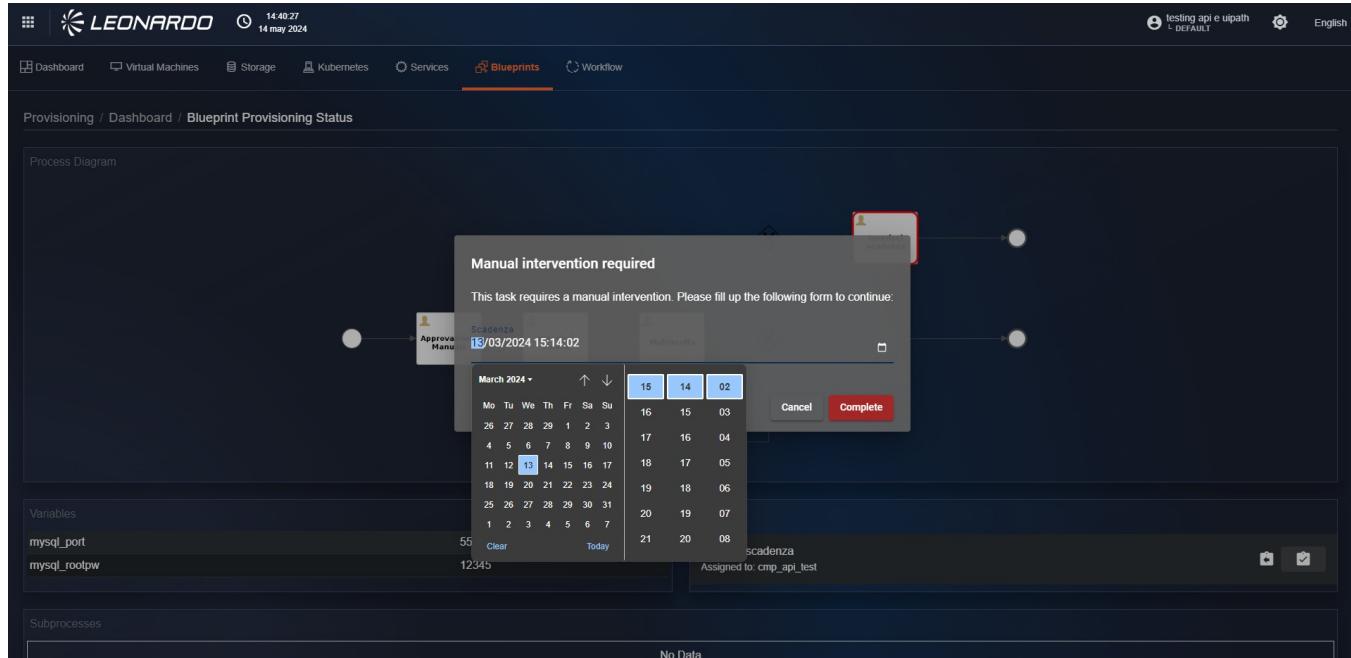

Figura 384 – Date field in tasks

The last type of step that we can find within the blueprints is the "Multi-choice" field. This field allows managing the blueprint's flow.

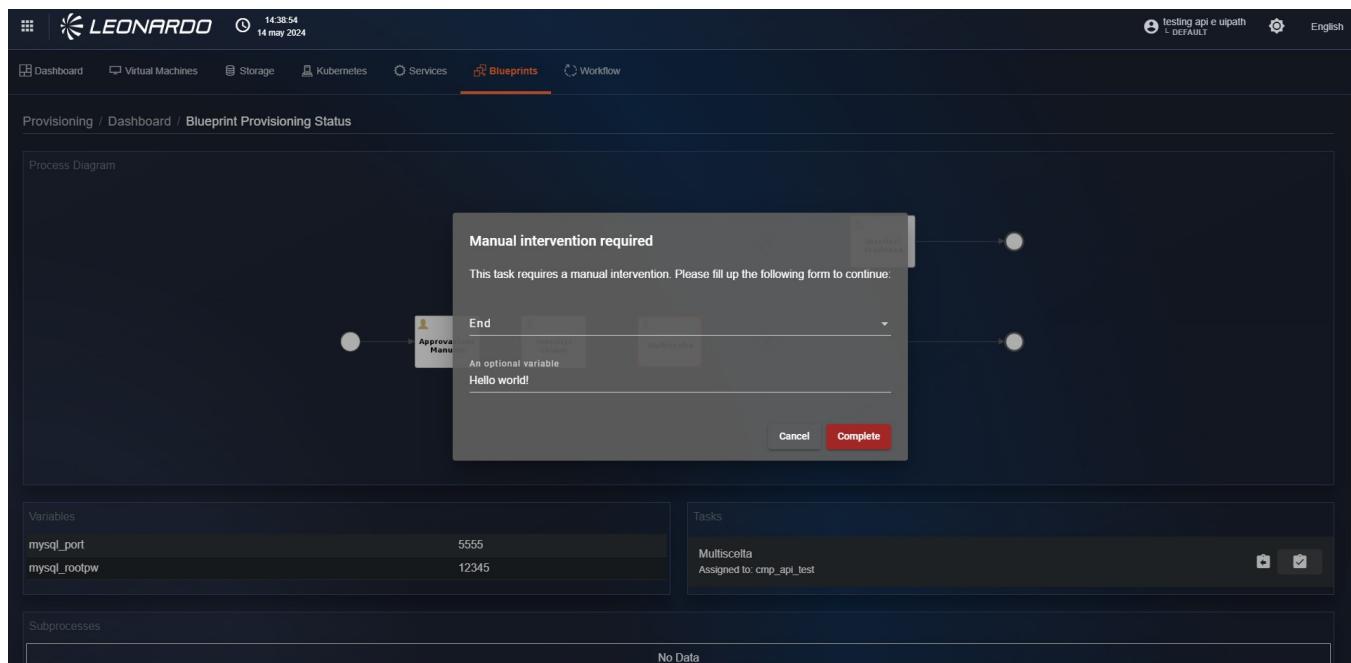

Figura 385 – Multi-choice field

This field is of "Selection" type, so it will not be possible to enter a custom value, but selectable options will be proposed. Specifically, we can find three choices:

- "Repeat": allows re-executing the previous steps as described in the blueprint (path in pink in the figure).
- "End": allows concluding the blueprint execution without performing further operations (path in yellow in the figure).
- "Insert date": allows moving to a subsequent step of the blueprint (path in green in the figure).

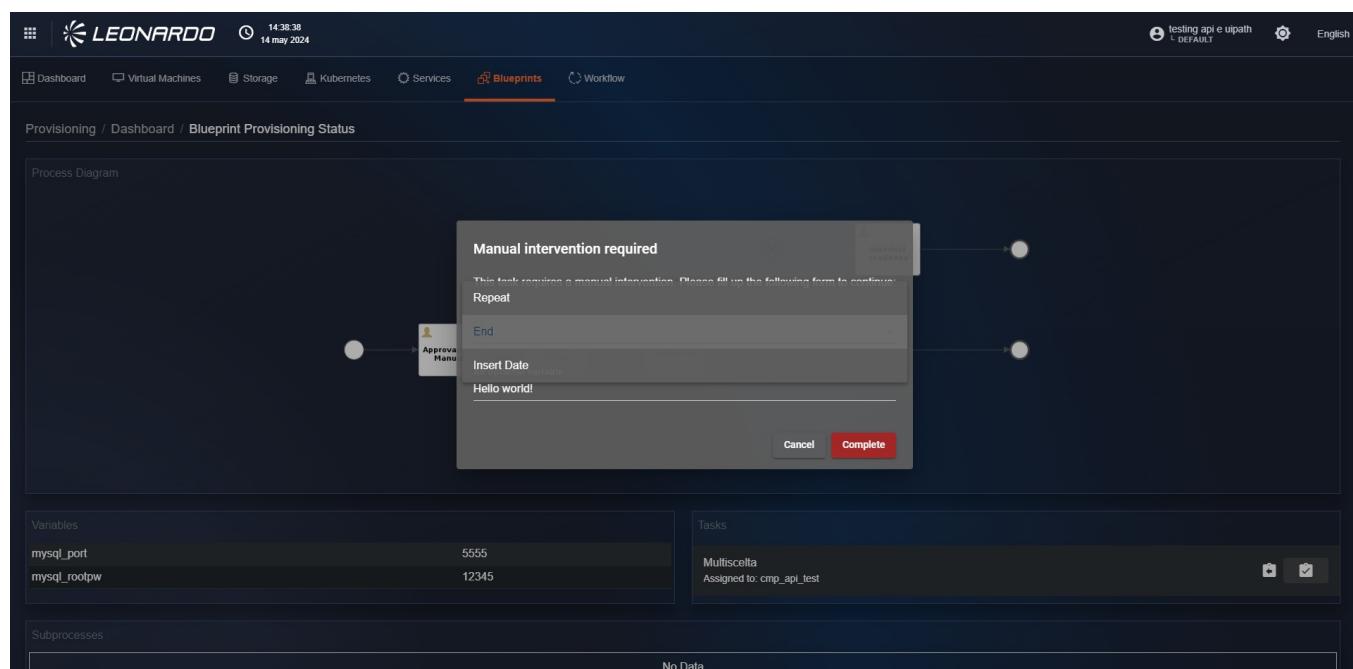

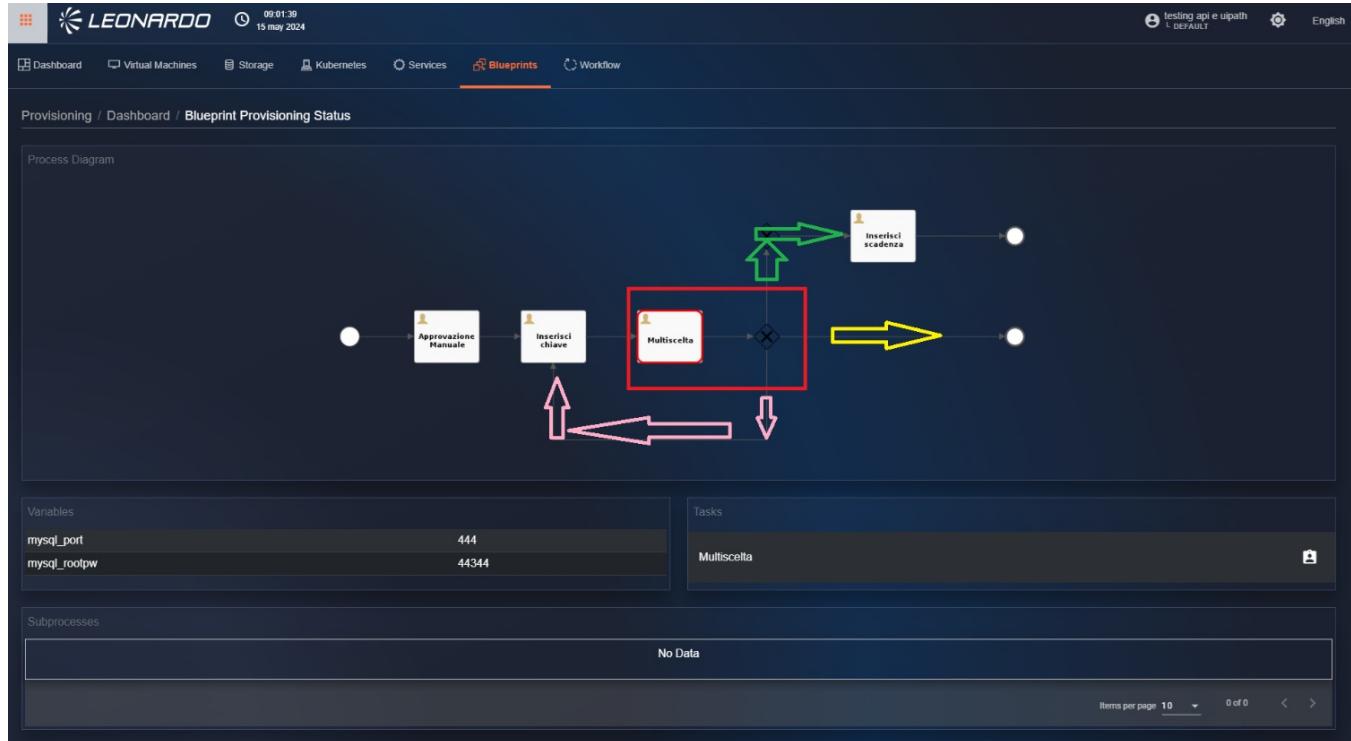

Figura 386 – Multi-choice field values

*Figura 387 – Possible state changes for
Multi-choice*

Once all blueprint steps are completed, the graph will be automatically removed from the page, and in the step section, it will no longer be possible to take charge of an operation. Furthermore, in the "sub-processes" section, we will be able to view the result of all automated steps in the blueprint.

Figura 405 – Menu for Tenant switch

After clicking on “Switch Tenant”, a modal appears where you can select a Tenant to switch to. After selecting the desired Tenant, click on the “Confirm” button.

The system automatically verifies the tenant's enablement and existence before performing the switch.

After doing so, the page updates with the desired Tenant, where you can view all data belonging to it across all platform functionalities.

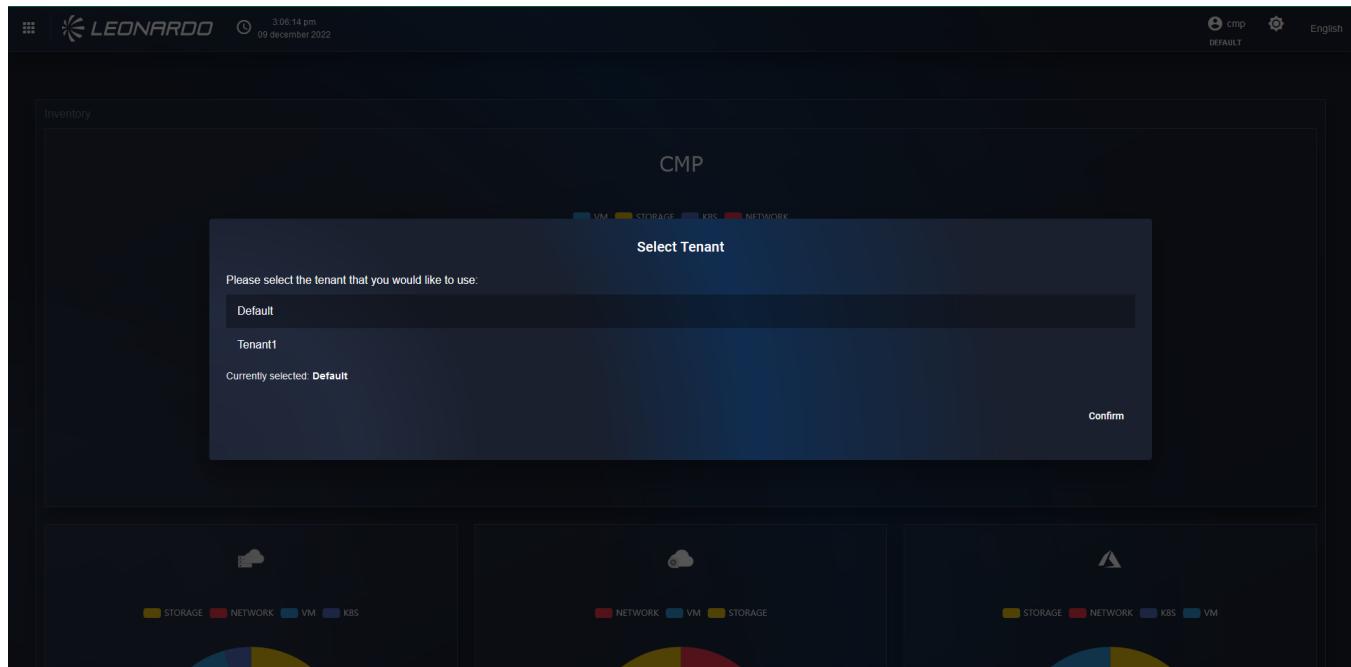

Figura 406 – Tenant Switch

Managing Columns in Available Tables

For the tables available in SCMP, the user has the ability to customize the column display in two ways:

- Modify the order of the displayed columns.
- Change the number of columns shown.

These preferences are saved within the system, using the user identifier and the current page as references.

To customize the display, it is necessary to click on the “filter columns” button, shown with a “funnel” icon, available in the top right section of the respective table.

Secure Cloud Management Platform

The screenshot shows the 'Resources' section of the Leonardo platform. At the top, there's a navigation bar with tabs like 'Resources', 'Virtual Machines', 'Data Stores', etc. Below the navigation is a search bar and a 'Filtering by' dropdown. The main area displays a table of resources with columns: Provider, Name, System, Size, Resource Group, Type, Creation Date, Confidential, Provisioned on, and In Catalog. A red box highlights the 'In Catalog' column header. To the right of the table is a donut chart. A red arrow points from the 'In Catalog' header to a configuration modal window titled 'Columns Options'. Another red arrow points from the 'Search by Subsystem' input field to the same modal.

Figura 407 – Column Management

A configuration modal will open, containing the ordered list of all fields currently displayed on the interface.

We can use the “drag n’ drop” technique by clicking on the “Vertical dots” button corresponding to the field we want to move, then we can release the component in the correct position.

This screenshot shows the 'Resources' section with the 'Columns Options' modal open. The modal lists fields: Provider, Name, System, Size, Resource Group, Type, Creation Date, Confidential, In Catalog, and Status. A red box highlights the 'Provider' field. A yellow box highlights the 'Size' field in the table header. A yellow arrow points from the 'Size' field in the table header to the 'Provisioned on' field in the modal. This illustrates the 'drag n’ drop' technique for reordering columns.

Figura 408 – Column Ordering

Additionally, it is possible to remove a field from the table by clicking on the red “X” corresponding to the field to be deleted; this will be removed from the list and, after saving, will also be removed from the table.

The screenshot shows a table of inventory resources with columns: Provider, Name, System, Size, Resource Group, and Type. A modal window titled 'Columns Options' is open, listing the same columns. Each column has a dropdown menu and a red 'X' button to its right. A red arrow points to the 'X' button next to the 'Provider' column. Below the list are buttons for 'Restore Default' and 'Save'. To the right of the table, there is a donut chart showing resource distribution across various categories like VMs, Storage, Networks, etc.

Figura 409 – Deleting Columns

If we want to add a field to the table, it will be necessary to click the “Add column” button; once pressed, it will be replaced by a “select” field which contains the list of all available fields not already present in the table.

15 Dec 2025

Status updated successfully! OK

Figura 415 – Work order management

page for Service Detail Design

When the “Mark as completed” button is clicked, a window is displayed on the screen where information to be attached to the order can be entered, specifically:

- the result of the processing;
- a description of the chosen result;
- a note for the operator.

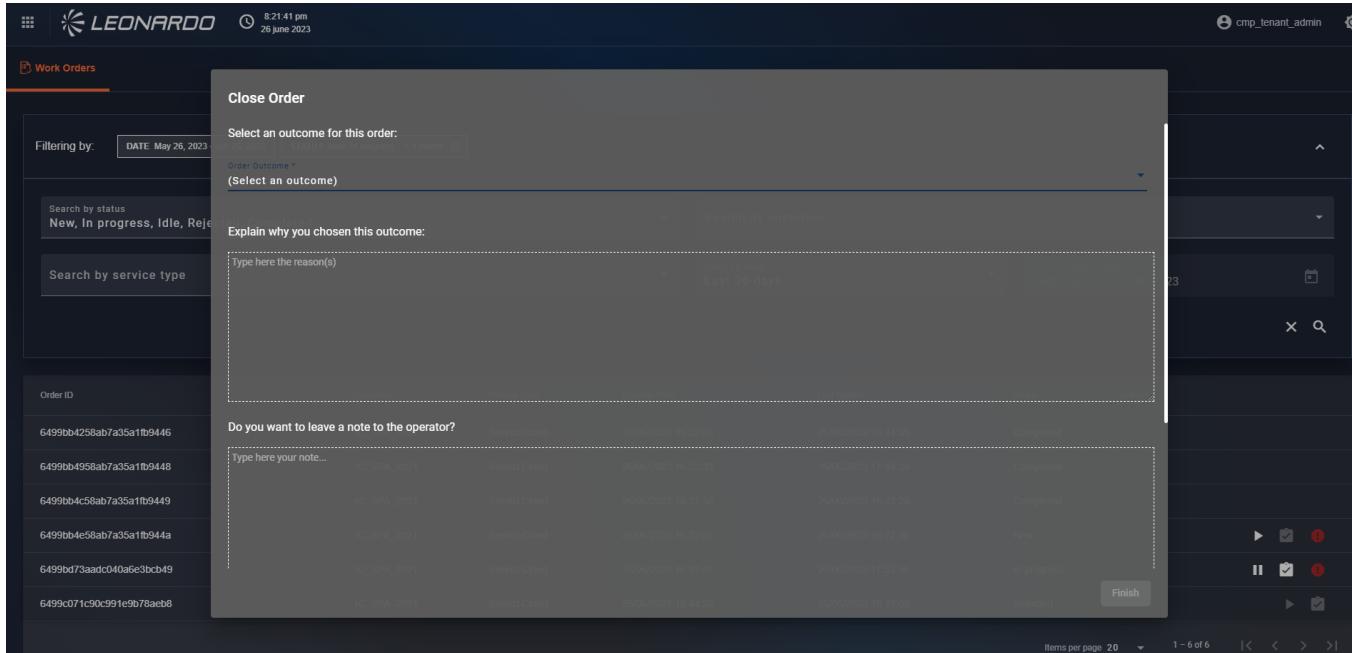

Figura 416 – Closing a Work order

By scrolling down the page, we can find the parameters section where it is possible to enter different key/value combinations for the parameters used during processing.

After entering the key and value, click the “Plus” button to confirm the entry; new empty fields are added where additional parameters can be entered. To delete a key/value pair, click the “Minus” button; once all parameters have been entered, click the “Finish” button.

15 Leonardo Services

Leonardo provides several managed services which are represented in the following figure by type (called service families).

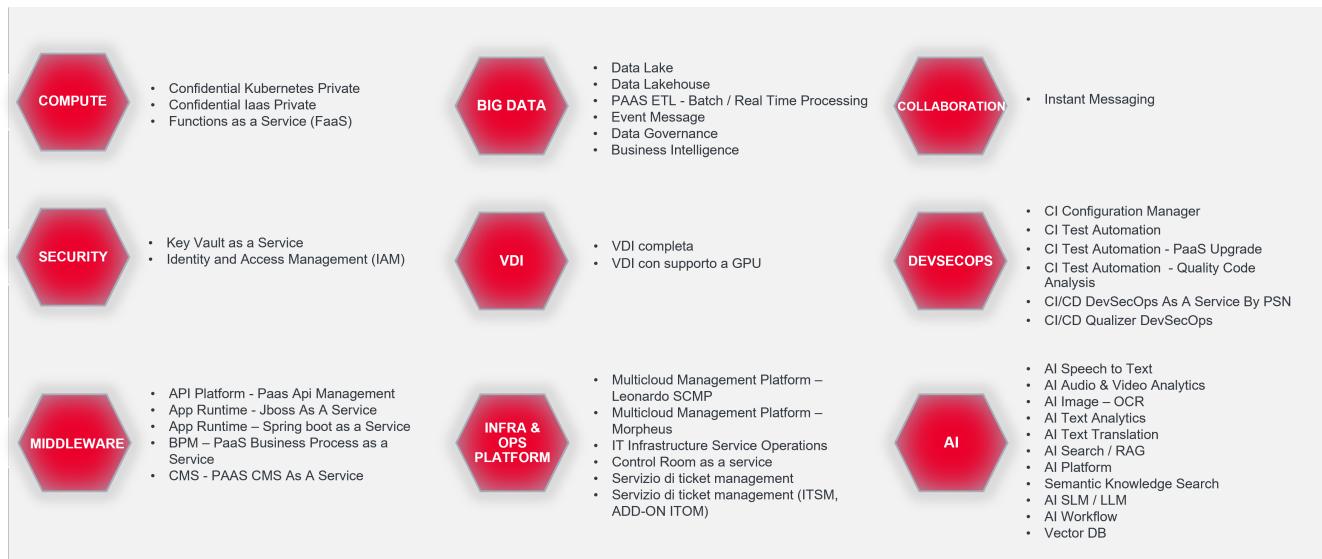

Figura 419 – Overview Leonardo Services

From a logical-functional point of view, the services can be divided into three macro-categories:

- Infrastructure as a Service (IaaS) Services
- Container as a Service (CaaS) Services
- Platform as a Service (PaaS) Services

The IaaS and CaaS categories include some services from the "Compute" family. The PaaS category includes services from all other families.

The aforementioned macro-categories will be described below.

15.1 Infrastructure as a Service (IaaS) Services

In the following table, you can consult the services pertaining to the Infrastructure as a Service (IaaS) category.

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|--------|------------|----------------------|
| | | |

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|---------|-------------------------------|---|
| Compute | Confidential - IaaS - Private | - Pool Small (Confidential) - Pool Medium (Confidential) - Pool Large (Confidential) - Pool X-Large (Confidential) |

15.1.1 Compute

Below are the sub-families pertaining to the Compute family: - Confidential - IaaS - Private

15.1.1.1 Confidential - IaaS - Private

Below is the list of services pertaining to the Confidential - IaaS - Private sub-family:

- Pool Small (Confidential)
- Pool Medium (Confidential)
- Pool Large (Confidential)
- Pool X-Large (Confidential)

"Service Description"

The services allow for the provision of virtual computational environments (IaaS) of Private type, i.e., on a pool of physical resources, dedicated and isolated for each individual client, based on the use of "bare metal" compute instances. The data of the physical resources are encrypted and kept protected in all phases of their use (At-Rest, In-transit & In-use), leveraging the Confidential Computing paradigm. Depending on the pool of computational resources required for each individual Administration, it is possible to choose the most suitable service from the four available types.

"Service Features and Benefits"

Private Cloud resources are exclusively dedicated to each client. The services use secure Enclaves based on Trusted Execution Environment (TEE) leveraging HW Confidential, which offer an advanced level of security for data in use, protecting them during processing. They support advanced data encryption at Rest, in Transit & in Use. They use advanced Remote Attestation systems to verify the correctness of the TEE environment, isolating the memory of virtual machines from the host operating system and other malicious guests.

The advantages offered by the services are:

- Security and confidentiality of data in dedicated environments;
- Workload isolation through advanced virtualization;
- Dedicated firewalls and network micro-segmentation;

- Automated provisioning and rapid resource management;
- Total control and centralized governance: centralized monitoring and auditing for traceability.

15.2 Container as a Service (CaaS) Services

In the following table, you can consult the services pertaining to the Container as a Service (CaaS) category.

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|---------|-------------------------------------|-----------------------------------|
| Compute | Confidential - Kubernetes - Private | Kubernetes Confidential Computing |

15.2.1 Compute

Below are the sub-families pertaining to the Compute family: - Confidential - Kubernetes - Private

15.2.1.1 Confidential - Kubernetes - Private

Below is the list of services pertaining to the Confidential - IaaS - Private sub-family:

- Kubernetes Confidential Computing

"Service Description" Service that allows the provision of a platform for the orchestration of private and secure containers, designed to manage containerized applications in highly regulated environments or with confidentiality requirements. It offers a secure and controlled Kubernetes environment where the security component is one of the main aspects of the solution. The operating system on which the solution is based is hardened, to minimize the attack surface and potential vulnerabilities. Within the architectural components of the solution, mechanisms are used to ensure data security even during communication phases (through encryption mechanisms applied by default to communications between platform components) and for data stored within the platform itself. The platform can be customized to adapt to the specific needs of each Organization, ensuring integration with existing corporate systems and applications.

"Service Features and Benefits" Its implementation requires a combination of hardware certified for Confidential Computing, a security-hardened private Kubernetes infrastructure, and a set of observability and governance tools to maintain total control over the container lifecycle. Included functionalities:

- *Data protection* → the operating system is configured to ensure protection in all its phases: data in memory, through full disk encryption and key rotation; data in transit, using secure and encrypted communication protocols; data in use, adopting Confidential Computing practices and secure execution environments.
- *Secure Enclaves* → apply isolation and encryption, ensuring that only authorized parties can access the data.
- *Trusted Execution Environments (TEE)* → add a secure processing environment, protecting data from external

threats.

Being a managed Kubernetes solution, the client will not have to deal with infrastructure management and its complexity, as the infrastructural layer is managed by Leonardo throughout the service lifecycle.

The advantages offered are:

- Security and confidentiality of containerized applications: end-to-end encryption, confidential computing for workloads, container isolation on dedicated nodes with hardware-based protection, integrated security policies, and advanced RBAC;
- Centralized control and governance of clusters;
- Scalability and flexibility;
- Integration with multicloud and legacy environments.

15.3 Platform as a Service (PaaS) Services

In the following table, you can consult the services pertaining to the Platform as a Service (PaaS) category.

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|----------------------|-----------------------|--|
| Compute | FAAS | Functions as a Service |
| Security | IAM | Identity & Access Management Service |
| Security | Key Management | Key Vault as a Service |
| Middleware | API Platform | PaaS API Management |
| Middleware | APP Runtime | Jboss as a Service |
| Middleware | APP Runtime | Spring boot as a Service |
| Middleware | BPM | PaaS Business Process as a Service |
| Middleware | CMS | PaaS CMS as a Service |
| Middleware | ETL | PaaS ETL - Batch / Real Time Processing - 1 worker |
| Infra & Ops Platform | Multicloud Management | Multicloud Management Platform-Leonardo SCMP |
| Infra & Ops Platform | Multicloud Management | Multicloud Management Platform-Morpheus |

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|----------------------|----------------------------|---|
| Infra & Ops Platform | Observability-Infra | Control Room as Service |
| Infra & Ops Platform | Observability-Infra | IT infrastructure Service Operations (Logging & Monitoring) |
| Infra & Ops Platform | TTM | PaaS Ticket Management Service |
| Infra & Ops Platform | TTM | PaaS Ticket Management Service (ITSM) |
| Infra & Ops Platform | TTM | PaaS Ticket Management Service (ADD-ON ITOM) |
| DevSecOps | CI | Configuration Manager |
| DevSecOps | CI | Test Automation |
| DevSecOps | CI | Quality Code Analysis |
| DevSecOps | CI/CD | DevSecOps As A Service By PSN |
| DevSecOps | CI/CD | Qualizer DevSecOps |
| Big Data | Data Lake | Data Lake - 1TB |
| Big Data | Data Lakehouse | Data Lakehouse |
| Big Data | Business Intelligence | Business Intelligence |
| Big Data | ETL | Batch/Real time Processing - 1 Worker |
| Big Data | Event Platform | Event Message |
| Big Data | Data Governance | Data Governance |
| AI | AI - Audio & Conversations | Speech to Text |
| AI | AI - Image | OCR |
| AI | AI - Text | AI Search - AI Search - RAG - 10 GB - 1 worker |
| AI | AI - Text | Text Analytics |
| AI | AI - Text | Translation |
| AI | AI - Generative | AI SLM/LLM |

| FAMILY | SUB-FAMILY | SERVICE NOMENCLATURE |
|---------------|-----------------|----------------------|
| AI | AI - Tools | AI workflow |
| AI | AI - Tools | Vector DB |
| AI | AI - Tools | AI Platform |
| VDI | Virtual Desktop | VDI |
| VDI | Virtual Desktop | VDI with GPU Support |
| Collaboration | Communication | Instant Messaging |

15.3.1 Compute

Below are the sub-families pertaining to the Compute family: - FAAS

15.3.1.1 FAAS

Below is the list of services pertaining to the FAAS sub-family:

- Functions as a Service

"Service Description"

FaaS (Function as a Service) is a system design model, event-driven, executed on stateless containers, where developers create, deploy, and run small, independent functions to perform specific tasks without worrying about the underlying infrastructure. The adoption of FaaS allows for the standardization of application development and execution, centralizing cross-functional capabilities such as orchestration, automatic provisioning, monitoring, integrated service management, and event-driven flow control. It offers tools for:

- centrally manage serverless functions;
- automate component lifecycle management;
- enable multi-cloud and hybrid cloud portability;
- support innovation with GPU runtimes and dedicated AI tools. The FaaS platform provides and scales underlying resources based on demand. It is ideal for highly dynamic scenarios, with variable workloads, and integrates seamlessly with microservices and event-driven architectures.

"Service Features and Benefits" The service is not limited to providing an execution engine, but offers a complete ecosystem, composed of:

- *Serverless execution* → stateless functions and event-driven workflows, scalable and available in various

programming languages.

- *Portability and independence* → executable on any Kubernetes cluster, multi-environment, without lock-in constraints.
- *Security and compliance* → data protection and centralized access management.
- The solution allows organizations to adopt a modern and flexible model, reducing operational complexity and benefiting from a standardized and easily accessible service.

The service is delivered via Apache OpenServerless, an open-source, cloud-agnostic serverless platform based on Apache OpenWhisk as a Function-as-a-Service (FaaS) engine.

The advantages offered are:

- *Reduction of operating costs* → you only pay for the actual use of the functions;
- *Flexibility and scalability* → resources adapt to demand;
- *Operational efficiency* → elimination of direct server management, patching, and updates;
- *High availability* → integrated redundancy and fault tolerance, ensuring high availability of functions even in the event of hardware failures or other interruptions;
- *Accelerated time-to-market* → rapid release of new functionalities without worrying about the infrastructure;
- *Development agility* → focus on code and business logic, not on server management;
- *Continuous innovation* → rapid experimentation with new low-cost services;
- *Competitive advantage* in cost and speed compared to traditional hosting models.
